

Phaesun Battery Box Charge Plus

500067 • 6/2015

The Charge Plus Battery Box is a combination of a durable battery box and the Eco charge controller and therefore enables any installation to be housed in a tidy professional way. It is ideal to keep a battery (up to 110 Ah) and in a dry and safe environment. The Snap-Top battery boxes are manufactured using the highest quality injection molded polypropylene plastic. They effectively collect electrolytes and allow ventilation. The secure and lockable lid prevents accidental contact of underground battery terminals. All included connectors are fitted with easy to mount Cage Clamp 2-Wires with 1 x input socket (for the solar panel), 1 x socket (for the battery) and 1 x output sockets (for the loads). The Eco solar charge controller is designed for small solar systems requiring low-battery disconnect. The Eco series is fully electronically protected and offers an LED display showing charge and load status.

Features

- Polypropylene Snap-Top battery box
- Allows ventilation
- Effectively collects electrolytes
- Eco charge controller with LED display, IP68
- Easy to mount Cage Clamp 2-Wire
- Battery Box Strap included
