

NOTE

All numerical values are in metric units [with U.S. customary units in brackets]. Dimensions are in millimeters [and inches]. Unless otherwise specified, dimensions have a tolerance of ± 0.13 [$\pm .005$] and angles have a tolerance of $\pm 2^\circ$. Figures and illustrations are for identification only and are not drawn to scale.

1. INTRODUCTION

This specification covers the requirements for application of Heavy Duty Stamped and Formed (HDSF) Size 16 Pin and Socket Contacts. These contacts will accept a wire size range of 14–20 AWG and are available with or without an insulation support barrel. The contacts have a current rating of 13 amps and an operating temperature of -40°C to 120°C [-40°F to 248°F]. The application requirements are applicable to hand or automatic machine crimping tools.

When corresponding with TE Connectivity (TE) Personnel, use the terminology provided in this specification to help facilitate your inquiry for information. Basic terms and features of components are provided in Figure 1.

Figure 1

2. REFERENCE MATERIAL

2.1. Revision Summary

- Updated document to corporate requirements
- New logo

2.2. Customer Assistance

Reference Part Number 776491 and Product Code A247 are representative numbers of the HDSF Size 16 Pin and Socket Contacts. Use of these numbers will identify the product line and expedite your inquiries through a service network established to help you obtain product and tooling information. Such information can be obtained through a local TE Representative or, after purchase, by calling the Product Information Center at the number at the bottom of this page.

2.3. Drawings

Customer Drawings for product part numbers are available from the service network. If there is a conflict between the information contained in the Customer Drawings and this specification or with any other technical documentation supplied by TE, call the Product Information Center at the number at the bottom of this page.

2.4. Specifications

Refer to Application Specification 114-6066 for information regarding the connector housings these pin and sockets fit into.

2.5. Instructional Material

The following list includes available instruction sheets (408-series) that provide assembly procedures for operation, maintenance and repair of tooling; and customer manuals (409-series) that provide setup, operation, and maintenance of machines.

Document Number	Document Title
408-3295	Preparing Reel of Contacts for Application Tooling
408-4487	Extraction Tool 776106-1
408-4539	Straight Action Hand Tool 90720-1
408-7424	Checking Terminal Crimp Height or Gaging Die Closure
408-8040	Heavy Duty Miniature Quick-Change Applicators (Side-Feed Type)
408-8053	Conversion Guide for Miniature Quick-Change Applicators
408-8378	PRO-CRIMPER* III Hand Tool Assembly 91337-1 with Die Assembly 91337-2
408-8490	Fine Adjust Assembly 879103-[] for HD-I Type Applicators
408-9816	Handling of Reeled Products
408-9930	PRO-CRIMPER III Hand Crimping Tool Frame Assembly 354940-1
408-10341	PRO-CRIMPER III Hand Tool Assembly 2119118-1 with Die Assembly 2119118-2
409-5128	Basic AMP-O-LECTRIC* Model "K" Terminating Machines and Accessories
409-5842	AMP-O-LECTRIC Model "G" Terminating Machines 354500-[]
409-5852	AMPOMATOR* CLS III-G Lead Making Machine 122500-[]
409-5878	AMPOMATOR CLS IV+ Lead-Making Machine 356500-[]
409-10012	AMP-O-MATIC* Side-Feed Stripper Crimper III Machine 1320895-[]
409-10016	Entry Level Terminator (ELT) Machine 1338600-[]

3. REQUIREMENTS

3.1. Storage

A. Ultraviolet Light

Prolonged exposure to ultraviolet light may deteriorate the chemical composition used in the contact materials.

B. Reeled Contacts

When using reeled contacts, store coil wound reels horizontally and traverse wound reels vertically.

C. Shelf Life

The contacts should remain in the shipping containers until ready for use to prevent deformation to the contacts. The contacts should be used on a first in, first out basis to avoid storage contamination that could adversely affect signal transmissions.

D. Chemical Exposure

Do not store contacts near any chemicals listed below, as they may cause stress corrosion cracking in the contacts.

Alkalies	Ammonia	Citrates	Phosphates	Citrates	Sulfur Compounds
Amines	Carbonates	Nitrites	Sulfur	Nitrites	Tartrates

NOTE

Where the above environmental conditions exist, phosphor-bronze contacts are recommended instead of brass if available.

