2. INTRODUCTION

Overview

This manual covers all four TGF4000 dual channel generators. Where there are differences in the specification, the limits for the TGF4042 & TGF4082 are shown in square brackets [] after the TGF4162 & TGF4242 limits.

These programmable function/arbitrary generators use direct digital synthesis techniques to provide high performance and extensive facilities in a compact instrument. They generate a wide variety of waveforms with high resolution and accuracy.

Sine waves are produced with low distortion to 160MHz/240MHz [40MHz/80MHz]. Square waves have fast rise and fall times at up to 100MHz [25MHz]. Linear ramp waves are produced to 5MHz. Ramp and square waves also have variable symmetry.

The instruments generate high resolution, low jitter, variable edge time pulses to 100MHz [25MHz] with variable period, pulse width, pulse delay, pulse edges and amplitude. Complex custom waveforms can be generated with 16-bit [14-bit] resolution and a sampling rate of 800MSa/s [400MSa/s]. Up to four waveforms can be stored in internal memory. Waveforms can also be generated by the supplied Waveform Manager Plus V4.13 Windows application and downloaded to the instrument via USB, LAN or optional GPIB interfaces or via a USB flash drive.

Front panel operation is straightforward and user friendly with all major parameters shown at all times on the large, bright, colour LCD. All major functions can be accessed with a single key or two. The knob or numeric keypad can be used to adjust frequency, amplitude, offset, and other parameters. Voltage values can be entered directly in Vpp or as high and low levels. Timing parameters can be entered in Hertz (Hz) or seconds.

Internal AM, FM, PM, ASK, FSK, BPSK, SUM* and PWM modulation make it easy to modulate waveforms without the need for a separate modulation source. Linear and logarithmic sweeps are also built in, with sweep rates selectable from 1 μ s to 500s. Burst mode operation allows for a user-selected number of cycles at each trigger event.

LAN and USB interfaces are standard and there is full compliance to 1.5 LXI Device Specification 2016.

The instruments use a high stability temperature compensated internal oscillator and the external frequency reference input lets you synchronize to an external 10 MHz frequency standard for even greater accuracy.

*TGF4162 & TGF4242 only

3. SAFETY

Symbols

This instruction manual contains information and warnings which must be followed by the user to ensure safe operation and to retain the instrument in a safe condition.

The following symbols are displayed on the instrument and throughout the manual, to ensure the safety of the user and the instrument, all information must be read before proceeding.

Indicates a hazard that, if not avoided, could result in injury or death.

Indicates a hazard that could damage the product that may result in loss of important data or invalidation of the warranty.

NOTE

Indicates a helpful tip

EXAMPLE

Indicates an example to show further details

Terminal connected to chassis ground.

Mains supply OFF.

Mains supply ON.

Alternating current.

Safety notices

This instrument is:

- A safety Class I instrument according to IEC classification and has been designed to meet the requirements of EN61010-1 (Safety Requirements for Electrical Equipment for Measurement, Control and Laboratory Use).
- an Installation Category II instrument intended for operation from a normal single-phase supply.
- tested in accordance with EN61010-1 and has been supplied in a safe condition.
- designed for indoor use in a Pollution Degree 2 environment in the temperature range 5°C to 40°C, 20% 80% RH (non-condensing).

WARNING

Do not operate while condensation is present.

Do not operate outside its rated supply voltages or environmental range.

THIS INSTRUMENT MUST BE EARTHED.

Any interruption of the mains earth connector, inside or outside, will make the instrument dangerous. Intentional interruption is prohibited.

Any adjustment, maintenance and repair of the opened instrument under voltage must be avoided.

When connected, terminals may be live and opening the covers or removal of parts (except those that can be accessed by hand) may expose live parts.

To avoid electric shock, or damage to the instrument, never allow water to get inside the case.

If the instrument is clearly defective, has been subject to mechanical damage, excessive moisture or chemical corrosion the safety protection may be impaired and it must be withdrawn from use and returned for checking and repair.

