

Smartvest

User manual

You can find important information and FAQs about this and other products online at: www.abus.com

Version 1.2

English translation of the original German user manual. Retain for future reference.

Introduction

Dear Customer,

Thank you for purchasing this product.

This device complies with the requirements of the applicable EU directives. The declaration of conformity can be obtained from:

ABUS Security-Center GmbH & Co. KG Linker Kreuthweg 5 86444 Affing GERMANY

To ensure this condition is maintained and that safe operation is guaranteed, it is your obligation to observe this user manual.

Please read the entire user manual carefully before putting the product into operation, and pay attention to all operating instructions and safety information.

All company names and product descriptions are trademarks of the corresponding owner. All rights reserved.

If you have any questions, please contact your specialist installation contractor or specialist dealer.

Disclaimer

This user manual has been produced with the greatest of care. Should you discover any omissions or inaccuracies, please contact us in writing at the address provided above.

ABUS Security-Center GmbH does not accept any liability for technical and typographical errors, and reserves the right to make changes to the product and user manuals at any time and without prior warning.

ABUS Security-Center GmbH is not liable or responsible for direct or indirect damage resulting from the equipment, performance and use of this product. No guarantee is made for the contents of this document.

Explanation of symbols

	The triangular high voltage symbol is used to warn of the risk of injury or health hazards (e.g. caused by electric shock).
	The triangular warning symbol indicates important notes in this user manual which must be observed.
í	This symbol indicates special tips and notes on the operation of the device.

Lists

1. 2.	 Lists with a set order, given either in the text or warning notice
•	 Lists without a set order, given either in the text or warning notice

Intended use

Only use the device for the purpose for which it was built and designed. Any other use is considered unintended!

This device may only be used for the following purpose(s):

• The Smartvest wireless alarm system enables easy access to modern homes with its combination of reliable all-round security and attractive home-automation functions. Up to 32 wireless components and four IP cameras can be connected to the Smartvest alarm panel via the free app, enabling you to access the alarm panel from anywhere in the world. If an alarm is triggered, the alarm panel activates its built-in, high-volume 90 dB siren; it can also raise the alarm simultaneously via push notifications in the app and email.

Important safety information

General

Before using this device for the first time, please read the following instructions carefully and observe all warning information, even if you are familiar with the use of electronic devices.

Retain this handbook for future reference.

If you sell or pass on the device to third parties, you must include these instructions with the device.

The following safety information and hazard notes are not only intended to protect your health, but also to protect the device from damage. Please read the following points carefully:

Power supply

- Only operate this device using a power source which supplies the grid voltage specified on the type plate. If you are unsure which power supply is available, contact your utility company.
- Disconnect the device from the power supply before carrying out maintenance or installation work.
- To fully disconnect the device completely from the mains, the mains plug must be withdrawn from the mains socket.
- In order to eliminate the risk of fire, the device's mains plug should always be disconnected from the mains socket, if the device is not being used for an extended period of time.

Overload/overvoltage

- Prior to unstable weather and/or when there is a risk of lightning strike, disconnect the device from the mains network or connect the device to a UPS.
- Avoid overloading electrical sockets, extension cables and adapters, as this can result in fire or electric shock.

Cable

- Always grasp all cables by the plug connector and do not pull the cable itself.
- Never grasp the power cable with wet hands, as this can cause a short circuit or electric shock.
- Do not place the device itself, items of furniture or other heavy objects on the cable and ensure that it does not become kinked, especially at the connector plug and at the connection sockets.
- Never tie a knot in the cable and do not bundle it together with other cables.
- All cables should be laid so that they cannot be trodden on, or cause a hazard.
- Damaged power cables can cause fire or electric shock. Check the power cable from time to time.
- Do not modify or manipulate the power cable or plug.
- Only use adapter plugs or extension cables that conform to applicable safety standards, and do not interfere with the mains or power cables.

Children

- Do not allow electrical devices to be handled by children. Do not allow children to use electrical devices unsupervised. Children may not properly identify possible hazards. Small parts may be fatal if swallowed.
- Keep packaging film away from children. Risk of suffocation.
- This device is not intended for children. If used incorrectly, parts under spring tension may fly out and cause injury to children (e.g to eyes).

