## **ASMT-Mxx4**

# Moonstone® 1W High Brightness Power LED Light Source

# **Data Sheet**

## **Description**

The Moonstone® 1W High Brightness Power LED Light Source is a high performance energy efficient device which can handle high thermal and high driving current. The exposed pad design has excellent heat transfer from the package to the motherboard.

The low profile package design is suitable for a wide variety of applications especially where height is a constraint.

The package is compatible with reflow soldering. This will give more freedom and flexibility to the light source designer.

The 1W Power LED light source can be mounted onto metal core PCB enabling optimum heat dissipation and ease of installation.

## **Applications**

- Sign backlight, billboard illumination or backlight
- Exit sign or emergency sign lightings
- Commercial lightings
- · Accent and marker lightings
- Pathway lighting
- Task lighting
- Reading lights
- Decorative lighting
- Garden lighting
- Architectural lighting
- Portable (flash light, bicycle head light

#### **Features**

- Available in Cool White & Warm White color
- Energy efficient
- Exposed pad for excellent heat transfer
- Suitable for reflow soldering process
- High current operation
- · Long operation life
- Wide viewing angle
- Silicone encapsulation
- Non-ESD sensitive (threshold > 16KV)
- MSL 2a products

#### **Specifications**

- InGaN Technology
- 3.5 V (max) at 350 mA
- 110° viewing angle

## Package Dimension for Moonstone®

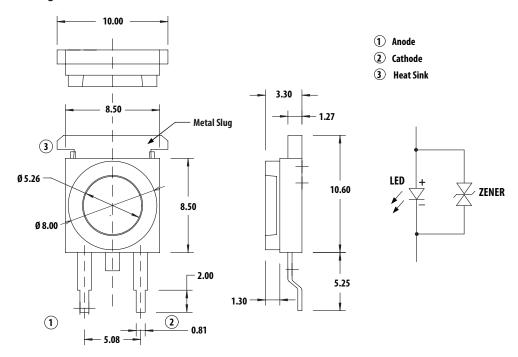

Figure 1. Moonstone® package outline drawing.

- 1. All dimensions are in millimeters.
- 2. Tolerance is  $\pm 0.1$  mm unless otherwise specified.
- 3. Terminal finish: Ag plating.

## Package Dimension for Moonstone® on MCPCB

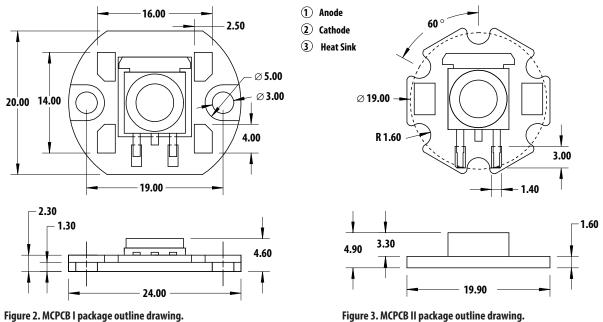

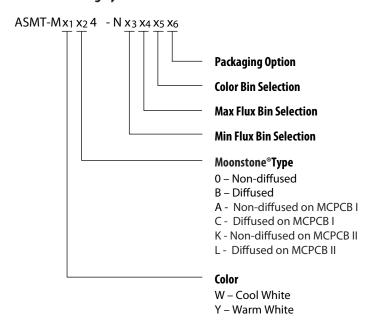

Figure 2. MCPCB I package outline drawing.

- 1. All dimensions in millimeters.
- 2. Tolerance is  $\pm 0.1$  mm unless otherwise specified.

## **Part Numbering System**

#### Note:

1. Please refer to Page 9 for selection details.

## Device Selection Guide $(T_j = 25^{\circ}C)$

Part	Luminous Flux, Φ <sub>V</sub> <sup>[1,2]</sup> (lm)				Test Current	Dice	Electrically Isolated
Number <sup>[3]</sup>	Color	Min.	Тур.	Max.	(mA)	Technology	Metal Slug
ASMT-MWx <sub>2</sub> 4-NLN00	Cool White	73.0	105.0	125.0	350	InGaN	Yes
ASMT-MWx <sub>2</sub> 4-NMN00	_	95.0	105.0	125.0	350		Yes
ASMT-MYx <sub>2</sub> 4-NLM00	Warm White	73.0	100.0	110.0	350	InGaN	Yes
ASMT-MWx <sub>2</sub> 4-NLM00	Cool White Diffused	73.0	95.0	110.0	350	InGaN	Yes
ASMT-MYx <sub>2</sub> 4-NLM00	Warm White Diffused	73.0	90.0	110.0	350	InGaN	Yes

#### Notes:

- 1.  $\Phi_V$  is the total luminous flux output as measured with an integrating sphere at 25ms mono pulse condition.
- 2. Flux tolerance is  $\pm 10$  %.
- 3. Flux performance for respective part number is similar when device on MCPCB I or MCPCB II.