Ensure that only fuses with the required rated current and of the specified type are used for replacement. The use of makeshift fuses and the short-circuiting of fuse holders is prohibited.

This instrument uses a Lithium button cell for non-volatile memory battery back-up; typical life is 5 years. In the event of replacement becoming necessary, replace only with a cell of the correct type, i.e. $3V \text{ Li/MnO}_2$ 20mm button cell type 2032. Exhausted cells must be disposed of carefully in accordance with local regulations; do not cut open, incinerate, expose to temperatures above 60°C or attempt to recharge.

CAUTION

Do not wet when cleaning, use only a soft dry cloth to clean the screen.

4. INSTALLATION

Mounting

This instrument is suitable both for bench use and rack mounting.

For rack mounting the protective bezels and handle/stand can be removed such that the instrument can be fitted beside any other standard 2U half-rack instrument in a 19" rack. A suitable 2U 19" rack kit is available from the manufacturers or their overseas agents.

See rack mount instructions for details on how to remove the protective bezel and handle.

Ventilation

The generator uses a fan fitted to the rear panel. Take care not to restrict the rear air exit or the inlet vents at the front (sides and underneath). In rack-mounted situations allow adequate space around the instrument and/or use a fan tray for forced cooling.

Handle/stand

The instrument is fitted with a 4-position handle/stand. Pull out both sides of the handle at the case pivot points, to free the position locking pegs, and rotate the handle from the stowed position to the required stand or handle position. Release the sides of the handle to lock it in the new position.

5. ELECTRICAL REQUIREMENTS

Mains operating voltage

This instrument has a universal input range and will operate from a nominal 115V or 230V mains supply without adjustment. Check that the local supply meets the AC input requirement given in the Specification.

Mains lead

Connect the instrument to the AC supply using the mains lead provided.

Should a mains plug be required for a different mains outlet socket, a suitably rated and approved mains lead set should be used which is fitted with the required wall plug and an IEC60320 C13 connector for the instrument end.

To determine the minimum current rating of the lead-set for the intended AC supply, refer to the power rating information on the equipment or in the Specification.

THIS INSTRUMENT MUST BE EARTHED.

Any interruption of the mains earth conductor inside or outside the instrument will make the instrument dangerous. Intentional interruption is prohibited.

6. FRONT PANEL

Overview

1 Flash drive

This is a USB Host port for the connection of flash drive which conform to the Mass Storage Class specification. FAT16 or FAT32 filing systems are accepted.

2 Colour screen

3 Power switch

4 Soft keys

The function of these keys change as the instrument is operated. The current function is shown on the LCD in a box above each key. An empty box means that the key currently has no function.

5 Setting keys

WAVES key selects the type of waveform; select from Sine, Square, Ramp, Pulse, Noise and Arb.

PARAMS (Parameters) key allows the editing of the waveform parameters.

- Mode keys

MOD (modulation), SWEEP and BURST select the operating mode. The selected key becomes illuminated. If all mode keys are unlit the mode will be continuous carrier wave.

- Menu keys

STORES key allows access to the built-in storage for waveforms and set-ups and to a connected flash drive.

UTILITY key gives access to menus for a variety of functions such as sync out set-up, power-up parameters, error message settings, frequency counter and dual channel functions.

6 Trigger/local key

TRIGGER key is used to issue a manual trigger signal. This key is also used to return to local from remote mode.

- Channel Keys

The channel keys select the channel that is to be edited. When Channel 1 is selected the parameter fields text and soft-key background will be orange and the CH1 key will become illuminated, with Channel 2 these fields will change to green and the CH2 key will become illuminated.

7 Output keys

The OUTPUT keys simply switch the selected MAIN OUT on or off. There are two OUTPUT keys, one for each channel. The key becomes illuminated when the output is on and the status tab text will change to 'On'.

NOTE

The display and key colour scheme of channel 1 is orange and channel 2 is green for ease of identification of the currently selected channel.