3.2. Materials

The pin contacts are made of brass and the socket contacts are made from copper alloy. Both contacts are available in gold or nickel plating.

3.3. Wire Size and Preparation

Contacts will accept a wire size range of 20 to 14 AWG and should be terminated to stranded wire. Contacts with an insulation crimp barrel can be used with SXL, GXL, and TXL insulation types with a minimum insulation diameter or 1.27 mm [.050 in.] and a maximum insulation diameter of 3.33 mm [.131 in.]. See Figure 2.

NOTE

For contacts that do not have an insulation support barrel, the insulation diameter limitations are controlled by the maximum and minimum allowable limits of the connector system being used.

NOTE

The applied crimp dimension (within the functional range of the product) is dependent on the termination tooling being used. Refer to the documentation (applicator logs and instruction sheets) supplied with the termination tooling for the applied crimp height. See Section 5, TOOLING.

CAUTION

DO NOT nick, scrape, or cut the wire conductor during the stripping operation.

Note: Not to Scale

CONN TYPE	WIRE SIZE RANGE	WIRE SIZE, AWG	INSULATION DIAMETER RANGE	STRIP LENGTH	WIRE BARREL		INSULATION BARREL CRIMP WIDTH (NOMINAL)
					CRIMP HEIGHT	CRIMP WIDTH (NOMINAL)	
WITH INSUL BARREL	20-18	20	1.27-2.72 [.050-.107]	5.08 [.200]	1.27-1.17 [.050-.046]	2.032 [.080]	3.175 [.125]
			2.26-3.33 [.089-.131]	5.08 [.200]	1.27-1.17 [.050-.046]	2.54 [.100]	3.30 [.130]
		18	1.27-2.72 [.050-.107]	5.08 [.200]	1.34-1.24 [.053-.049]	2.032 [.080]	3.175 [.125]
			2.26-3.33 [.089-.131]	5.08 [.200]	1.37-1.27 [.054-.050]	2.54 [.100]	3.30 [.130]
	18 AWG 1.5 mm ²	1.5 mm ²	1.65-3.00 [.065-.118]	5.08 [.200]	1.55-1.45 [.061-.057]	2.29 [.090]	3.30 [.130]
		16	1.65-3.00 [.065-.118]	5.08 [.200]	1.50-1.40 [.059-.055]	2.29 [.090]	3.30 [.130]
		1.0 mm ²	1.65-3.00 [.065-.118]	5.08 [.200]	1.34-1.24 [.053-.049]	2.29 [.090]	3.30 [.130]
		18	1.65-3.00 [.065-.118]	5.08 [.200]	1.37-1.27 [.054-.050]	2.29 [.090]	3.30 [.130]

		14	1.96-3.94 [.077-.155]	5.08 [.200]	1.70-1.60 [.067-.063]	2.54 [.100]	---

Figure 2

3.4. Crimped Contact Requirements

The contact shall be located in desired tooling and crimped according to the instructions packaged with that tooling. See Section 5, TOOLING, of this document for details on tooling options and instructional materials.

CAUTION

Wire insulation shall NOT be cut or broken during the crimping operation, nor shall the insulation be crimped into the contact wire barrel. Reasonable care should be taken by tooling operators to provide undamaged wire terminations.

NOTE

Wire stripping tool jaws may leave corrugated indentations on the surface of the wire insulation. This is especially severe with cross-linked polyethylene (high temperature) insulation. If these indentations occur at the location of the wire seal, leakage may result. Insulation surface within 8.89 mm [.350 in.] from the tip of the contact must be smooth and free of indentations. See Figure 3.

A. Wire Barrel Crimp

The crimp applied to the wire portion of the contact is the most compressed area and is most critical in ensuring optimum electrical and mechanical performance of the crimped contact. The contact wire barrel crimp height must be within the dimension provided in Figure 2.

B. Effective Crimp Length

For optimum crimp effectiveness, the crimp must be within the area shown and must meet the crimp dimensions provided in Figure 3. Effective crimp length shall be defined as that portion of the wire barrel, excluding bellmouth(s), fully formed by the crimping tool. Instructions for adjusting, repairing, and inspecting tools are packaged with the tools. See Section 5, TOOLING.

