HE2G Grip Switch

Compact, light-weight grip switch provides a comfortable hold

An HE2B enabling switch compliant with IEC/EN60947-5-8 is installed inside the HE2G grip switch.

Design

Compactly designed to fit comfortably in the hand

The curved grip and small-size of the grip switch makes operation comfortable. The light-weight (approx. 140g, HE2G-21SH) and compact size is suitable for operators with small hands and for use in narrow work areas.

Lighter operating force ensures stress-free operation

The operating force required to shift from position 1 (contact OFF) to position 2 (contact ON) is reduced by 50% from that of IDEC's HE1G grip switch. Less operating force ensures stress-free operation for long hours.

3-position switch with distinctive tactile feedback

A tactile clicking feedback allows easy recognition of switch operation when shifting from position 1 (contact OFF) to position 2 (contact ON).

Safety

Dual enabling contacts ensures high level of safety

The dual enabling contacts with a separate actuator for each contact is IDEC's original structure, which ensures higher level of safety. Disparity detection of a category 4 (ISO 13849-1) level can be achieved by using this switch with a safety relay module or a safety controller.

Actuators with plastic holders applicable for HS5 series miniature interlock switches can be used with HE2G

Example of automatic and manual operation modes when HS5B/HS5D is used

Automatic mode

Manual mode

Operation modes can be changed easily by inserting/removing the actuator with plastic holder installed to the HE2G into the HS5B/HS5D.

When the actuator is inserted, the operation is in automatic mode. When the actuator is removed, the operation is in manual mode.

- *1) Additional control units installed on the HE2G are as follows:
Emergency Stop Switches: XA1E-BV3U02R
Momentary Pushbuttons: AB6M-M2PLW
Key Selector Switches: AS6M-2KT2PA Pilot Lights: UP9P-2498G
- *2) Silicon rubber: Can be used in general factories. Remains flexible at cold temperatures. Suitable in applications in a wide operating temperature range.
- *3) NBR/PVC polyblend: Oil-proof. Suitable for environments subjected to machine oil and painting robot where silicon rubber cannot be used.

Specifications

40°C min., 50°C max. 2.5A (8 to 12 poles), 2A (13 to 22 poles)
50°C min., 60°C max. 2.5A (6, 7 poles), 2A (8 to 13 poles), 1.5A (14 to 22 poles)

Operating Characteristics

- Terminals NO1-C1/A1-B1, NO2-C2/A3-B3 are outputs of the 3-position enabling switch.
- The above operation characteristics show when the center of the grip switch button is pressed. Because two contacts are designed to operate independently, pressing the edge of the button turns on one contact earlier than the other contact, causing a delay in operation. To avoid this, always press the center of the button.
