

4-Channel Digital Input Module DC 24 V

2-conductor connection; high-side switching

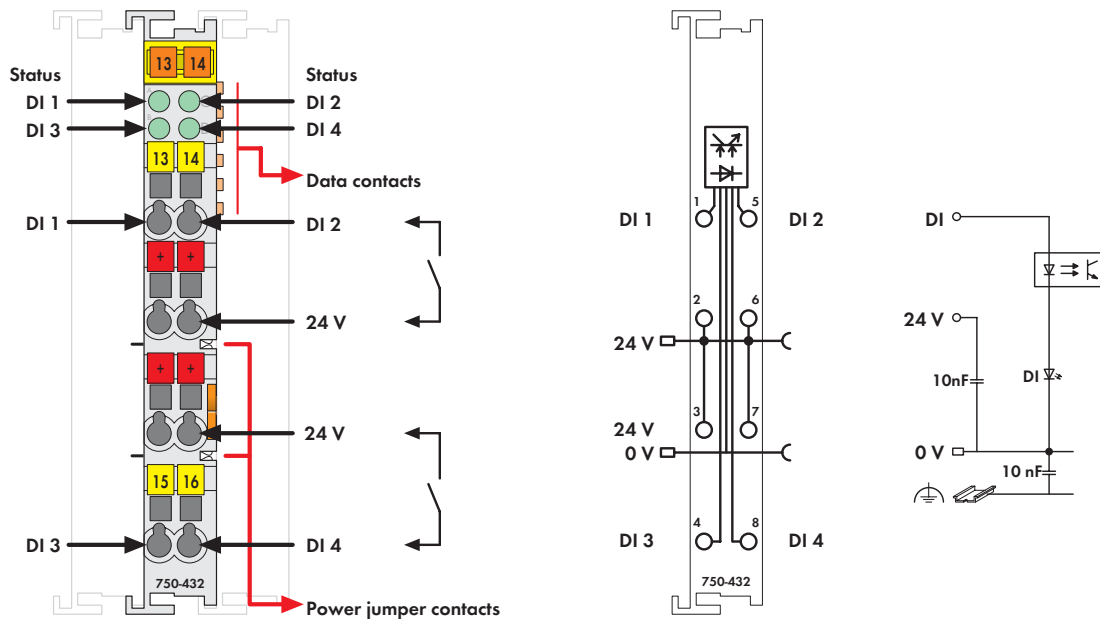

Fig. Series 750 / Technical data see page 30 / Delivery without Mini WSB marker
Series 750 / 753 marking see pages 20 ... 21 / 22 ... 23

The digital input module receives control signals from digital field devices (sensors, etc.).

The module is a 4-input channel, 2-conductor device. Due to its four 24 V connections, four sensors may be directly connected to the module.

Each input module has a noise-rejection filter. This filter is available with different time constants.

An optocoupler is used for electrical isolation between the bus and the field side.
