

### **Linear measuring technology**

Incremental magnetic measurement system sensor head, magnetic band

Limes LI20 / B1

Resolution min. 10 µm

The non-contact incremental magnetic linear measurement system Limes LI20 / B1 - made up of the sensor head LI20 and of the magnetic band B1 - reaches a resolution up to 10  $\mu m$  with a maximum distance of 1 mm between the sensor and the band.

For outdoor use with extremely sturdy aluminum housing and stainless-steel cover, wide temperature range as well as a UV-resistant cable. IP68 / IP69k protection, special encap-sulation technology and tested resistance to cyclic humidity and damp heat offer the highest levels of reliability, even in exposed outdoor use.

High protection

SHOCK

Reverse polarity

#### **Robust**

- Sturdy housing with IP67 protection.
   Option: special housing for maximum resistance against condensation (IP68 / IP69k, resistance to cyclic humidity acc. to EN 60068-3-38 as well as damp heat acc. to EN 60068-3-78).
- Non-contact measuring system free from wear.
- · Masking tape protecting the magnetic band.

#### **Easy installation**

- · Simple glued assembly of the magnetic band.
- · Large mounting tolerances.
- Requires very little installation space.
- Warning signals via LED if the magnetic field is too weak.

#### **Function principle**

#### Signal figures

- 1 Pulse edge interval: Pay attention to the instructions in the technical data
- 2 Periodic index signal every 2 mm [0.08"]; the logical assignment A, B and 0-signal can change

- If power supply correctly applied.
   Only one channel allowed to be shorted-out. If +V = 5 V, short-circuit to channel, 0 V, or +V is permitted.

  If +V = 5 ... 30 V, short-circuit to channel or 0 V is permitted.

  3) At every pole change. The signal is generated by the sensor.
- 4) At the listed rotational speed the min. pulse edge interval is 1 µs, this corresponds to 250 kHz. For the max. rotational speed range a counter with a count input frequency of not less then 250 kHz should be provided.
