Colour variability C16/Ecomate housings

Due to the current supply situation on the market for all plastic raw materials we have decided to qualify new materials for our housings. All approved material types have been tested comprehensively in our laboratory to guarantee the technical performance as specified in our catalogues and data sheets.

Please note that the different raw materials which are used now can lead to colour variability of the housings which **DON'T AFFECT** the technical performance of our products. All specifications are still valid.

This step was necessary to avoid delivery delays caused by raw material shortage. We kindly ask you for your understanding.
