## Panasonic ideas for life

Compliant with European
standards (reinforced insulation) 1 Form Al1 Form C 6A Slim power relays

## FEATURES

1. High density mounting with 5 mm .197 inch width
Space saved with 5 mm .197 inch slim type with 28 mm 1.102 inch length. Allows high density mounting and use in compact devices.
2. Satisfies reinforced insulation standard (EN/IEC 61810-1).
3. High switching capacity

Supports 6A 250 V AC nominal switching capacity (resistive load) and AC15 and DC13 (inductive load).
4. 1 Form A and 1 Form C contact arrangements with options for a variety of applications.
5. 4,000 V high breakdown voltage and 6,000 V high surge breakdown voltage. Controller protection against surges and noise with a breakdown voltage of 4,000 Vrms for 1 min. between contacts and coil, and $6,000 \mathrm{~V}$ surge breakdown voltage between contacts and coil. 6. Resistance to heat and fire; EN60335-1, clause 30 (GWT) approved.
7. Sealed construction allows automatic washing.
8. Complies with all safety standards. UL, C-UL, VDE certified.

## TYPICAL APPLICATIONS

1. Interface relays for programmable controllers
2. Output relays for measuring equipment, timers, counters and temperature controllers
3. Industrial equipment, office equipment
4. Household appliances for Europe

|  | Breakdown voltage (Initial) | Between open contacts | 1,000 Vrms for 1 min . (Detection current: 10 mA ) |  |
|  |  | Between contact and coil | 4,000 Vrms for 1 min . (Detection current: 10 mA ) |  |
|  | Surge breakdown voltage (Between contact and coil)*2 |  | 6,000 V (initial) |  |
|  | Temperature rise (at $20^{\circ} \mathrm{C} 68^{\circ} \mathrm{F}$ ) |  | Max. $45^{\circ} \mathrm{C} 113^{\circ} \mathrm{F}$ <br> (By resistive method, nominal coil voltage applied to the coil; contact carrying current: 6A.) |  |
|  | Operate time (at $20^{\circ} \mathrm{C} 68^{\circ} \mathrm{F}$ ) |  | Max. 8 ms <br> (Nominal coil voltage applied to the coil, excluding contact bounce time.) |  |
|  | Release time (at $20^{\circ} \mathrm{C} 68^{\circ} \mathrm{F}$ ) |  | Max. 4 ms(Nominal coil voltage applied to the coil, excluding contact bounce time.) (without diode) |  |
| Mechanical characteristics | Shock resistance | Functional | Min. 98 m/s ${ }^{2}$ <br> (Half-wave pulse of sine wave: 11 ms ; detection time: $10 \mu \mathrm{~s}$ ) | Min. $49 \mathrm{~m} / \mathrm{s}^{2}$ <br> (Half-wave pulse of sine wave: 11 ms ; detection time: $10 \mu \mathrm{~s}$ ) |
|  |  | Destructive | Min. $980 \mathrm{~m} / \mathrm{s}^{2}$ (Half-wave pulse of sine wave: 11 ms.$\left.\right)$ |  |
|  | Vibration resistance | Functional | 10 to 55 Hz at double amplitude of 1 mm (Detection time: $10 \mu \mathrm{~s}$.) |  |
|  |  | Destructive | 10 to 55 Hz at double amplitude of 1.5 mm |  |
| Expected life | Mechanical |  | Min. $5 \times 10^{6}$ (at 180 cpm ) |  |
|  | Electrical*3 |  | N.O.: Min. $5 \times 10^{4}$ (at resistive load, 6 cpm and nominal switching capacity) | $\begin{gathered} \text { N.O.: Min. } 5 \times 10^{4}, \text { N.C.: Min. } 3 \times 10^{4} \\ \text { (at resistive load, } \\ 6 \mathrm{cpm} \text { and nominal switching capacity) } \end{gathered}$ |
| Conditions | Conditions for operation, transport and storage*4 |  | Ambient temperature: $-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}-40^{\circ} \mathrm{F}$ to $+185^{\circ} \mathrm{F}$; Humidity: 5 to $85 \%$ R.H. (Not freezing and condensing at low temperature) |  |
| Unit weight |  |  | Approx. 5 g .18 oz |  |

*1 This value can change due to the switching frequency, environmental conditions, and desired reliability level, therefore it is recommended to check this with the actual load.
*2 Wave is standard shock voltage of $\pm 1.2 \times 50 \mu$ s according to JEC-212-1981
*3 For cycle lifetime, refer to "Cautions for Use 4)" in NOTES (page 5)
*4 The upper operation ambient temperature limit is the maximum temperature that can satisfy the coil temperature rise value. Refer to "6. Usage, Storage and Transport Conditions" in AMBIENT ENVIRONMENT section in Relay Technical Information.

## REFERENCE DATA

1. Electrical life

Tested sample: APF30224

| Load type |  | Voltage | Current | Ambient temperature | No. of ops. |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Resistive load |  | 250 V AC | 6 A | $85^{\circ} \mathrm{C} 185^{\circ} \mathrm{F}$ | 30,000 |
| Inductive load | AC 15 | 250 V AC | 3 A | $25^{\circ} \mathrm{C} 77^{\circ} \mathrm{F}$ | 20,000 |
|  | DC 13 | 24 V DC | 2 A | $25^{\circ} \mathrm{C} 77^{\circ} \mathrm{F}$ | 6,000 |

Notes: 1. Switch contacts are all on N.O. side.

