DIN rail power supply unit 24 V DC/4 A, primary-switched mode, narrow design

Product Description

MINI POWER is the extremely slim power supply unit with constructional widths of 22.5 mm, 45 mm and 67.5 mm. In addition to a 24 V version with output currents of 1.3 A, 2 A and 4 A, special voltages with 5 V/3 A and ± 15 V/1 A and 10 V...15 V/2 A and 8 A are also available. A reliable starting of complex loads is ensured by a power reserve of up to 100% – the POWER BOOST. The high operational reliability is thus dependably guaranteed in complex global networks as well. MINI POWER also functions in applications where static voltage dips, transient failures of the supply voltage or phase failure are to be expected. Generously dimensioned capacitors guarantee a mains buffering of more than 20 ms under full load. Worldwide use is realized by the consistent implementation of a wide-range input. In this way, your whole system can be tested at any manufacturing location in the world and be delivered to global destinations without switching over the input voltage, often a source of faults. This saves storage costs and reduces the logistical work. An international approval package including UL 60950 for information technology equipment and UL 508 for industrial regulating devices pave the way for worldwide applications.

Product Features

- Easy-maintenance connection technology thanks to keyed COMBICON connectors
