Amplifier built-in extraordinarily small and slim size

Smallest body, just 3.5 mm 0.138 in thick

It can be mounted in a very small space as its size is just $W10 \times H14.5 \times D3.5$ mm
 $W0.394 \times H0.571 \times D0.138$ in (thru-beam, front sensing type).

Flexible mounting

The diffuse reflective type sensor is front sensing and is so thin that it gives an impression of being just pasted on the mounting base. The thru-beam type is available as front sensing type, as well as, side sensing type, allowing flexible mounting.

BASIC PERFORMANCE

High-speed response time: 0.5 ms

The sensor is suitable for detecting small and high-speed traveling objects.

Minimum sensing object: $\phi 1$ mm $\phi 0.039$ in

EX-11(E) EX-15(E)

EX-11, EX-11E, EX-15 and EX-15E are incorporated with $\phi 1$ mm $\phi 0.039$ in slit masks so that $\phi 1$ mm $\phi 0.039$ in, or more, object can be detected. Hence, they are suitable for precise positioning or small parts detection.

Long sensing range: 1 m 3.281 ft

EX-19

A sensing range of 1 m 3.281 ft has been realized with a slim size of just 3.5 mm 0.138 in. It can be used to detect even wide IC trays.

APPLICATIONS

Verifying position of PCBs

Detecting ICs

Detecting PCB rack

Detecting wafer cassette

Detecting thin ring

Checking for absence of capacitor in tray

BASIC PERFORMANCE

Background suppression

EX-14

Hardly affected by background

Even a specular background separated by 100 mm 3.937 in, or more, is not detected. (However, the background should be directly opposite. A spherical or curved background may be detected.)

Black object reliably detected

It can reliably detect dark color objects since it is convergent reflective type.

The best distance is approx. 10 mm 0.394 in from the object.

ENVIRONMENTAL RESISTANCE

Waterproof

The sensor can be hosed down because of its IP67 construction and the non-corrosive stainless steel mounting bracket.

Note: However, take care that if it is exposed to water splashes during operation, it may detect a water drop itself.

Ten times durable

EX-R

Flexible cable on EX- R is 10 times as durable as conventional model. It is most suitable for moving parts, such as robot arm, etc.

FUNCTIONS

Bright 2-color indicator

A convenient 2-color indicator has been incorporated in the miniature body.

(Green: Stability indicator)

SENSING CHARACTERISTICS (TYPICAL)

EX-14

Convergent reflective type

Sensing fields

Horizontal (left and right) direction

Vertical (up and down) direction

Correlation between lightness and sensing range

The sensing region (typical) is represented by oblique lines in the left figure. However, the sensitivity should be set with enough margin because of slight variation in products.

(Lightness shown on the left may differ slightly from the actual object condition.)

Correlation between material (50 x 50 mm 1.969 x 1.969 in) and sensing range

The bars in the graph indicate the sensing range (typical) for the respective material. However, there is a slight variation in the sensing range depending on the product. Further, if there is a reflective object (conveyor, etc.) in the background of the sensing object, since it affects the sensing, separate it by more than twice the sensing range shown in the left graph.

PRECAUTIONS FOR PROPER USE

Refer to p.986~ for general precautions.

- Never use this product as a sensing device for personnel protection.
- In case of using sensing devices for personnel protection, use products that meet laws and standards, such as OSHA, ANSI or IEC etc., for personnel protection applicable in each region or country.

Mounting

- In case of mounting on tapped holes (Unit: mm in)

Side sensing

Front sensing

The tightening torque should be 0.2 N·m or less.

- In case of using attached screws and nuts (Unit: mm in)

Side sensing

Front sensing

The tightening torque should be 0.2 N·m or less.

Operation mode switch

(EX-15 , EX-15E , EX-17 and EX-17E only)

Switch position	Description
	Light-ON mode is set when the switch is turned fully clockwise (L side).
	Dark-ON mode is set when the switch is turned fully counterclockwise (D side).

Others

- Do not use during the initial transient time (50 ms) (EX-15 , EX-15E , EX-17 , EX-17E : 100 ms) after the power supply is switched on.
- Excess bending of the cable or stress applied to the cable may disconnect the internal lead wire.
