

# 100W Single Output with Battery Charger(UPS Function) PSC-100 series

### ■ Features :

- Universal AC input / Full range
- 5"x3" compact size
- Models with L-Bracket and cover available (PSC-100x-C, x=A,B)
- Protections: Short circuit / Overload / Over voltage
- Battery low protection / Battery reverse polarity protection by fuse
- Relay contact signal output for AC OK and Battery Low
- Cooling by free air convection
- 100% full load burn-in test
- 2 years warranty

### ■ GTIN CODE

**NOTE**

1. All parameters NOT specially mentioned are measured at 230VAC input, rated load and 25°C of ambient temperature.
2. Ripple & noise are measured at 20MHz of bandwidth by using a 12" twisted pair-wire terminated with a 0.1uF & 47uF parallel capacitor.
3. Tolerance : includes set up tolerance, line regulation and load regulation.
4. Length of set up time is measured at first cold start. Turning ON/OFF the power supply may lead to increase of the set up time.
5. Heat sink HS2,HS3 can not be shorted.
6. Heat sink HS2,HS3 must have safety isolation distance from system case.
7. The power supply is considered a component which will be installed into a final equipment. All the EMC tests are been executed by mounting the unit on a 230mm\*230mm metal plate with 1mm of thickness. The final equipment must be re-confirmed that it still meets EMC directives. For guidance on how to perform these EMC tests, please refer to "EMI testing of component power supplies." (as available on <http://www.meanwell.com>)
8. Please refer to suggest application (2) - (4) in page 3.
9. The ambient temperature derating of 3.5°C/1000m with fanless models and of 5°C/1000m with fan models for operating altitude higher than 2000m(6500ft).

## Output Derating

## Output Derating VS Input Voltage

## Suggested Application

### 1. Backup connection for AC interruption

(1) Please refer to the Fig1.1 for suggested connection.

The power supply charges the battery and provides energy to the load at the same time when the AC main is OK.  
The battery starts to supply power to the load when the AC mains fails.

Fig 1.1 Suggested system connection

### 2. Alarm signal for AC OK and Battery Low

(1) Alarm signal is sent out through "AC OK" & "Battery Low" pins.(relay contact type)

(2) An external voltage source is required for this function. The maximum applied voltage is 30V and the maximum sink current is 1A.

(3) Table 2.1 explains the alarm function built in the power supply

| Function    | Description  | Output of Alarm                                 |
|-------------|--|---|
| AC OK       | The signal is "Low" when the power supply turns on                     | Low or short                                    |
|             | The signal turns to be "High" when the power supply turns OFF          | High or open(External applied voltage 30V max.) |
| Battery Low | The signal is "Low" when the voltage of battery is under A:11V, B:22V  | Low or short                                    |
|             | The signal is "High" when the voltage of battery is above A:11V, B:22V | High or open(External applied voltage 30V max.) |

Table 2.1 Explanation of Alarm Signal

#### AC OK (Battery low)

CN3 Pin1(Pin3)

CN3 Pin2(Pin4)

External voltage source (V) and resistor (R)  
(The max. Sink is 1A and 30V)

Fig 2.2 Internal circuit of AC OK (Battery Low)

(4) RL1 (AC OK) signal will go into hiccup mode when the overload protection is activating.
