

1275833 SWISSINNO FRUCHTFLIEGENFALLE

## COMPACT AND HYGIENIC!

Some practical advantages of our fruit fly trap:

- It's a sturdy, **reusable trap** made in two parts of durable plastic.
- Its **specially formulated bait** is irresistible to fruit flies and other flying insects and that in combination with daylight shining through the translucent plastic attracts insects into the trap.
- Replacement bait is available in **packs** of **two** portions.

**Immediately stop infestation by fruit flies**

Fruit flies are often brought into the living and kitchen areas on fruit, indoor pot plants, soil and other natural matter. It is recommended, therefore, to place the SWISSINNO fruit fly trap next to a fruit container.

Of course, the fruit fly trap also works in rooms that are already infested. The bait is especially developed to target fruit flies and it lures them impressively quickly into a death by drowning in the trap.

## Simple Instructions

1. Open the pack and pour the **liquid** bait into the trap.
2. Close the trap and place it where fruit flies are active, especially, for maximum **effectiveness**, next to a bowl of fruit.

## Practical design allows easy refilling

As soon as a large number of fruit flies have **drowned** in the liquid bait, it is advisable to dispose of them, wash the trap out and replace the bait with a new portion. This ensures optimum efficiency of the **fruit fly trap** and maintains a high level of hygiene at all times. The trap is constructed from robust, durable plastic mouldings and can be used again and again: **simply** wash it out with water after use and fill it with a new bait portion.