8 Numeric keypad

Numeric keys permit direct entry of a value for the parameter currently selected.

9 Rotary knob & directional keys

Used during numeric entry. The left and right keys move the edit position left or right and the knob increments or decrements the value of the selected digit.

NOTE

Press and hold down any key, including soft-keys, for two seconds to access the Help page for that key

10 Main out (one for each channel)

This is the 50 Ω output from main generator. It will provide up to 20V peak-to-peak e.m.f. which will yield 10V peak-to-peak into a matched 50 Ω load. To maintain waveform integrity only 50 Ω cable should be used and the receiving end should be terminated with a 50 Ω load. It can tolerate a short circuit for 60 seconds.

CAUTION

Do not apply an external voltage to this output.

Channel 2 can also be configured to output Channel 1 sync from its MAIN OUT 2 socket. See 'Sync output' for more details.

7. REAR PANEL

Connections overview

(1)AC power inlet

2 Mod in

This is the external modulation input socket for AM, FM, PM, SUM or PWM. Full-scale input is $\pm 2.5V$, frequency DC to 5MHz.

CAUTION

Do not apply an external voltage exceeding ±5V.

3 Ref / count (ac) in

Input for an external 10MHz reference clock and AC coupled external frequency measurement. Input range 100mVpp - 5Vpp.

Do not apply external voltages exceeding ±10V to this signal connection.

4 Ref out

Buffered version of the 10MHz clock currently in use (internal or external). Output level nominally 3V logic from 50 Ω .

CAUTION

Do not apply external voltages to this output.

(5) Trig / count (dc) in

This is the external input for ASK, FSK, BPSK, triggered sweep, gated burst, triggered burst and DC coupled external frequency measurement. Threshold is typically 1.2V and input sensitivity is 100mVpp.

Do not apply external voltages exceeding + 5V or -1V to this signal connection.

6 LAN

The LAN interface is designed to meet LXI 1.5 LXI Device Specification 2016. Remote control using the LAN interface is possible using the TCP/IP Socket protocol. The instrument also contains a basic Web server which provides information on the unit and allows it to be configured. Since it is possible to misconfigure the LAN interface, making it impossible to communicate with the instrument over LAN, a LAN Configuration Initialise (LCI) mechanism is provided via the user interface to reset the unit to the factory default.

Further details are given in the Remote Operation chapter. For more information on LXI standards refer to <u>www.lxistandard.org</u>

(7) USB

The USB port accepts a standard USB cable. If the USB driver has been installed from the website, the Windows plug-and-play function should automatically recognise that the instrument has been connected. See the support page on the website for information on installing the driver on a PC at <u>www.aimtti.com</u>.

Further details are given in 'Remote operation'.

(8) GPIB (IEEE–488) - optional

The GPIB interface is not isolated; the GPIB signal grounds are connected to the instrument ground.

The implemented subsets are:

• SH1 AH1 T6 TE0 L4 LE0 SR1 RL1 PP1 DC1 DT1 C0 E2

The default GPIB address is 5.

Further details are given in 'Remote operation'

8. GETTING STARTED

Using this manual

This section is a general introduction to the organisation of the instrument and is intended to be read before using the generator for the first time.

In this manual front panel keys and sockets are shown in capitals, e.g. SWEEP, MAIN OUT; all soft-key labels, entry fields and messages displayed on the LCD are shown in a different type-font, e.g. **Offset, Sine.**

Switching on

Connect the instrument to the AC supply using the mains lead provided.

Press the power button, at power up the generator displays a start-up message whilst initialising the application

if an error is encountered the message

Firmware Update / Battery Fail. Initialised to factory default state.

will be displayed, see 'Information, warning and error messages'

Loading takes a few seconds, after which the carrier waveform set-up screen is displayed.

WARNING

To fully disconnect from the AC supply, unplug the mains cord from the back of the instrument or switch off at the AC supply outlet; make sure that the means of disconnection is readily accessible. Disconnect from the AC supply when not in use.

