BIKE SMART TRACKING

## WE DO NOT LIKE BICYCLE THIEVES!

- + Combination tail light and GPS positioning system
- + Easy installation on any bike with luggage rack
- + Automatic charging via dynamo or e-bike battery
- + Active alarms on your smartphone
- + Configured within a minute via smartphone app
- + Integrated near field tracking (via low energy Bluetooth)
- + Includes Europe-wide tracking plan – for local or holiday use
- + Made in Germany

The **velocate®** tracking system can be concealed within many existing standard tail lights.

**velocate**<sup>®</sup> Anyone who has ever been a victim of bicycle theft knows the feeling of anger and despair: Emotions exaggerated by the 1 in 10 odds of actually retrieving your bike and bringing the thieves to justice ... but fear not, with **velocate**<sup>®</sup> the tides are changing! Integrated within a standard tail light, **velocate**<sup>®</sup> is visually undetectable, but concealed within is an ingenious yet simple device containing an active alarm with a series of pinpoint tracking mechanisms in case of theft. Should the stolen bike be undetectable via GPS (eg in a basement or a garage) – no problem! The integrated Bluetooth near field tracking system provides a bearing even without GPS reception. Setting up the unit takes less than a minute via a dedicated Smartphone app that accompanies the a pan-European data plan fully included within the purchase price. \*
