

### Common features

- Space saving 6.2 mm wide
- Connections for 16-way jumper link
- Integral coil indication and protection circuit
- Secure retention and easy ejection by plastic clip
- Dual screw head (blade+cross) terminals
- 35 mm rail mounting (EN 60715)

### EMR Electromechanical Relays

- 1 CO 6 A 250 V AC
- High switching capability

### SSR Solid State Relays

- 1 solid state output (options 0.1 A 48 V DC, 2 A 24 V DC, 2 A 240 V AC)
- Silent, high speed switching, long electrical life

### MasterBASIC

- For general use in any type of system
- EMR: 6 to 24 V AC/DC and 230 V AC supply
- SSR: 6 to 24 V DC and 230 V AC supply

39.11

### MasterPLUS

- Accepts the output fuse module, for the easy and space efficient protection of output circuits
- EMR: 6 to 125 V AC/DC, 125 and 220 V DC, 230 V AC supply
- SSR: 24 - 125 V AC/DC, 6 to 220 V DC and 230 V AC supply
- Special 125 and 230 V AC leakage current suppression types (39.31.3 EMR and 39.30.3 SSR)

39.31 - 39.31.3

### MasterTIMER

- Timer adjustment via top mounted rotary knob accessible after assembly
- Control signal terminal
- DIP-switch for selection of 4 time scales and 8 functions
- Output with fuse module option
- EMR and SSR: 12 to 24 V AC/DC supply

**MasterBASIC**  
39.11 - 39.10

- For general interface use in any type of system and application.
- Can be used for input interface applications between auxiliary contacts, sensors etc. and controllers, PLCs' or motors. Or for output interface between PLC's controllers and relays, solenoids etc.

**MasterPLUS**  
39.31 - 39.30 - 39.31.3 - 39.30.3

- This special version provides extra protection for the output circuit thanks to the replaceable fuse module.
- For general interface use in any type of system and application.
- Can be used for input interface applications between auxiliary contacts, sensors etc. and controllers, PLCs' or motors. Or for output interface between PLC's controllers and relays, solenoids etc.

**MasterINPUT  
39.41 - 39.40**

- These models allow the full termination of input device to the interface without the need for additional terminals - saving component cost, time and panel space.
- Quick and easy distribution of supply voltage through the jumper link on the Bus-Bar (BB) connection.
- Ideal for interface applications between the auxiliary contacts, sensors, limit switches and Controllers or PLC's.

**MasterOUTPUT  
39.21 - 39.20**

- These models allow the full termination of output device to the interface without the need for additional terminals - saving component cost, time and panel space.
- Quick and easy distribution of supply voltage through the jumper link on the Bus-Bar (BB) connection.
- Ideal for interface applications between the PLC's or Controllers and output devices such as electromagnetic valves or motors etc..

**MasterTIMER  
39.81 - 39.80**

- Slim and Multifunction Timed Interface modules.

## Contact specification (EMR)

**F 39 - Electrical life (AC) v contact current**

**H 39 - Maximum DC1 breaking capacity**

- When switching a resistive load (DC1) having voltage and current values under the curve, an electrical life of  $\geq 60 \cdot 10^3$  can be expected.
- In the case of DC13 loads, the connection of a diode in parallel with the load will permit a similar electrical life as for a DC1 load.  
Note: the release time for the load will be increased.

**Wiring diagram**

U = Supply voltage

S = Signal switch

 = Output contact

Without control signal

**(AI) On-delay**  
Apply power to timer. Output contacts transfer after preset time has elapsed. Reset occurs when power is removed.

**(DI) Interval**  
Apply power to timer. Output contacts transfer immediately. After the preset time has elapsed, contacts reset.

**(GI) Pulse (0.5s) delayed**  
Apply power to timer. Output contacts transfer after preset time has elapsed. Reset occurs after a fixed time of 0.5s.

**(SW) Symmetrical flasher (starting pulse on)**  
Apply power to timer. Output contacts transfer immediately and cycle between ON and OFF for as long as power is applied. The ratio is 1:1 (time on = time off).