## 2. AC 15 and DC 13 comply with IEC-60947-5-1 testing conditions.

2. Max. switching capacity

Load Limit Curve
3. Coil temperature rise Tested sample: APF30224 Measured portion: Inside the coil Ambient temperature: $28^{\circ} \mathrm{C} 82^{\circ} \mathrm{F}$

4. Ambient temperature characteristics

Tested sample: APF30224, 6 pcs.

## NOTES

$\square$ Usage, transport and storage conditions

1) Temperature:
-40 to $+85^{\circ} \mathrm{C}-40$ to $+185^{\circ} \mathrm{F}$
2) Humidity: 5 to $85 \% \mathrm{RH}$
(Avoid freezing and condensation.) The humidity range varies with the temperature. Use within the range indicated in the graph below.
3) Atmospheric pressure: 86 to 106 kPa Temperature and humidity range for usage, transport, and storage

4) Condensation

Condensation forms when there is a sudden change in temperature under high temperature and high humidity conditions. Condensation will cause deterioration of the relay insulation.
5) Freezing

Condensation or other moisture may freeze on the relay when the temperatures is lower than $0^{\circ} \mathrm{C} 32^{\circ} \mathrm{F}$. This causes problems such as sticking of movable parts or operational time lags.
6) Low temperature, low humidity environments
The plastic becomes brittle if the relay is exposed to a low temperature, low humidity environment for long periods of time.

## - Solder and cleaning conditions

1) Please obey the following conditions when soldering automatically.
(1) Preheating: Within $120^{\circ} \mathrm{C} 248^{\circ} \mathrm{F}$ (solder surface terminal portion) and within 120 seconds
(2) Soldering iron: $260^{\circ} \mathrm{C} \pm 5^{\circ} \mathrm{C}$
$500^{\circ} \mathrm{F} \pm 41^{\circ} \mathrm{F}$ (solder temperature) and within 6 seconds (soldering time)
2) Please obey the following conditions when soldering manually.
Thoroughly clean the iron tip.
(1) Soldering iron: 30 to 60 W
(2) Soldering iron tip temperature: $350^{\circ} \mathrm{C}$ $662^{\circ} \mathrm{F}$
(3) Soldering time: within approx. 3

## seconds

3) Since this is not a sealed type relay, do not clean it as is. Also, be careful not to allow flux to overflow above the PC board or enter the inside of the relay.

## ■ Cautions for use

1) For precautions regarding use and explanations of technical terminology, please refer to our web site.
(panasonic-electric-works.net/ac)
2) To ensure good operation, please keep the voltage on the coil ends to $\pm 5 \%$ (at $20^{\circ} \mathrm{C} 68^{\circ} \mathrm{F}$ ) of the rated coil operation voltage. Also, please be aware that the pick-up voltage and drop-out voltage may change depending on the temperature and conditions of use.
3) Keep the ripple rate of the nominal coil voltage below $5 \%$.
4) The cycle lifetime is defined under the standard test condition specified in the JIS C 5442 standard (temperature 15 to $35^{\circ} \mathrm{C} 59$ to $95^{\circ}$ F, humidity 25 to $75 \%$ ). Check this with the real device as it is affected by coil driving circuit, load type, activation frequency, activation phase, ambient conditions and other factors. Also, be especially careful of loads such as those listed below.
(1) When used for AC load-operating and the operating phase is synchronous. Rocking and fusing can easily occur due to contact shifting.
(2) Highly frequent load-operating When highly frequent opening and closing of the relay is performed with a load that causes arcs at the contacts, nitrogen and oxygen in the air is fused by the arc energy and $\mathrm{HNO}_{3}$ is formed. This can corrode metal materials.

Three countermeasures for these are listed here.

- Incorporate an arc-extinguishing circuit.
- Lower the operating frequency
- Lower the ambient humidity

5) Minimum switching capacity provides a guideline for low level load switching. This value can change due to the switching frequency, environmental conditions, and desired reliability level, therefore it is recommended to check this with the actual load.
6) Heat, smoke, and even a fire may occur if the relay is used in conditions outside of the allowable ranges for the coil ratings, contact ratings, operating cycle lifetime, and other specifications. Therefore, do not use the relay if these ratings are exceeded.
7) If the relay has been dropped, the appearance and characteristics should always be checked before use.
8) Incorrect wiring may cause
unexpected events or the generation of heat or flames.
9) The amount of relay operation noise will vary depending on the substrate used for mounting. Please use after verifying with the relay mounted on the substrate.

We recommend this extra manufacturers socket. It is only available in Europe.

PF (APF) relay socket

APF1-PS-GD

## FEATURES

1. Socket incorporates LED-indication
2. It is equipped with a hold-down clip and an integrated casting mechanism
3. Suitable for PCB-mounting

PIN LAYOUT
HANDLING

(+,-) Polarity of LED
Bottom view

Push down the hold-down clip in order to cast the relay.

NOTE: The PF relay approvals do not apply to the PF relay socket.

[^0]:    Note: UL/C-UL/VDE approved type is standard.