C. Bellmouths

Front and rear bellmouths shall be evident and conform to the dimensions given in Figure 3.

D. Cutoff Tabs

The cutoff tab shall be cut to the dimensions shown in Figure 3.

E. Burrs

The cutoff burr shall not exceed the dimensions shown in Figure 3.

F. Wire Barrel Flash

The wire barrel flash shall not exceed the dimensions shown in Figure 3, Section X-X.

G. Insulation Barrel Crimp

The insulation barrel shall grip the insulation firmly without cutting into it. Care must be taken to prevent cutting, nicking, or scraping of the insulation. Insulation crimp shall comply to width and height provided in Figure 3.

H. Wire Location

The wire conductor and insulation must be visible in the transition area between the wire and insulation barrels.

I. Conductor Extension

The conductor may extend beyond the wire barrel to the maximum shown.

J. Wire Barrel Seam

The wire barrel seam must be closed with no evidence of loose wire strands visible in the seam.

●NOTE: Rear Bellmouth Dimension for 20-18 AWG Contacts with 2.032 mm [.080 in.] Crimp Width is 0.13-0.51 [.005-.020 in.]

Figure 3

K. Twist and Roll

There shall be no twist, roll, deformation or other damage to the mating portion of the crimped contact that will impair usage of the contact. See Figure 4.

Figure 4

L. Straightness

The force applied during crimping may cause some bending between the crimped wire barrel and the mating portion of the contact. Such deformation is acceptable within the limits provided in Figure 5.

1. The up and down bend of the crimped contact, including cutoff tab and burr, shall not be bent above or below the datum line more than the amount shown.
2. The side-to-side bend of the contact may not exceed the limits provided.

NOTE

Periodic inspections must be made to ensure crimped contact formation is consistent as shown.

NOTE: Pin contact shown, socket contact has the same requirements.

Figure 5

3.5. Contact Repair

Once a contact has been damaged, it can not be used. It must be cut from the wire and replaced with a new contact.

4. QUALIFICATIONS

HDSF Size 16 Pin and Socket Contacts are not required to be agency evaluated. This product is qualified to Mil-Spec C-39029.

5. TOOLING

This section provides a selection of tools for various application requirements. Modified designs and additional tooling concepts may be available to meet other application requirements. A list of tooling recommendations and instructional material packaged with the tooling covering the full wire size range is provided in Figure 6.

NOTE

Tool Engineers have designed machines for a variety of application requirements. For assistance in setting up prototype and production line equipment, contact Tool Engineering through your local TE Representative or call the Tooling Assistance Center number at the bottom of page 1.

• Applicators

Applicators are designed for the full wire size range of strip-fed, precision formed contacts, and provide for high volume, heavy duty production requirements. The applicators can be used in bench or floor model power units.

NOTE

Each applicator is shipped with a metal identification tag attached. DO NOT remove this tag or disregard the information on it. Also, a packet of associated paperwork is included in each applicator shipment. This information should be read before using the applicator; then it should be stored in a clean, dry area near the applicator for future reference. Some changes may have to be made to the applicators to run in all related power units. Contact the Tooling Assistance Center number at the bottom of page 1 for specific changes.

• Power Units

A power unit is an automatic or semi-automatic device used to assist in the application of a product. Power unit includes the power source used to supply the force or power to an applicator.

NOTE

AMP-O-LECTRIC Model "K" Terminating Machine 565435-5 has been superseded by AMP-O-LECTRIC Model "G" Terminating Machine 354500-1 for new applications. For existing applications, the Model "K" is still recommended because of the large number of installed machines.

• Hand Tools

Hand crimping tools are designed for prototype, low-volume applications, and repair.

• Extraction Tools

Extraction Tools are designed to release the contact inside the connector housing without damaging the housing or contacts. Refer to Instruction Sheet 408-4487 for information on Extraction Tool 776106-1.

6. VISUAL AID

Figure 7 shows a typical application of HDSF Size 16 Pin and Socket Contacts. This illustration should be used by production personnel to ensure a correctly applied product. Applications which DO NOT appear correct should be inspected using the information in the preceding pages of this specification and in the instructional material shipped with the product or tooling.

FIGURE 7. VISUAL AID
