

Getting started assembly instructions

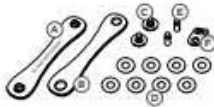

VIDEO INSTRUCTIONS:
GetKeySmart.com/Assembly

WHAT'S INCLUDED

Start by removing all KeySmart components from the packaging: front plate (A), back plate (B), 2 screws (C), spacers (D), 2 extension posts (E), loop ring (F)

Do not remove black rubber bands on the screws (C).

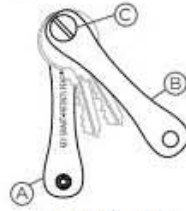

What's the loop ring for?

Glad you asked. Use it to attach fat car keys, key fobs, loyalty cards, and other bulky accessories.

SUPER QUICK ASSEMBLY

The easiest way to assemble your KeySmart is to start with just one post; add all components, add the back plate and secure with screw. Repeat with the other side.

STEP-BY-STEP ASSEMBLY →

STEP-BY-STEP ASSEMBLY

STEP 1

Place the front plate logo-side down, with posts facing up.

STEP 2

Add keys or other items, making sure keys face inward. (Use spacers between keys, if desired)

ADDING 4 KEYS

Put two keys on each post.

ADDING 6-10 KEYS

Screw an extension into each post, put up to 5 keys or items on each post.

STEP-BY-STEP ASSEMBLY

STEP 3

Make sure each side is stacked flush or above the top of the posts. (Use the spacers if needed)

STEP 4

Add the back plate and secure with screws. (do this by hand or MacGyver that thing with a coin)

STEP 5

Fold your keys into the KeySmart, then grab and go!

PRO TIPS

Odd number of keys?

Use spacers to create even sides.

Keys don't reach the top of the post? Add spacers as needed.

Want to add USB storage? Get the KeySmart flash drive. (sold separately)