Installation location/operating environment

Place or mount the device on a steady, level surface and do not place any heavy objects on the device. Make sure that there is adequate ventilation (do not place the Smartvest on a shelf, thick carpet, bed or wherever the ventilation slits may be covered. Always leave a gap of at least 10 cm on all sides).

The Smartvest is not designed for operation in rooms prone to high temperatures or humidity (e.g. bathrooms) or excessive dust accumulation.

For all components only suitable for indoor use, please ensure that

- no direct heat sources (e.g. radiators) have an effect on the components
- the components are not exposed to direct sunlight or strong artificial light
- no naked flames (e.g. lit candles) are placed on or next to the components
- contact with sprayed or dripping water is avoided
- the components are not operated in the vicinity of water and, in particular, never submerged (do not place objects containing fluids, e.g. vases or drinks on or near the device)
- the components are not exposed to large temperature fluctuations, as otherwise there may be condensation from humidity which may lead to electrical short circuits

For all components that are suitable for indoor and outdoor use, please ensure that

- the components are not exposed to excessive shock or vibration
- the components are not placed in the immediate vicinity of magnetic fields (e.g. loudspeakers)
- contact with aggressive liquids is avoided
- no foreign objects are able to penetrate the components
- the operating temperature and operating humidity of the components are observed.

Please refer to the relevant quick guide, technical information and installation instructions in chapter 3 for information on proper installation and compliance with the operating environment for components.

Battery

All Smartvest components, with the exception of power switches, are or can be supplied with a battery. In order to guarantee a long lifespan and avoid fire and injury, please follow the instructions below:

- Do not dispose of the battery with household waste.
- The battery must not be directly exposed to heat or sunlight, and must not be stored in hot places.
- The battery must not be burned.
- The battery must not come into contact with water.
- The battery must not be dismantled, pierced or otherwise damaged.
- The battery contacts must not be short-circuited.
- The battery must be kept away from small children.
- The battery cannot be recharged.

Unpacking the device

Handle the device with extreme care when unpacking it.

Packaging and packaging aids can be reused and, as far as possible, should be sent for recycling. We recommend the following:

Paper, cardboard and corrugated cardboard as well as plastic packaging items should be placed in the appropriate containers provided.

If no such facility exists in the area, these materials should be put into the general household waste.

Warning

If the original packaging has been damaged, start by inspecting the device. If the device shows signs of damage, return it in the original packaging and inform the delivery service.

Start-up

Observe all safety and operating instructions before operating the device for the first time.

Warning

Improper or unprofessional work on the power supply system or domestic installations puts both you and others at risk.

Connect the installations so that the mains power circuit and low-voltage circuit always run separately from each other. They should not be connected at any point or become connected as a result of a malfunction.

Care and maintenance

Maintenance is necessary if the device has been damaged (e.g. damage to the power cable and plug, or the housing), or if liquids or foreign bodies have got into the interior of the device, or if it has been exposed to rain or damp, or if it does not work properly or has been dropped.

Maintenance

- If smoke, unusual noises or smells develop, switch the device off immediately and unplug from the socket. In such cases, the device should not be used until it has been inspected by a qualified technician.
- Have all maintenance tasks carried out by qualified technicians only.
- Never open the housing on the device or accessories. If the housing is open, there is the risk of fatal electric shock.

Cleaning

- Only clean the device housing with a damp cloth.
- Do not use solvents, white spirit, thinners etc. or any of the following substances: Brine, insect spray, solvents containing chlorine or acids (ammonium chloride), or scouring powder.
- Rub the surface gently with the cotton cloth until it is completely dry.

The device operates with a dangerous voltage level. When conducting maintenance work (e.g. cleaning), disconnect the device from the mains.