## Absolute Maximum Ratings ( $T_A = 25$ °C)

Parameter	ASMT-Mxx4	Units
DC Forward Current [1]	350	mA
Peak Pulsing Current	1000	mA
Power Dissipation	1225	mW
LED Junction Temperature	125	°C
LED Junction Temperature for short term application	145	°C
Operating Ambient Temperature Range	-40 to +110	°C
Storage Temperature Range	-40 to +120	°C
Soldering Temperature	Refer to Figure 14	
Reverse Voltage [2]	Not recommended	

#### Notes:

- 1. Derate linearly based on Figure 11.
- 2. Not recommended for reverse bias operation.

# Optical Characteristics at 350 mA ( $T_J = 25$ °C)

		Correlated Color Temperature, CCT (Kelvin)		Viewing Angle, 20½ <sup>[2]</sup> (°)	Luminous Efficiency (lm/W)
Part Number	Color	Min.	Max.	Тур.	Тур.
ASMT-MWx <sub>2</sub> 4-NLN00	Cool White	4000	10000	110	94
ASMT-MWx <sub>2</sub> 4-NMN00	_	4000	10000	110	94
ASMT-MYx <sub>2</sub> 4-NLM00	Warm White	2600	4000	110	89
ASMT-MWx <sub>2</sub> 4-NLM00	Cool White Diffused	4000	10000	110	85
ASMT-MYx <sub>2</sub> 4-NLM00	Warm White Diffused	2600	4000	110	80

### Notes:

## Electrical Characteristic at 350 mA ( $T_J = 25$ °C)

	Forward V	Forward Voltage $V_F$ (Volts) at $I_F = 350$ mA		Thermal Resistance Rθ <sub>j-ms</sub> ( °C/W) [1]
Dice type	Min.	Тур.	Max.	Тур.
InGaN	2.8	3.2	3.5	10

#### Note

<sup>1.</sup>  $\theta$ ½ is the off-axis angle where the luminous intensity is ½ the peak intensity.

<sup>1.</sup>  $R\theta_{\text{j-ms}}$  is the Thermal Resistance from LED junction to metal slug.

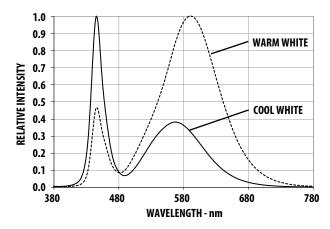

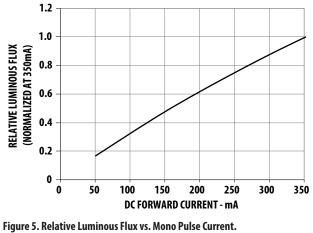

Figure 4. Relative Intensity vs. Wavelength.

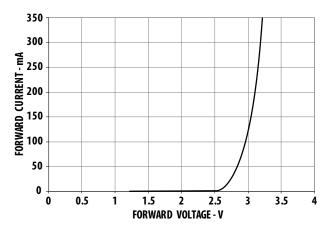

Figure 6. Forward Current vs. Forward Voltage.

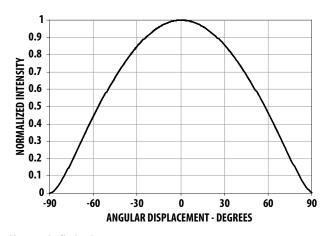

Figure 7. Radiation Pattern.

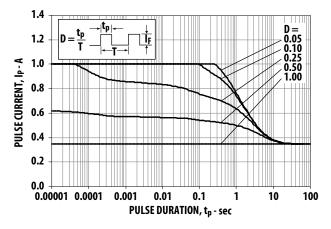

Figure 8. Maximum pulse current vs. ambient temperature. Derated based on  $T_A = 25$ °C,  $R\theta_{J-A} = 50$ °C/W.

