

Model Number

UB100-F77-E3-V31

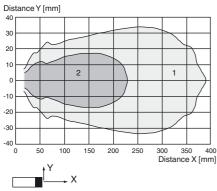

Ultrasonic direct detection sensor

Features

- Miniature design
- Program input
- Degree of protection IP67
- Switching status indicator, yellow LFD

Description of Sensor Function

The ultrasonic sensor transmits ultrasonic packets in quick succession and responds to their reflection off the detected object. The sensor has a switch output. The switching point is programmable (Teach-In). Objects beyond the taught-in switching point are not detected (background suppression).

Teach-In of Switching Point SP

To teach in a switching point, proceed as follows:

- 1. Connect the sensor and turn on the operating voltage.
- 2. Place the object to be detected at the required distance.
- Connect the teach-in input (ET) to -U_B. This can be done using the pushbutton or the controller.
 The LED will start flashing after 3 seconds to indicate that the sensor is ready to start the teach-in process (*).
- 4. Disconnect the teach-in input (ET) with -U_B. The switching point SP has now been taught in ^(*).
- (*) If no object is detected within the sensing range of the sensor, the sensor will start flashing at a faster rate. The switching point remains unchanged.