With control signal

\*With DC supply, positive polarity has to be connected to B1, terminal (according to EN 60204-1).

**(BE) Off-delay with control signal**  
Power is permanently applied to the timer. The output contacts transfer immediately on closure of the Signal Switch (S). Opening the Signal Switch initiates the preset delay, after which time the output contacts reset.

**(CE) On- and off-delay with control signal**  
Power is permanently applied to the timer. Closing the Signal Switch (S) initiates the preset delay, after which time the output contacts transfer. Opening the Signal switch initiates the same preset delay, after which time the output contacts reset.

**(DE) Interval with control signal on**  
Power is permanently applied to the timer. On momentary or maintained closure of Signal Switch (S), the output contacts transfer, and remain so for the duration of the preset delay, after which they reset.

**(EE) Interval with control signal off**  
Power is permanently applied to the timer. On opening of the Signal Switch (S) the output contacts transfer, and remain so for the duration of the preset delay, after which they reset.

• Possible to control an external load, such as another relay coil or timer, connected to the control signal terminal B1.

\*\* A voltage other than the supply voltage can be applied to the command Start (B1), example:

A1 - A2 = 24 V AC  
B1 - A2 = 12 V DC

(according to type):

**Output fuse module for 39.31/30/81/80 types** | 093.63

- For 5 x 20 mm fuses up to 6 A, 250 V
- Easy visibility of the fuse condition through the window
- Quick connection to socket

**Notes**

**Safety:** Because the output circuit can be reinstated (point 3 below), even with the fuse removed, it is important not to consider the removal of the fuse as a "safety disconnect". Always isolate elsewhere before working on the circuit.

**UL:** According to UL508A, the fuse module cannot be installed in power circuits (in which it is mandatory that a fuse certified according to UL category JDDZ be fitted). However, where the MasterInterface is connected as an output interface to a PLC no such restrictions apply, and the fuse module can be usefully employed.

**Multi-state fuse module**

0. As delivered, the socket comes without a fuse module. However, the absent fuse is internally replaced with an electrical link - which allows the interface relay to be used without a fuse module. In this state, the peg/indicator is visually hidden and the connection is protected by a special cap.

1. With fuse module inserted after removing the cap, the fuse is positioned electrically in series with the common output terminal of the interface module (11 for EMR versions, 13+ for SSR versions, 15 for EMR timer, 15+ for SSR timer). This state is indicated by the peg/indicator.

2. If the fuse module is extracted (for example; because the fuse element has blown) the output circuit will be locked open, as this will generally be the "safe option". This state is indicated by the peg/indicator.

3. In order to reinstate the output circuit it is necessary to either re-insert the fuse module (complete with functional fuse), or alternatively, return the peg/indicator to position 0 by gently applying pressure in the direction of the arrow.

<b>16-way jumper link</b>	093.16 (blue)	093.16.0 (black)	093.16.1 (red)
Rated values	36 A - 250 V		
Possibility of multiple connection, side by side			

**Dual-purpose plastic separator (1.8 mm or 6.2 mm separation) | 093.60**

1. By breaking off the protruding ribs (by hand), the separator becomes only 1.8 mm thick; useful for the visual separation of different groups of interfaces, or necessary for the protective separation of different voltages of neighbouring interfaces, or for the protection of cut ends of jumper links.

093.60

2. Leaving the ribs in place provides 6.2mm separation. Simply cutting (with scissors) the relevant segment(s) permits the interconnection across the separator of 2 different groups of interface relays, using the standard jumper link.

## Accessories

093.68.14.1

Approvals  
(according to type):

Connected MasterADAPTER

**MasterADAPTER** 093.68.14.1

The **MasterADAPTER** permits the easy connection of A1/A2 terminals of up to **MasterINTERFACE** modules to PLC outputs via a 14-Pole ribbon cable, plus simple 2-wire power supply connection.
