- for screwing on camera tripods, ball heads, holders, etc.
- ideal for taking photos or when filming with the smartphone
- additional accessories can be mounted by using the unused 1/4 inch thread, e.g. LED lamps or microphone or microphones

Item description

Filming or photographing with the smartphone

The tripod holder for smartphones comes with two 1/4 inch threads, for problem free mounting on tripods, ball heads or other holders. The sturdy clamp with rubber coating is able to hold smartphones with a width of up to 8.5cm and provides adequate safety when mounting on a hand pod to take a selfie - on camera tripods, monopods, ball heads or other fastenings. In connection with a steadycam the adapter also provides the base base for shooting jerk-free videos with the smartphone and serves the purpose of stabilising the device when filming. The threads enable you to use the adapter for portrait and landscape formats.

Small and compact

With its small size, the holder fits into any handbag or photobag and can be quickly mounted to any 1/4 inch thread. The sturdy design ensures a long lifetime and can reliably hold large smartphones with a width of up to 8.5cm.

Technical specification