Screen layout

Once powered up the following screen will appear showing the generator parameters set to their default values, with the MAIN OUT output set to off. Refer to 'Utility Operations' for how to change the power up settings to either those at power down or to the defaults.

Both channel tabs are displayed simultaneously, the selected channel is indicated by a specified coloured tab for easy identification; channel 1 is orange and channel 2 is green. Any channel specific set parameters will always be shown in the specified colour for that channel. System settings will be neutral in white, editing is also shown in white. The default layout shows the details of the selected channel side by side, three screen layout options are available see 'Display options' for further details.

Sine Off	Sine Off		
Frequency: Amplitude: Offset:	10.0000kHz 1.000 Vpp +0.000 Vdc	\square	
Load: Phase: Range: Output:	50 Ω +0.000 ° Attn Auto Normal	4	A
CH1 Main M	lenu	in the second	
	10.000 00	00 000kHz	
Freq 🕳	Ampl Offset		Output

Status line

The Status Line indicates the status of the instrument, see 'Status line details' for further information.

Parameters boxes

Shows the waveform parameter settings for the selected channel. These always include **frequency**, **amplitude** and **offset**. Additional parameters shown will depend upon the waveform type.

Graph box

Shows a representation of the waveform which the instrument is generating on the selected channel. The parameter currently being edited is indicated by arrows.

Edit box

Shows the value of the parameter currently being edited on the selected channel. This will be a numeric value or a parameter string.

Soft-key labels

Change as editing proceeds.

Status line details

Channel tabs

The channel fields contain two types of information, selected waveform (e.g. Sine) and signal status (On or Off). If tracking is selected, the Channel 2 field will be replaced with Tracking CH1, if tracking with inversion is selected the field will show InvTracking CH1. The only other exception is when calibrating the instrument, the tab will show Calibrating CH1 or Calibrating CH2 in the specific channel tab.

Clock status

The next field indicates the external clock status.

If the internal clock is being used, •

Ł is displayed alongside INT REF.

ΨL.

- έL If an external clock is being applied or is being used, •
- appears alongside EXT REF.

INT REF is followed by

- If an external valid clock signal is detected (but not used), • EXT DET.
- If the clock source is set to external and a valid external clock signal is not detected, the internal clock will be used by default and displayed followed by EXT ERR.

See 'Reference clock source' for further details on clock source.

Remote status

When the instrument is under remote control via any interface REM will be displayed.

The LAN field in the Status Line can show multiple status indications:

- пп
- There is no LAN connection, for example no cable connected. When the system is attempting to connect the icon will flash.

Successfully connected with remote control enabled.

Connected but remote control is disabled.

Unsuccessful attempt to connect.

Display options

Three different screen layout options are available, see 'Utility Menu' for details on how to change the display format.

Layout 1: (Default) Shows both the parameters and the graph for the selected channel.

Sine Off	Sine Off		
Frequency: Amplitude: Offset:	10.0000kHz 1.000 Vpp +0.000 Vdc	\square	
Load: Phase: Range: Output:	50 Ω +0.000 ° Attn Auto Normal		
CH1 Main M			
)0 000kHz	
Freq 🧅	Ampl Offset		Output

Layout 2: Shows the parameters for both channels simultaneously.

Sine Off	Sine Off		 0
Frequency:	10.0000kHz	Frequency:	10.0000kHz
Amplitude:	1.000 Vpp	Amplitude:	1.000 Vpp
Offset:	+0.000 Vdc	Offset:	+0.000 Vdc
Load:	50 Ω	Load:	50 Ω
Phase:	+0.000 *	Phase:	+0.000 *
Range:	Attn Auto	Range:	Attn Auto
Output:	Normal	Output:	Normal
CH1 Main M	lenu		
	10.000 0	100 000kH	z
Freq 🚽	Ampl Offset		Output

Layout 3: Shows the graphs for both channels simultaneously.

