

HLMP-40xx/HLMP-08xx

T-1 3/4, 2 mm x 5 mm Rectangular Bicolor LED Lamps

Data Sheet

Description

The T-1 3/4 HLMP-40xx and 2 mm by 5 mm rectangular HLMP-08xx are three leaded bicolor light sources designed for a variety of applications where dual state illumination is required in the same package. There are two LED chips, mounted on a central common cathode lead for maximum on-axis viewability. Colors between the two chips can be generated by independently pulse width modulating the LED chips.

Features

- Two color operation
- Three leads with one common cathode
- Option of straight or spread leads configuration
- Diffused, wide visibility range

Selection Guide

Package	Part Number	Color	Min. Luminous Intensity I_v (mcd)			I_F (mA)
			Green	Red	Yellow	
T-1 3/4	HLMP-4000	Green/HER	4.2	2.1		10
	HLMP-4000#xxx		4.2	2.1		10
	HLMP-4015	Green/Yellow	20.0		20	20
Rectangular	HLMP-0800	Green/HER	2.6	2.1		20
	HLMP-0805	Green/Yellow	2.6		1.4	20

Part Numbering System

HLMP - X X X X # X X X

Mechanical Options

002: Tape & Reel, Straight Leads
010: Right Angle Housing, Even Leads

Color Options

00: High Efficiency Red (HER)/High Efficiency Green
05/15: Yellow/High Efficiency Green

Package Options

40: T-1 3/4 (5 mm)
08: Rectangular

Package Dimensions

HLMP-40xx Straight Leads

HLMP-08xx Straight Leads

Notes:

1. All dimensions are in millimeters (inches).
2. Epoxy meniscus may extend about 1 mm (0.040") down the leads.

Absolute Maximum Ratings at $T_A = 25^\circ\text{C}$

Parameter	HER/Green	Yellow/Green	Units
Peak Forward Current	90	60	mA
Average Forward Current ^[1,2] (Total)	25	20	mA
DC Current ^[2] (Total)	30	20	mA
Power Dissipation ^[3] (Total)	135	135	mW
Operating Temperature Range	-20 to +100	-20 to +100	$^\circ\text{C}$
Storage Temperature Range	-55 to +100	-55 to +100	$^\circ\text{C}$
Reverse Voltage ($I_R = 100 \mu\text{A}$)	5	5	V
Transient Forward Current ^[4] (10 μsec Pulse)	500	500	mA

Notes:

1. See Figure 5 to establish pulsed operating conditions.
2. The combined simultaneous current must not exceed the maximum.
3. The combined simultaneous current must not exceed the maximum.
4. The transient peak current is the maximum non-recurring current that can be applied to the device without damaging the LED die and wirebond. It is not recommended that the device be operated at peak currents beyond the peak forward current listed in the Absolute Maximum Ratings.

Electrical/Optical Characteristics at $T_A = 25^\circ\text{C}$

Symbol	Parameter	High Efficiency Red			Green			Yellow			Units	Test Condition
		Min.	Typ.	Max.	Min.	Typ.	Max.	Min.	Typ.	Max.		
λ_{PEAK}	Peak Wavelength	635			568			583			nm	20 mA
λ_d	Dominant Wavelength ^[1]	626			570			585			nm	20 mA
τ_s	Speed of Response	90			260			90			ns	
C	Capacitance	11			18			15			pF	$V_F = 0$, $f = 1 \text{ MHz}$
V_F	Forward Voltage	1.9	2.6		2.2	3.0		2.1	2.6		V	20 mA
V_R	Reverse Voltage	5			5			5			V	$I_R = 100 \mu\text{A}$
$R\theta_{\text{J-PIN}}$	Thermal Resistance	210			210			210			$^\circ\text{C}/\text{W}$	Junction-to-Cathode Lead
$2\theta_{1/2}$	Included Angle between half luminous intensity points ^[2]										degree	
	HLMP-40xx	65			65			65				
	HLMP-08xx	100			100			100				
η_V	Luminous Efficacy ^[3]	145			595			500			lm/W	

Notes:

1. The dominant wavelength, λ_d , is derived from the CIE Chromaticity Diagram and represents the single wavelength which defines the color of the device.
2. $\theta_{1/2}$ is the off-axis angle at which the luminous intensity is half the axial luminous intensity.
3. Radiant intensity, I_e , in watts steradian, may be found from the equation $I_e = I_v/\eta_V$, where I_v is the luminous intensity in candelas and η_V is the luminous efficacy in lumens/watt.

Mechanical Option Matrix

Mechanical Option Code	Definition
002	Tape & Reel, straight leads, minimum increment 1300 pcs/bag
010	Right Angle Housing, even leads, minimum increment 500 pcs/bag

All categories are established for classification of products. Products may not be available in all categories. Please contact your local Avago representative for further clarification/information.

Precautions

Lead Forming

- The leads of an LED lamp may be preformed or cut to length prior to insertion and soldering into PC board.
- If lead forming is required before soldering, care must be taken to avoid any excessive mechanical stress induced to LED package. Otherwise, cut the leads of LED to length after soldering process at room temperature. The solder joint formed will absorb the mechanical stress of the lead cutting from traveling to the LED chip die attach and wirebond.
- It is recommended that tooling made to precisely form and cut the leads to length rather than rely upon hand operation.

Soldering Conditions

- Care must be taken during PCB assembly and soldering process to prevent damage to LED component.
- The closest LED is allowed to solder on board is 1.59 mm below the body (encapsulant epoxy) for those parts without standoff.
- Recommended soldering conditions:

	Wave Soldering	Manual Solder Dipping
Pre-heat Temperature	105 °C Max.	–
Pre-heat Time	30 sec Max.	–
Peak Temperature	250 °C Max.	260 °C Max.
Dwell Time	3 sec Max.	5 sec Max.

- Wave soldering parameter must be set and maintained according to recommended temperature and dwell time in the solder wave. Customer is advised to periodically check on the soldering profile to ensure the soldering profile used is always conforming to recommended soldering condition.
- If necessary, use fixture to hold the LED component in proper orientation with respect to the PCB during soldering process.
- Proper handling is imperative to avoid excessive thermal stresses to LED components when heated. Therefore, the soldered PCB must be allowed to cool to room temperature, 25°C, before handling.
- Special attention must be given to board fabrication, solder masking, surface plating and lead holes size and component orientation to assure solderability.
- Recommended PC board plated through hole sizes for LED component leads:

LED Component Lead Size	Diagonal	Plated Through Hole Diameter
0.457 x 0.457 mm (0.018 x 0.018 inch)	0.646 mm (0.025 inch)	0.976 to 1.078 mm (0.038 to 0.042 inch)
0.508 x 0.508 mm (0.020 x 0.020 inch)	0.718 mm (0.028 inch)	1.049 to 1.150 mm (0.041 to 0.045 inch)

Note: Refer to application note AN1027 for more information on soldering LED components.
