DIMENSIONS

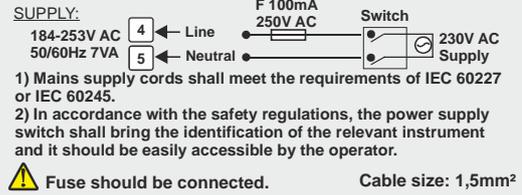

For removing mounting clamps :

- Push the flush-mounting clamp in direction 1 as shown in the figure left.
- Then, pull out the clamp in direction 2.

Note :

- 1) Panel thickness should be maximum 7mm.
- 2) There must be at least 60mm free space behind the device, otherwise it would be difficult to remove it from the panel.

NOTE :

Equipment is protected throughout by DOUBLE INSULATION

Holding screw 0.4-0.5Nm.

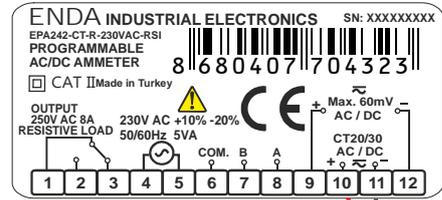

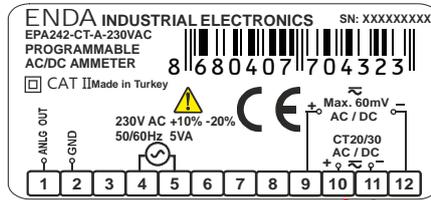

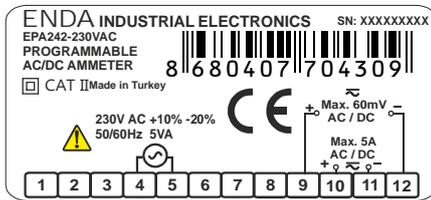

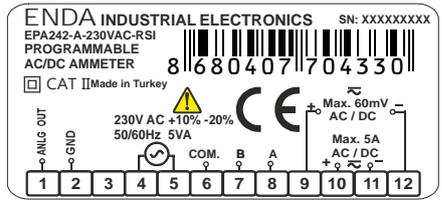

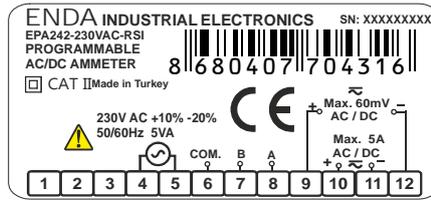

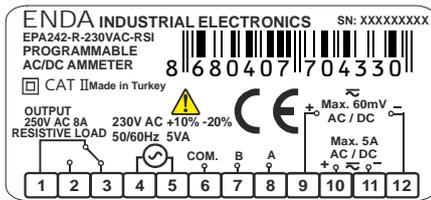

CONNECTION DIAGRAM

ENDA EPA242 is intended for installation in control panels. Make sure that the device is used only for intended purpose. The electrical connections must be carried on by a qualified staff and must be according to the relevant locally applicable regulations. During an installation, all of the cables that are connected to the device must be free of electrical power. The device must be protected against inadmissible humidity, vibrations and severe soiling. Make sure that the operation temperature is not exceeded. The cables should not be close to the power cables or components.

CAUTION :

If 5A / CT20-30 and 60mV inputs are connected at the same time, the measurement will be incorrect.