Numeric editing

Any numeric parameter may be changed in one of the following ways:

- Enter a new value from the numeric key pad.
- Use the left and right cursor keys to select a digit position then use the knob to increment/decrement the value at that position.

Using the numeric key pad

Pressing a number key will erase the current parameter value in the Edit Box and replace it with the current entry. The Soft-key Labels will also change to a list of units applicable to the parameter being edited.

The examples below show frequency units and period (time) units respectively.

			5		
uHz	mHz	Hz	kHz	MHz	Cancel
		2	.55		
	ns	US	ms	S	Cancel

During the numeric data entry, a decimal point and, if appropriate, a sign may be entered. The +/- key is used to alternately change the sign between + and -. The left cursor key may be used to erase the last digit entered. The entry may be cancelled by pressing the **Cancel** key

Once the entry is complete it may be terminated by pressing the soft-key below the required units. The value will be checked and accepted as the new value for the relevant parameter.

Numeric editing

With the edit cursor positioned at the required digit the knob may be rotated left or right to decrement or increment the digit. As the value passes between 9 and 0 the digits to the left will also change. In this way it is possible to set any legal value for the parameter.

NOTE

Changes made by turning the knob are applied immediately to the parameter as long as the value remains legal.

Editing principles

The instrument parameters are edited using the keyboard in conjunction with the Soft-key Labels and the Edit Box.

Generally, the required parameter is selected by pressing WAVES, PARAMS or MOD or soft-keys or a combination of these to show the parameter in the Edit Box. The parameter is then edited using the numeric keys, the soft-keys, the knob and cursor keys or a combination of these.

EXAMPLE	
	Press the WAVES key to select the waves menu, followed by the square soft-key to select the square-wave. Press the Duty soft-key to select the square-wave duty cycle parameter which will show in the Edit Box. Now use the numeric keys and Soft-keys to change the parameter as described in 'Numeric editing'.
	Press the WAVES key to select the waves menu, followed by the sine soft-key to select sinewave then press the MOD key to access modulation parameters. Press the Type soft-key to select the modulation type parameter. Use the soft-keys to select the required type from AM, FM, PM, ASK, FSK, SUM or BPSK. Press the Done soft-key to exit the menu. Press the On/Off soft-key to turn on modulation.

• Press the WAVES key to select the waves menu, followed by the **arb** soft-key to select arbitrary waveforms, followed by the **Waves** soft-key. Now select one of the built-in waveforms from the soft-keys. The Edit Box will show the loaded waveform.

Information, warning and error messages

Three classes of message are displayed on the screen in a Pop-up Box:

INFORMATION messages are shown to inform the user of actions that are being taken, for example:

Please wait... the current settings are being saved

WARNING messages are shown when the entered setting causes some change which the user might not necessarily expect. For example:

With square-wave selected at 1MHz and a Duty cycle of 25%, select sinewave and change the frequency to 100MHz. Then select square-wave again and the message **Square symmetry set to default 50%** will pop up.

ERROR messages are shown when an illegal setting is attempted, most generally a number outside the range of values permitted. In this case the entry is rejected and the parameter setting is left unchanged.

EXAMPLE

- Entering a frequency of 10MHz for a ramp waveform. The error message "Frequency / Period invalid for Ramp. Frequency Upper limit 5.00MHz. Period lower limit 200.00ns" is shown.
- Entering a sinewave amplitude of 25Vpp. The error message "Invalid entry. Amplitude Upper limit [VALUE]" is shown
- Entering a DC offset of 20V on a sinewave with an amplitude of 1.000 Vpp. The error message "Invalid entry. Offset Upper limit [VALUE]" is shown.

The messages are shown on the display for approximately four seconds; however, pressing any key will immediately remove the Pop-up Box and execute the function of the key which is pressed. The last two messages can be viewed again by pressing the UTILITY, then **Help** key and selecting the first or second entries from the Help menu, see 'Help Operations' for more information.

Each warning and error message is accompanied by a beep. The beep may be enabled or disabled in the UTILITY menu, under **System**. See 'Beep state' for more information.

