

ECONOLINE - DC/DC-Converter

RS Series, 2 Watt, SIP8, Regulated, Isolated (Single Output)

NEW

RECOM

Features

- 2:1 Wide Range Voltage Input
- 1kVDC Isolation
- Efficiency up to 85%
- UL 94V-0 Package Material
- 0.05% Line Regulation
- Continuous Short Circuit Protection with Current Foldback
- Low Noise

Selection Guide

Package Style and Pinning (mm)

8 Pin SIP Package Style

Pin Connections

Pin #	Single	Description
1	GND	Negative input
2	+Vin	Positive input
3	CTRL	Control input (can be left open)
5	NE	No external connection allowed
6	+Vout	Positive output
7	-Vout	Negative output
8	CS	Optional external capacitor

Tolerance: $\pm 0.25\text{mm}$

Recommended Footprint Details

Control Pin Input Current: 10mA

Voltage Set Point Accuracy with external input/output capacitors refer to recommended test circuit: typ. $\pm 1\%$ max. $\pm 2\%$

Control Pin (CTRL) Input Current, control voltage applied via 1K resistor, output voltage must reduce to 0V: typ. 3mA max. 6mA

External capacitance

Although these converter will work without external capacitors, they are necessary in order to guarantee the full parametric performance over the full line load range. All parts have been tested and characterised using the following recommended values and test circuit.

Cin	All RS-XXXX types 10uF, 100V Philips Part No. 15162109
Cout	100uF, 25V Philips Part No. 13556101

Pin 3 (CTRL)

This pin provides an Off function which puts the converter into a low power mode. When the pin is 'high' the converter is OFF and when the pin is high 'Z' the converter is ON. There is no allowed low state for this pin. Voltage to be applied via a limiting resistor with a recommended value of 1K for RS-05xx; 3.3K for RS-12xx; RS-24xx and 10K for RS-48xx)

Pin 5 (NE)

This pin is used internally and must have no external connection.

Pin 8 (Cs)

This pin provides a connection point to the main reservoir capacitor. Additional capacitance can be added from this to pin 7. Any low esr capacitor will improve ripple and noise in some measure. The benefit of this access point over simple additional output filter inductor. Maximum values of external capacitance will depend on the output voltage/loading of the converter and the desired ripple figure. Starting values can be in the range of 100uF.