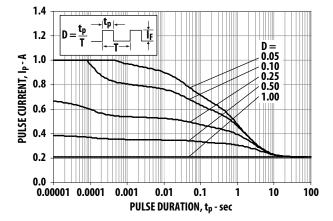

Figure 9. Maximum pulse current vs. ambient temperature. Derated based on  $T_A = 85$ °C,  $R\theta_{J-A} = 50$ °C/W.

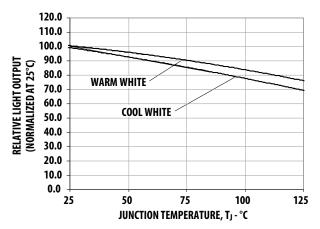

Figure 10. Relative Light Output vs. Junction Temperature.

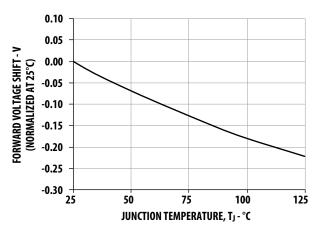

Figure 11. Forward Voltage Shift vs. Junction Temperature.

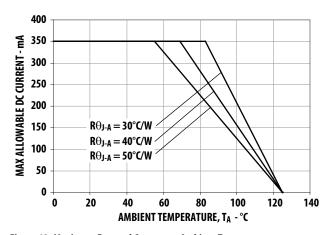

Figure 12. Maximum Forward Current vs. Ambient Temperature. Derated based on  $T_{JMAX}=125^{\circ}C, R\theta_{J-A}=30^{\circ}C/W, 40^{\circ}C/W$  and  $50^{\circ}C/W.$ 

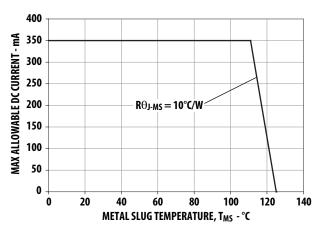

Figure 13. Maximum Forward Current vs. Metal Slug Temperature. Derated based on  $T_{JMAX} = 125^{\circ}C$ ,  $R\Theta_{J-MS} = 10^{\circ}C/W$ .

## **Handling Precaution**

The encapsulation material of the product is made of silicone for better reliability of the product. As silicone is a soft material, please do not press on the silicone or poke a sharp object onto the silicone. These might damage the product and cause premature failure. During assembly of handling, the unit should be held on the body only. Please refer to Avago Application Note AN 5288 for detail information.

### **Moisture Sensitivity**

This product is qualified as Moisture Sensitive Level 2a per Jedec J-STD-020. Precautions when handling this moisture sensitive product is important to ensure the reliability of the product. Do refer to Avago Application Note AN5305 Handling of Moisture Sensitive Surface Mount Devices for details.

### A. Storage before use

- Unopen moisture barrier bag (MBB) can be stored at <40°C/90%RH for 12 months. If the actual shelf life has exceeded 12 months and the humidity indicator card (HIC) indicates that baking is not required, then it is safe to reflow the LEDs per the original MSL rating.
- It is not recommended to open the MBB prior to assembly (e.g. for IQC).

#### B. Control after opening the MBB

- The humidity indicator card (HIC) shall be read immediately upon opening of MBB.
- The LEDs must be kept at <30°C / 60%RH at all time and all high temperature related process including soldering, curing or rework need to be completed within 672 hours.

#### C. Control for unfinished reel

 For any unused LEDs, they need to be stored in sealed MBB with desiccant or desiccator at <5%RH.</li>

#### D. Control of assembly boards

 If the PCB soldered with the LEDs is to be subjected to other high temperature processes, the PCB need to be stored in sealed MBB with desiccant or desiccator at <5%RH to ensure no LEDs have exceeded their floor life of 672 hours.

#### E. Baking is required if

- HIC "10%" indicator is not blue and "5%" indicator is pink.
- The LEDs are exposed to condition of >30°C / 60%
   RH at any time.
- The LED floor life exceeded 672hrs.

Recommended baking condition: 60±5°C for 20hrs.

**DISCLAIMER:** Avago's products and software are not specifically designed, manufactured or authorized for sale as parts, components or assemblies for the planning, construction, maintenance or direct operation of a nuclear facility or for use in medical devices or applications. Customer is solely responsible, and waives all rights to make claims against Avago or its suppliers, for all loss, damage, expense or liability in connection with such use.
