## NOTES

### ■ Usage, transport and storage conditions

- Temperature:  $-40$  to  $+85^\circ\text{C}$   $-40$  to  $+185^\circ\text{F}$
- Humidity: 5 to 85% RH  
(Avoid freezing and condensation.)  
The humidity range varies with the temperature. Use within the range indicated in the graph below.
- Atmospheric pressure: 86 to 106 kPa  
Temperature and humidity range for usage, transport, and storage

- Condensation  
Condensation forms when there is a sudden change in temperature under

- high temperature and high humidity conditions. Condensation will cause deterioration of the relay insulation.
- Freezing  
Condensation or other moisture may freeze on the relay when the temperatures is lower than  $0^\circ\text{C}$   $32^\circ\text{F}$ . This causes problems such as sticking of movable parts or operational time lags.
- Low temperature, low humidity environments  
The plastic becomes brittle if the relay is exposed to a low temperature, low humidity environment for long periods of time.

For Cautions for Use, see [Relay Technical Information](#).
