

Mouthpiece for breathalyzers of ACE series

ACE article number 100074

Each mouthpiece is hygienically packaged and has a rebreathing barrier. This prevents accidental aspiration of saliva or germs from the blow-in channel of alcohol testers.

Note: The ACE mouthpiece is intended for single use; that is, one new mouthpiece should be used per person per test. The individual packaging guarantees that a hygienically perfect mouthpiece can always be used. ACE recommends that the mouthpiece should not be disinfected, washed out or otherwise cleaned and reused. ACE Handels- und Entwicklungs GmbH declines any liability for damage caused by repeated use of one and the same mouthpiece.