3	Voltage supply	5 V DC/1.	5 A. Device	e starts automatically when powered by line voltage.		
4	Hygrometer	Integrated	hygromete	er for measuring temperature and humidity		

Rear

		6 x AA (1.5 V) batteries for backup power supply (approx. 5h battery life)				
		Changing the battery				
1	Battery	Push the	clips to open th	he battery compartment cover.		
	operation	Remove the dead 6 AA (1.5 V) batteries from the compartment and replace with the new 6 AA (1.5 V) batteries. Make sure they are facing in the direction shown on the compartment floor, then close the battery compartment by replacing the cover.				
2	Mounting bracket	Mounting bracket for wall installation Drill hole spacing: 10 cm (drilling template provided)				
3	Loudspeaker	Smartvest loudspeaker with a maximum volume of 90db.				
	Background	Off	Off	System is "disarmed"		
		Yellow	On	The system is "disarmed" and there is a fault (e.g. battery dead or magnetic contact is "open")		
4	LEDs	Blue	On	System is "armed"		
		Red	On	System is "armed" and in the alarm state (e.g. magnetic contact open).		
5	Cabling	Cabling for power supply and network cable.				

1.2. FUHA35000 power switch

1	Schuko socket	Schuko socket type F (CEE 7/4). Can be used in the following countries: Germany, Austria, Sweden, Netherlands				
			Off	Power switch is activated; power is being transmitted.		
		Blue	On	Power switch is ready and activated; power is not being transmitted to the consumer.		
0	Status I ED		Flashing	Power switch is starting up		
e		Orange	Flashing	Repeater mode started		
			On	Power switch is ready and activated; power is not being transmitted to the consumer.		
				Repeater mode on and connected with a component.		
		Press this button once to activate or deactivate the power switch.				
3	Button	To do so mode.	, press and ho	old the button for five seconds, to activate repeater		
	Schuko socket	Schuko s	ocket type F (C	CEE 7/4). Can be used in the following countries:		
9		Germany	, Austria, Swed	den, Netherlands		

Repeater mode

As well as switching consumers, the power switch can also be used as a wireless repeater for another component. To do this, take the following steps:

- 1. Press and hold the button for five seconds to activate repeater mode. The status LED starts to flash orange.
- 2. For any components that you want to connect to the power switch, carry out the manual process for pairing components (see chapter 5, Configuration).
- 3. The status LED lights up orange when the connection is successful
- 4. To deactivate repeater mode again, first disconnect the switch. Press and hold the button. Reconnect the switch. Wait until the LED flashes blue and only then release the button. If deactivation was successful, the LED will now light up blue.

Note

It is only ever possible to connect one component to a power switch.

1.3. FUMK35000 magnetic contact

	Transmitter	Contains a wireless component				
	component	Mounted on window frame				
2	Signal I ED	Blue	Flashing	Magnetic contact is closed		
Ŭ		Diao	r laoini ig	Magnetic contact is opened		
		1x 3V but	ton battery (CF	R2032) for power supply (up to one year battery life).		
3	Battery	The Smartvest App warns you when the battery is low. Follow the instructions in the app.				
	operation	Changing the battery				
		Slide the battery compartment cover out in a downwards direction.				
		Remove the dead 3V button batteries from the holder provided and replace with a new 3V battery, then close the battery compartment by replacing the cover.				
	Magnet	Contains	a magnet com	ponent		
4	component	Mounted on window				

1.4. FUBW35000 PIR Motion Detector

1	Catch	Catch for removing the rear panel			
2	Pair button	Button for manual pairing with the Smartvest Activate test mode: press for 5 s Deactivate test mode: press for 5 s			
3	Tampering contact for alarming in the event of unwanted removal				
4	Battery operation	 3 x AA (1.5 V) batteries for power supply (up to two years battery life) The Smartvest App warns you when the battery is low. Follow the instructions in the app. Changing the battery Press the catch on the underside of the PIR Motion Detector and remove the rear panel. Remove the dead 3 AA (1.5 V) batteries from the compartment and replace with the new 3 AA (1.5 V) batteries. Make sure they are facing in the direction shown on the compartment floor, Reattach the PIR Motion Detector to the mounted rear panel. 			

Note

In test mode, the PIR Motion Detector's energy-saving mode is deactivated so it triggers each time motion is detected. Use this to check whether the detector fully covers the monitored space. Deactivate test mode after use, as otherwise this will severely affect the battery life.

1.5. FURM35000 smoke alarm/heat detector

Refer to the instructions for the smoke alarm/heat detector.

