

batterytester

Save time and money in your workshop

Quick diagnosis of the problem
Efficiency improvement in your workshop

- Europe's most common battery tester
- User friendly testing in three stages
- Unrivalled battery compatibility
- No training required
- Independent and clear test result
- To be used for purchase, sales and service applications

Some of the brands you can test with the Batterytester

Batterytester is market leader in Europe in the field of battery test equipment and is co-developed by Biketec AG (Flyer) for the e-bike industry. Our company is located near the German border in the Dutch village Zelhem.

By means of the universal test cable (+ and -) which is included into the delivery of a Batterytester, you can already test a lot of batteries where current can be measured. For certain batteries we have developed so-called Plug & Play cables and adapters so that the connection to the battery is even easier still. In addition, we offer so-called SMART cables and adapters for e.g. Bosch batteries. The use of these cables and adapters is required to discharge these batteries.

In the beginning it was only possible to test Flyer's Panasonic batteries. Today, Batterytester is a universal testing device. Batterytester can test most batteries between 6V – 48V (min3V – max60V).

Batterytester is user friendly by design and is also the only tester in the market place with an integrated printer. The test result can be easily printed from the device itself. In addition, Batterytester can be connected to a PC / laptop (Windows) and print a test report including graphs. In the battery test report the (remaining) capacity is stated.

A universal test cable, PC Software (Windows) with automatic firmware updates, Adapter cable (Adaptors to be ordered separately), USB cable and till roll paper is included in the delivery of a Batterytester.

Batterytester has a quick Return on Investment.

1. Our customers ask between Euro 20,- and Euro 50,- for a battery test;
2. A Battery test reports supports the bike shop in the sales of new e-bike batteries;
3. You save money in your workshop because of a quicker diagnosis. In case of warranty, often only the spare parts are reimbursed and not the working hours;
4. If a customer wants to trade in a used e-bike, you know that the quality of the e-bike battery forms a big part of the whole e-bike value. With Batterytester you are able to offer a fair trade-in price. Today, consumers have increasingly more knowledge (internet) and want to be treated in a professional and fair manner. A battery test report which you can show to your customer supports you in this matter;
5. When you advertise in (local) media that you can test e-bike batteries you will get more customers in your bike shop who will also buy other products;
6. Image: You are the expert on e-bike batteries and Batterytester should be part of this.
