C4L6400-TWP-PI Transceiver Field Application

C4L6400-TWP-PI transceivers are used to extend the Ethernet IP signals via Cat 5E, Cat 6 or 2 wire cable in the existing UTP network in building.

C4L6400-TWP-PI transceiver could reduce the cabling costs to upgrade from the installed analog video cameras to Mega-pixel grade IP cameras with the inexpensive UTP cabling.

For the other field applications, **C4L6400-TWP-PI** transceivers could be applied to connect, distribute and convert the IP devices(IPTV, VOIP Phone, Wireless AP, etc.) signals via the UTP cable with 128bit AES Encryption and guaranteed QoS for loss sensitive application.