1.6. FUSG35000 siren

1	LED chamber	LED flashes (according to setting) in the event of an alarm and acknowledge changes to the siren settings.			
2	Loudspeaker Siren loudspeaker with a maximum volume of 80 db or 100 db.				
3	Pair button	Button for manual pairing with the Smartvest			
4	Tampering contact for alarming in the event of unwanted removal				
\$	Battery operation	 4 x C (1.5 V) batteries for power supply (up to two years battery life) Changing the battery Loosen both screws on the cover. You do not need to completely remove the screws. Lift the cover upwards from the bottom and remove. In order to access the screws more easily when changing the batteries, you can temporarily remove the tampering contact's rubber cover. Remove the dead 4 C (1.5 V) batteries from the compartment and replace with the new 4 C (1.5 V) batteries. Make sure that the battery is always positioned with the negative end against the spring. Place the top end of the cover into the holes provided and attach the cover beneath using the two screws. 			

1	Signal LED	Blue	Flashing	Acknowledges when button is pressed			
2	Arm button	Button Press a	Button for arming the Smartvest Press and hold for 5 seconds to switch internally armed				
3	Disarm button	Button	Button for disarming the Smartvest				
4	Camera button	Button	Button to start recording for connected cameras				
5	Panic button	Button	Button for triggering the panic alarm (press for 3 seconds)				
		1x 3V t	outton batter	y (CR2032) for power supply (up to two years battery life)			
	Battery	The Sm in the a	nartvest App ipp.	warns you when the battery is low. Follow the instructions			
6	operation	Changing the battery					
	Remove the battery compartment on the side of the			compartment on the side of the Remote Key.			
		Remov with a r Key.	e the dead 3 new 3V batte	BV button batteries from the holder provided and replace ery, Push the battery compartment back into the Remote			

Note

The exact reaction caused when a button is pressed depends on the app settings. Refer to Section 5.6, Advanced settings for the arm and disarm buttons, and Section 5.3, Hotkeys for the camera button and panic button.

2. Start-up

Before installing your Smartvest and detector, follow the steps below to start up your Smartvest and pair components with the Smartvest.

2.1. Installing the S	martvest	Арр	
	For the S download app can b devices	martvest, there i I from the Google be used on smar from this point o	s an app called "Smartvest" available for e Play Store and the iOS App Store. This tphones and tablets, referred to as "end n.
	For instal and sear	lation, go to the ch for "Smartves	Google Play Store or the iOS App Store t".
	Install the	Smartvest App	
		Note Please note th a minimum re App:	at the following operating systems are quirement for running the Smartvest
		Apple	iOS 7
		Android	4.0

2.2. Setting up the Smartvest		
e Rooter	 First connect the LAN cable provided on the underside of the Smartvest and connect this to your router, then connect the power supply unit provided. Note Ensure that the DHCP function is activated on your router as otherwise it will not be possible to connect to the Smartvest. Only start setting up the Smartvest via the app when the green power LED lights up continuously and the alarm panel beeps twice. There is no double beep sound if integrated into a local network without Internet access. 	

System auswählen 🔅	Open the Smartvest App and carry out the following steps:
(+)	Start setup
	Tap the plus sign \bigcirc to add a Smartvest. The app then automatically searches for devices on your network.
System hinzufügen Weiter Gerätekennung (DID) manuell eingeben Gerätekennung (DID) eingeben Gerätekennung (DID) eingeben Gerätekennung (DID) manuell ein und klicken Sie weiter. Die Gerätekennung (nden Sie auf der Rückseite ihrer zurer zurer zurer zurer der Rückseite ihrer zurer zur der Rückseite ihrer	Select Select your Smartvest from the list. If you want to link the Smartvest from another network or the Smartvest is not found, enter the DID manually. All further entries must then also be made manually.
System hinzufügen Weiter Gerätesicherheitscode eingeben Standard Gerätesicherheitscode 123456, Bitte ändern Sie den Gerätesicherheitscode nach dem ersten Login.	Device security code The standard security code "123456" is already stored. When setting it up for the first time, press "Next". If the device security code has already been changed, enter the correct code here.
	Standard security code: "123456" When logging in for the first time, you will asked to change the device security code.
	Note You can change the security code in the settings. If you have already changed the security code, you can enter this here manually before tapping "Next".

