Pilot Lamp

Product Overview

This series pilot lamp only use LED lamp as the light source. The advantage have: long life, gentle weight, smallecubag, save energy. It is the advanced product of all kinds of the incandescence lamp and the neon lamp of the XD type. The cover of the lamp is made of PC material, and have good shock resistance. It can be used as indication pilot light, accident signal and other signals in the circuits of such equipment as telecommunication.

 $Note: 1, AC/DC\ type\ pilot\ lamp\ is\ resistor\ step-down\ form;\ AC\ type\ pilot\ lamp\ is\ capacitor\ step-down\ form.$

2, When voltage is 110V or above it, The temperature of outer shell of AC/DC type pilot lamp is higher than AC type pilot lamp.

Attentions

- 1, The frequency of AC type pilot lamp is $50 \sim 60$ Hz. If work in other frequency ranges, it will be broken .
- 2,The common threshold value of anti-interference pilot lamp is below 40V; and if you need higher threshold value please tell us.

If you need to weld, please finish it in 3 seconds by the electric iron which is below 30W and don't exert external force on terminals. We suggest that the threshold value shouldn't be too high. Please check the routing If the interference voltage is too high.

- 3, Connection error is not allowable to AC type dual-color light, otherwise pilot lamp will be broken.
- 4, Avoid using welding mode to connect lines as possible and you should using general plug (2.5 × 0.8 mm) to conect and wear the protective sleeve.
