

Tour Guide System

The modular tourist guide system that leaves nothing to be desired.

Transmitter for the guide
ATT 100

 Original size

Receiver for the tourist
ATR 100

 Original size

City trips, museums, bus tours, cruises or factory tours . . . the information's come in a crisp, clear sound. Combine your individual communication system for your travel groups. Our tour guide system was developed together with and for the special requirements of tour operators. The guest receiver (ATR100) is the smallest and most lightweight device in the market. With a thin lanyard it can be comfortably worn around the neck. The operating time is more than 10h. The hygienic headset (THS01) is wipeable and also very comfortable to wear. The transmitter (ATT100) is very small and resistant. 10 + 10 pre-programmed channels cover a range of up to 2km. When sending with low power the battery lasts an entire day. With the guide headset (GHS01) it is even possible to play recorded texts or music from an external MP3 player.