System hinzufügen Speichern Gerätename Smartvest Smartvest Image: Smart in the state of	 Name assignment, room and location information Assign a name to the Smartvest. The name "Smartvest" will be stored initially. Open the room list and select a room where the Smartvest is mounted. Tap the arrow to return to the previous window. To display weather information, tap the town row and search for your location using the place name or postcode and select your location from the results returned. Note The location data is used solely to ascertain weather information.
	End setup Tap "Save" to finalise the entries. You have now linked your Smartvest to the app.
	Changing the device security code during initial commissioning When completing the initial commissioning (or after resetting the alarm control panel to the default settings), you will asked to change the device security code. It must contain a minimum of 6 characters and a maximum of 16 characters. The following characters are permitted: Letters (a-z / A-Z) Digits (0-9) Special characters: + - * / % = _ ! ? @ # \$ & () , . ; : Note The security code must not be changed to "123456". You can change the device security code at any time in the settings (Advanced settings/security settings).

3. Installation

This chapter describes how to install the Smartvest and the associated components.

Please refer to chapters 4 and 5 when operating and adjusting the settings for the Smartvest via the Smartvest App.

Warning

When using adhesive pads, ensure that the surface below is clean, abrasion-resistant and dry.

On account of their properties, wallpaper and polystyrene or surfaces coated with silicone or Teflon are not suitable for the installation of the smoke alarm device.

3.1. FUAA35000 Smartvest

The Smartvest is only suitable for indoor use. For further information, please refer to the safety instructions relating to installation location and operating environment.

General installation instructions

Ensure that your Smartvest has a backup power supply before installation.

- 1. To do this, open the battery compartment cover by pressing both clips.
- 2. Remove the plastic strip.
- 3. Replace the cover.

Free-standing installation

Press the Smartvest onto the base and place the Smartvest in the desired location. The cables can be clipped onto the base to ensure they are neatly laid.

Wall installation

Stick the Smartvest drilling template to the desired installation location. Use a spirit level to ensure the drilling template is straight. Drill holes in the specified positions and insert the screw anchors provided. Screw the screws provided into the screw anchors so that the heads protrude by around 6 mm, then mount the Smartvest.

3.2. FUHA35000 power switch

The power switch is only suitable for indoor use. For further information, please refer to the safety instructions relating to installation location and operating environment.

Power switches must never be connected in series.

Installation

Plug the power switch into a socket and plug the desired consumer (e.g. a lamp) into the power switch.

3.3. FUMK35000 magnetic contact

The magnetic contact is only suitable for indoor use. For further information, please refer to the safety instructions relating to installation location and operating environment.

General installation instructions

- Always install the smaller magnet component on the window or door and the larger transmitter component on the window or door frame.
- Install the magnetic contact so that the two components are a maximum of 0.5 cm apart horizontally and 1.5 cm apart vertically.
- If in doubt, test whether the height difference on your window or door is too great by holding the two components next to each other in the desired position on the window or door and then moving the transmitter component to the window or door frame. If the blue signal LED lights up, the height difference is too great.
- To even out the height difference, use the washers provided, which need to be attached to the rear of the components. The screws provided are not compatible with washers. Either use your own screws for this or the adhesive pads provided (recommended).
- Always install the magnetic contact on the side of the window or door which is opened and not on the hinge side.
- You can either install the magnetic contact on the top or the side of the window. If you install the magnetic contact on the underside of the window, the magnetic contact may not trigger if the window is tilted (not recommended).

Installation with adhesive pads (recommended)

- 1. Stick both the small adhesive pads on to the magnetic contact's large transmitter components and the longer adhesive pad on to the smaller magnet component.
- 2. Stick the large transmitter component to the window frame in the desired position in relation to the window and stick the smaller magnet component to the window itself.

Installation with screws

- 1. Open the magnetic contact's smaller magnet component with a thin slotted screwdriver.
- 2. Remove the battery compartment cover from the magnetic contact's larger transmitter component.
- 3. Screw the smaller magnet component in the desired position on the window using two screws. You must first break through the intended holes using a screwdriver or drill.
- 4. Screw one screw into the window frame for the transmitter component's keyhole fitting.
- 5. Attach the transmitter component and fix to the window frame with the remaining screw.

