PHILIPS

Air humidifier
Safe & clean NanoCloud technology

Highlights

Specifications

NanoCloud technology

NanoCloud

This Philips air humidifier offers a three-stage advanced evaporation system with NanoCloud technology. Stage 1: the absorbent filter on the humidifier catches big particles such as human/pet hair and dust when drawing in the dry air. Stage 2: the advanced evaporation system with NanoCloud technology humidifies the air by adding water molecules to the air and does not carry bacteria or scale. Stage 3: healthy air gets blown out of the humidifier at a constant speed, delivering comfortable, healthy humid air without formation of water mist in your home.

Comfortable humidification

Evenly distributes humidified air throughout the room. Breathe and sleep better at home with healthy humidified air

Healthy air protect lock
When the water tank is empty and needs to be refilled, the healthy air protect lock shuts off the humidifier and a red indicator lights up telling you that the humidifier has stopped.

Dual humidification speed

Choose between silent and standard humidification to allow maximum flexibility.

Best-in-class cleanability

Cleaning humidifiers inside and out – especially the water tank – has never been easier

Easy to fill water tank

2 ways of filling water tank of this Philips humidifier, you can bring water in a jar and fill it locally after removing the tank's top cover or you can take the water tank to the closest tap in your home
