ÖLFLEX® HEAT 180 SiF/GL

Application

ÖLFLEX® HEAT 180 SiF/GL are silicone-single cores with glass fibre braiding and recommended for use in the case of raised ambient temperatures under sufficient ventilation and small mechanical stress.

ÖLFLEX® HEAT 180 SiF/GL are largely resistant to oil, alcohol, acids, caustic solutions, salt solutions and salt water.

Typical fields of application: control cabinet manufacturing, appliances and apparatus engineering, electric motor industry, sauna/solarium construction, thermal and heating elements, lighting technology, ventilator engineering, air-conditioning technology, furnace construction, polymer processing, generator and transformer manufacturing.

Design

Conductor fine wire strands of tinned copper acc. to IEC 60228 resp. VDE 0295, Class 5
Insulation Silicone based compound EI2 in acc. to EN 50525-1 resp. VDE 0285-525-1

Core identification code white, with natural glass fibre braiding

Electrical properties at 20°C

Rated voltage 300 / 500 V Test voltage 2000 V AC

Mechanical and thermal properties

Minimum bending radius occasional flexing: 15 x cable \emptyset

fixed installation: 6 x cable Ø

Temperature range -50 °C up to +180 °C max. conductor temperature

Adequate ventilation must be ensured, since the mechanical properties of silicone cables decrease

from +100 °C in the absence of air.

Flammability flame retardant acc. to IEC 60332-1-2

after combustion a SiO2-ash skeleton remains, which has still good insulation properties but has no mechanical stability.

Halogen free acc. to IEC 60754-1
Corrosivity of gases acc. to IEC 60754-2
Tests acc. to IEC 60811

General requirements These cables are conform to the EU-Directive 2014/35/EU (Low Voltage Directive)