3.4. FUBW35000 PIR Motion Detector

The motion detector is only suitable for indoor use. For further information, please refer to the safety instructions relating to installation location and operating environment.

General installation instructions

- Install the motion detector 2–2.5 m above the ground for a range of 12 m.
- Install the detector either flush to the wall or in a corner (recommended).
- Do not install the motion detector opposite heat sources or windows, above a radiator, close to large metallic structures, close to power cables or gas lines, close to electronic or wireless equipment, or closer than 30 mm to the ceiling.
- The detector's detection range is directed downwards. For this reason, do not tilt the detector too sharply downwards, as otherwise the range will be restricted. A horizontal, upright position is recommended.

Adhesive installation

- 1. For wall installation, stick the adhesive pads provided on to the rear of the motion detector.
- 2. For corner installation, stick the adhesive pads on to the motion detector's chamfers (angled surfaces).
- 3. Install the motion detector in the desired installation location on a flat surface.

Drill installation using bracket

- 1. Press the bracket into the motion detector.
- 2. Hold the motion detector next to the desired installation location and adjust to the desired angle.
- 3. Fix the position by tightening the screw on the rear of the bracket.
- 4. Stick the motion detector's drilling template in the desired installation location. Use a spirit level to ensure the drilling template is straight. Drill holes in the specified positions and insert the screw anchors provided.

Remove the bracket and fix it in place using the screws provided. Finally, press the motion detector back on to the bracket.

Drill installation without bracket

- 1. Press the catch on the underside of the motion detector and remove the motion detector's rear panel.
- 2. Use the holes provided on the inside of the rear panel as a drill template for wall or corner installation.
- 3. Drill the holes and insert the screw anchors provided. Next, screw the motion detector's rear panel into the wall or corner using the screws provided.
- 4. Press the motion detector back on the fitted base plate of the motion detector.

3.5. FURM35000 smoke alarm/heat detector

The smoke alarm/heat detector is only suitable for indoor use. For further information, please refer to the safety instructions relating to installation location and operating environment and to the instructions for the smoke alarm/heat detector.

Installation

Refer to the instructions for the smoke alarm/heat detector for installation.

3.6. FUSG35000 siren

The siren is suitable for indoor and outdoor use. For further information, please refer to the safety instructions relating to installation location and operating environment.

General installation instructions

Warning

The tamper contact may be triggered when installing the siren. In this event, the siren is set to "LED" by default. If you have already configured the siren as "Siren" or "LED and siren", please reset this to "LED" before installation. Otherwise, if for instance the siren's alarm tone is suddenly triggered when carrying out an installation at a great height, this could lead to a serious accident and physical injury or damage.

Alternatively, you can activate maintenance mode in order to avoid false alarms. See chapter 5 ("Configuration").

When testing the siren's acoustic alarm tone, always maintain a minimum distance of 3 m in order to avoid physical damage (e.g. to hearing).

- The siren is only suitable for use in protected outdoor areas (IP44).
- Ensure that the siren is installed within hand's reach (minimum 3 m installation height).
- When choosing the installation location, ensure that the siren can be seen and heard from a long distance.
- Pressing the tamper contact for the first time activates the tamper contact. After this, if the tamper contact is triggered, the tamper alarm is triggered.

Drill installation

1. Stick the motion detector's drilling template in the desired installation location. Use a spirit level to ensure the drilling template is straight. Drill holes in the specified positions and insert the screw anchors provided. Remove the drilling template.

Attach the A-shaped bracket to the wall using the screws.

- 2. Connect the power supply unit provided to the siren and hook the sirens into the bracket from above (click 1), then press it against the wall (click 2).
- 3. Now tighten the small screw on the underside of the bracket.

3.7. FUBE35000 Remote Key

The Remote Key is only suitable for indoor use. Note the information provided in the safety instructions relating to the operating environment.

Installation

Use the keyring to attach the Remote Key to your bunch of keys or similar.

4. Operation

The Smartvest App is divided into two basic menus, operation and configuration.

This chapter will show you how to operate the Smartvest via the Smartvest App. Please refer to chapter 5 to find out how to configure the Smartvest.

