

Streamline your wiring experience

Enhance productivity, aesthetics, and compatibility.

Harmony XB4/XB5 Compact Push-in Block

Push-in technology cuts installation costs by reducing wiring time and effort.

With no tools needed, it offers significant time and cost efficiency compared to traditional screw-in or spring clamp options.

As a compact solution, it helps to reduce the panel depth.

The flush mounted heads combined with the reduced size contacts and LED blocks contribute to a sleek and aesthetically pleasing panel design.

Compact push-in blocks expand versatility, allowing for easy integration with the Harmony range.

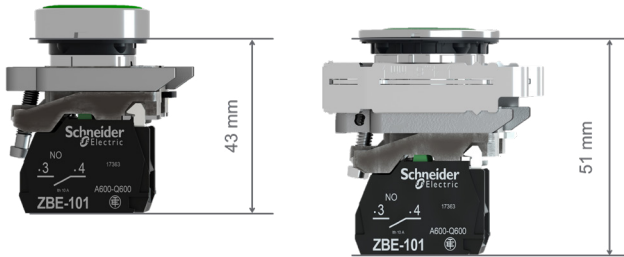

Ensure a higher compatibility with control stations. Additionally, its stackable design enables an increased number of contact possibilities, offering customers greater flexibility and the ability to upgrade their machines without compatibility concerns.
