Physical requirement

Test Items	Test Conditions	
Vibration	Buzzer shall be measured after being applied vibration of amplitude of 1.5 mm with 10 to 55 Hz band of vibration frequency to each three mutually perpendicular directions for 2 hours.	
Soldering Heat	Lead terminal are immersed up to 1.5 mm from Buzzer's body in solder bath of $260 \pm 5^{\circ}$ C for 3 ± 0.5 seconds, and then sounder shall be measured after being placed in natural condition for 4 hours.	

Electrical Requirements should be specified at room temperature and humidity. (Ref. Temperature: $25 \pm 3^{\circ}$ C, Humidity: $60 \pm 10\%$ RH)

Items	Specifications	Test Conditions
Sound Pressure Level	110 dB min. Continuous Tone	Input Voltage: 9.0V DC Distance: 10 cm *as per Fig. 2
Oscillating Frequency	2.5 ± 0.5 KHz	
Current Consumption	16.0 mA max.	at 9.0 VDC

3

Environmental Characteristics		
Test Items	Test Conditions	
High Temperature	After being placed in a chamber with +85 ± 2°C for 240 hours and then being placed in natural condition for 4 hours, Buzzer shall be measured.	
Low Temperature	After being placed in a chamber with -40 ± 2°C for 240 hours and then being placed in natural condition for 4 hours, Buzzer shall be measured.	
Humidity	After being placed in a chamber with 90 to 95% R.H. at $+$ 40 \pm 2°C for 240 hours and then being placed in natural condition for 4 hours, Buzzer shall be measured.	
Temperature Cycle	After being placed in a chamber at -40 \pm 2°C for 30 minutes, Buzzer shall be placed at room temperature (+20°C). After 15 minutes at this temperature, buzzer shall be placed in a chamber at +85 \pm 2°C. After 30 minutes at this temperature, buzzer shall be returned to room temperature (+20°C) for 15 minutes. After 5 above cycles, buzzer shall measure after being placed in natural condition for hours.