The following functions are available in the operation menu:

- overview of the most important information and functions
 - o switching the Smartvest to armed/part set/disarmed
 - Active devices
 - o faults
- overview and activation of your hotkeys
- overview of your rooms and the status of the room detectors
- overview and live view of your cameras
- overview and call contacts
- overview of events

Note

Depending on the operating system and end device used, the actual display may differ slightly from the screenshots included in this manual. In this manual, the menu overviews are illustrated using tablet screenshots, while the descriptions of the individual menu items are illustrated using smartphone screenshots. The descriptions of the menu items and navigation are however identical on each device.

4.1. Navigation bar and footer			
Übersicht Hotkeys Räun	Open the Smartvest App and connect to the Smartvest.		
Smartvest ist bereit zum aktivieren	Navigation bar <u>View</u> The individual menu items are shown in the navigation bar at the top. The menu you are currently viewing is highlighted in colour.		
	<u>Switching menu</u> You can switch between the individual menus by "swiping" your finger across the screen from left to right or vice versa. Alternatively, you can switch between the individual menus by tapping on the desired menu in the menu bar. <u>Colour code</u> The Smartvest's current status is indicated in the navigation bar using a colour code.		
Übersicht Hotkeys Räun Übersicht Hotkeys Räun Übersicht Hotkeys Räun	GreySystem is "disarmed"YellowThe system is "disarmed" and there is a fault (e.g. battery dead)BlueSystem is "armed"RedSystem is "armed" and in the alarm state (e.g. magnetic contact open, panic or tampering).		
	Footer Settings The settings symbol Image: Symbol Image		
	Temperature, humidity and weather information are displayed in the bottom right-hand corner.		
	Indoor temperature and humidity display, as measured by the Smartvest's hygrometer		
	Weather display for the location set in the Smartvest settings		
	Note The hygrometer values for indoor areas need around 30 minutes after start-up to level off.		

4.2. Overview			
	Status di	splay	
Übersicht Hotkeys Räun	Three different symbols are used to represent the different Smartvest statuses in the status display. The current status is marked in colour, with the relevant text shown below. You can change the status by dragging to the left or right or, alternatively, by tapping the desired status.		
Image: Simartwest ist interm aktiviert Übersicht Hotkeys Räun Image: Simartwest ist bereit zum aktivieren Übersicht Hotkeys Räun		Smartvest is internally armed The internal arming is pre-programmed as perimeter protection ex-works. This means that opening detectors do trigger an alarm whereas motion detectors do not. This means you can move around freely inside the house (internally) without triggering an alarm. However, the opening detector triggers an alarm if anyone enters the premises from the outside. Recommended application: Set the Smartvest to internally armed before you go to bed	
Smartvest ist aktiviert		Smartvest is unarmed (ready to arm)	
	Â	In this status, the system is not live. Notifications from most sensors do not trigger an alarm. The only exception is the smoke alarm device which, for your own safety, always triggers an alarm irrespective of the system status. In addition, an alarm is triggered if any of the components sends a sabotage message. Recommended application: Set the Smartvest to disarmed when you come home.	
	•	Smartvest is armed	
		The arming is pre-programmed as full protection ex- works. This means that all sensors trigger an alarm. Recommended application: Set the Smartvest to armed when you leave the house and there is no-one else at home.	
	Â	Note When pairing components, standard values are automatically set for the active status. Should you wish to alter the settings for the status in question, you can find the settings under point 5.5 – Advanced settings/Status configuration.	

Übersicht Hotkeys Päun	Hotkeys	
Smartvest ist bereit zum aktivieren	There are two pre-configured hotkeys – panic and camera – below the status display, which you can tap and enable in the overview. These two hotkeys are also found on the FUBE35000 Remote Key and can be operated from there.	
(1) Panik 👼 Aufnahme	()	Standard: All actuators are triggered (e.g. sirens) and all cameras are recording
	\bigcirc	All cameras are recording
	Â	Note When pairing components, standard values are automatically set for the pre-configured hotkeys. Should you wish to alter the settings for the hotkey in question, you can find the settings under point 5.3, Hotkeys.
Übersicht Hotkeys Räun	Fault

4.3. Hotkeys

Application examples

Hotkeys enable straightforward activation of various components with just a tap.

