

AmpFlex® A110, A130 & MiniFlex® MA110, MA130, MA200

Flexible single and three-phase current sensors

**Flexibility for all
your current
measurements**

4 measurement calibres for better resolution

Measurements up to 30 kA_{AC}

Excellent linearity and low phase shift

Long battery life: 300 hours for single-phase models,
500 hours for three-phase models

Deactivatable automatic standby function

Power supply by batteries and standard external adapter

1000 V
CAT IV

600 V
CAT IV

IP
67

Measure up

Compact and lightweight, with small or large diameters, the **MiniFlex®** and **AmpFlex®** models can encircle all types of conductors, whatever their dimensions or shapes (busbars, cable strands, etc.).

Their flexibility means they can be used comfortably wherever you are and whatever the space available. They are easy to set up in any residential or industrial electrical cabinets. They are also ideal for the needs of both the industrial and tertiary sectors and for measurements on single or three-phase installations.

The new MiniFlex® MA110 and MA130 sensors and AmpFlex® A110 and A130 sensors are

equipped with an automatic standby function which can be deactivated at start-up for long-term measuring campaigns.

They can now be powered in two ways: either by batteries or by an external power supply (standard µUSB socket). On the control unit, the 3 LEDs (green, yellow and red) indicate, respectively, the battery status, the status of the automatic standby function and any measurement capacity overshoots. The single-phase versions offer 4 measurement calibres, while the three-phase versions offer 3.

PRINCIPLE OF ROGOWSKI COILS

These AmpFlex® and MiniFlex® are based on the "Rogowski coil" backed by electronics in a control unit.

Because there are no magnetic circuits, these sensors are particularly lightweight and flexible. This also means there is no saturation effect or risk of overheating.

This specific feature ensures excellent linearity and low phase shift.

APPLICATIONS

AmpFlex® and MiniFlex® sensors are ideal for applications in a wide range of sectors:

- maintenance and repair teams in industry,
- energy distribution, transmission and production companies
- transport companies (rail, etc.)
- laboratories and test departments, R&D
- certification organizations

MiniFlex® models

The **MA 110** models perform measurements from 80 mA upwards after connection to the mV_{AC} / V_{AC} input of any multimeter or measuring instrument equipped with banana plugs. The **MA 130** is specially designed for use on three-phase networks. It can be hooked up to the mV_{AC} / V_{AC} inputs of any power analyser, logger or measuring instrument.

AmpFlex® models

The length of this series' sensors (up to 120 cm as standard) means you can encircle thick cables or several conductors simultaneously. The A110 models can be used for current measurements up to 30 kA_{AC}.

MiniFlex® MA 200

The MA200 Series is a family of "high-frequency" flexible sensors designed for viewing and measuring electrical or electrotechnical currents with significant variations and amplitudes.

These "isolated current probes for oscilloscopes" offer a bandwidth of 1 MHz and can be used to analyse complex-shaped currents and transients present in electronic power supplies, welding stations, etc.

TECHNICAL SPECIFICATIONS

	Measurement range	Sensor length	Clamping Ø	Calibres (A/V)	Bandwidth	Sensor-processing unit link	Output cable connection	Processing unit dimensions	Weight	References	
MA110	0.08 A to 3,000 A	17 cm	4,5 cm	3-30-300-3,000/3	10 Hz ... 20 kHz	2 m cable	Cable 0.5 m long terminated by 2 x Ø 4 mm isolated male banana plugs	120 x 58 x 36 mm (overall)	300 g approx.	P01120660

OUR EXPERTISE: TAILORED PRODUCTS

Our long experience enables us to design, develop and manufacture specific models to fit your requirements in terms of **sensitivity (mV/A), connections, sensor lengths, etc.**

The AmpFlex® A101 and MiniFlex® MA101 Series are sensors designed for professionals and for measuring instrument manufacturers seeking to integrate this technology in their assemblies or sub-assemblies.