Should you become aware of any potential intruders outside your house before they have attempted to break in, you could, for example, configure a hotkey (panic) to activate the siren, which you could then tap to scare off the intruder before they break in.

Alternatively, you could create a user-defined hotkey to activate one or several power switches and switch your home lighting on and off by tapping the hotkey.

4.4. Ro	oms

5. Configuration

X Smartvest's Preference	
Manage Your Smartvest	
Components	>
Hotkeys	>
Scenarios	>
Schedules	>
Advanced System Settings	>
Contacts	>
Smartvest Manual	>
Log Out	>
After Log Out you'll be redirected to system selection, you can change app settings or select any system for log in.	

The Smartvest App is divided into two basic menus, operation and configuration.

This chapter will show you how to configure the Smartvest via the Smartvest App. Please refer to chapter 4 to find out how to operate the Smartvest.

The following can be carried out via the configuration menu:

- setting and adding components
- setting your hotkeys
- setting your scenarios
- setting your schedules
- setting the network and security parameters
- setting the arm/partial arm/disarm modes
- setting the time and firmware
- activating the test, maintenance and remote mode.

Note

Depending on the operating system and end device used, the actual display may differ slightly from the screenshots included in this manual. In this manual, the menu overviews are illustrated using tablet screenshots, while the descriptions of the individual menu items are illustrated using smartphone screenshots. The descriptions of the menu items and navigation are however identical on each device.

5.1. Configuration overview

Configuration overview

The Smartvest settings, contacts and manual are displayed in the configuration overview.

5.4. Scenarios

Application examples

Scenarios allow you to automate certain actions in your home;

for example, you can use a motion detector when a room is entered or a magnetic contact when a door is opened to switch on a light source connected to a power switch.

You could also use a motion detector or magnetic contact to start a camera recording, which allows you to always have an overview of who has entered your house and when.

Scenarios

In the list of sensors, select the components to which you would like to add a scenario.

Any number of actuators can be assigned to each sensor.

You can also manually deactivate existing configured scenarios using the ON/OFF switch on the right-hand side of the components until you want to reactivate them.

Scenario settings

Tap the plus sign to open the list of actuators. Select one or more actuators that you want to add to the sensor's scenario and tap "Save".

For power switches, you also need to select whether the power switch activates when the scenario is activated ("On") or deactivated ("Off").

By setting the TVAC19000 pan/tilt camera as an actuator, you can start a recording from 1 of 3 preset positions.

Note:

You can remove an actuator from the list by removing it from the actuator list (uncheck it).

Note:

Please make sure that no scenarios conflict

with the configuration in the event of an alarm.

Example:

If a motion detector detection switches on a radio socket in the event of an alarm, you should not create any scenario with this motion detector involving switching off the same radio socket.

5.5. Schedules

Application examples

Schedules allow you to automate certain actions in your home as well as providing presence simulation.

You can store schedules for each power switch to activate light sources that are connected to a power switch and simulate a presence when you are away, while on holiday for example.

You could also connect your Christmas lights to a power switch and activate these at night-time only using a schedule.

K Zeitpläne Funk-Steckdose Dachboden_F-S Dachboden Esszimmer_F-S Tolt Esszimmer 	Si In ya	Schedules In the list of power switches, select the power switches for which you would like to store a schedule.

Security settings

SicherheitseinstellungerSpeichern

.....

.....

.....

.....

In the security settings, you can change the security code and password for the Smartvest settings. It is strongly recommended that you change both passwords when performing the initial setup.

Device security code

Enter the old security code followed by the new one. Confirm this again, then tap "Save".

Note

The security code is automatically changed in the end device central settings where the change was carried out.

With other end devices, you must change the device security code in the general settings (see point 2.4, General settings) before you log in next time.

Password for settings

Enter the old password for the settings and then the new password for the settings. Confirm this again, then tap "Save".

Note

If you have forgotten your security code or your password for the settings, you can reset these to the standard value "123456".

To do this, press the reset button on the Smartvest using a paper clip for ten seconds (while operating); this will restore the Smartvest's factory settings. This safeguards the pairing with the components and ensures the most important settings are retained.