General soft-keys

as BACK and will move the soft-key labels and Edit Box up one level in the hierarchy.

The \Rightarrow soft-key indicates that there are more options to show, press this key to show them.

Sine On	Sine Off		 0
Frequency: Amplitude: Offset:	10.0000kHz 1.000 Vpp +0.000 Vdc		
Modulation: ASK Rate: Hop Freq: Polarity:	ASK 1.00000kHz 500m∨pp Positive		VVI
CH1 Modulat	tion Type Menu		
	Amplitude	Shift Keyin	g
AM	FM PM	ASK 🖬	Done

In this case there is one more list of options which will show when the \Rightarrow soft-key is pressed. One more press of the 🏓 soft-key will show the first list again.

The Done key will move back to the top level in the hierarchy.

Freq When a soft key features a triangle, successive presses will give further options.

Maintenance

The Manufacturers or their agents overseas will provide a repair service for any unit developing a fault. Where owners wish to undertake their own maintenance work, this should only be done by skilled personnel in conjunction with the service guide which may be obtained directly from the Manufacturers or their agents overseas.

Cleaning

If the instrument requires cleaning, use a cloth that is only lightly dampened with water or a mild detergent.

To avoid electric shock, or damage to the instrument, never allow water to get inside the case. To avoid damage to the case never clean with solvents.

9 - Continuous Carrier Waveform Operation

Waveform selection

9. CONTINUOUS CARRIER WAVEFORM OPERATION

Seven types of carrier waveform can be generated:

- Sine
- Square
- Ramp
- Pulse
- Noise
- PRBS
- Arbitrary

This section deals with the use of the instrument as a simple function /arbitrary generator, i.e. generating sine, square, ramp and arbitrary waveforms continuously with no modulation.

Waveform selection

Pressing the WAVES key followed by any of the carrier waveform soft-keys, sine, square, ramp, pulse, noise or arb, will immediately switch to that waveform making it available at the MAIN OUT connector if the output is on, indicated by the OUTPUT key becoming illuminated. If the output is not on press the OUTPUT key to turn output on.

The screen below shows the effect of pressing the WAVES key followed by the ramp soft-key.

Ramp On	Sine Off		
Frequency: Amplitude: Offset: Symmetry: Load: Phase: Range: Output:	10.0000kHz 1.000 Vpp +0.000 Vdc 50.00 % 50 Ω +0.000 ° Attn Auto Normal		
CH1 Main	Menu		
		00 000kHz	
Freq 🚽	Ampl Offset	Symm	Output

The orange channel 1 indicator tab shows that the waveform is set to ramp and the Graph Box has changed to show the ramp waveform.

Waveform editing

Waveform editing

Frequency

Pressing the **Freq** soft-key while it is highlighted will change the label to **Period** and time units will be used to edit the parameter.

NOTE The upper frequency limits vary for the different waveform types; see 'Specification' for details.

Amplitude

Press WAVES key to return to waves menu and select a **sine** wave. Pressing the **Ampl** soft-key shows the amplitude parameter in the Edit Box and the Graph Box changes to show that amplitude is being edited.

The amplitude can be set in terms of peak-to-peak Volts (Vpp) from the **Ampl** soft key, to set high and low levels see 'High level and low level'. The level can be set assuming that the output is either open-circuit or terminated.

NOTE

The actual generator output impedance is always 50Ω ; the displayed amplitude values for other load values take this into account.

9 - Continuous Carrier Waveform Operation

Waveform editing

DC offset

Pressing the **Offset** soft-key shows the dc offset parameter in the Edit Box and the Graph Box changes to show that offset is being edited.

High level and low level

The instrument allows the amplitude and offset parameters to be entered in terms of high level and low level. Pressing either the **Ampl** or **Offset** soft-key while it is highlighted will switch the mode from amplitude/offset to high/low level. To return to amplitude/offset mode press the highlighted **HiLvl** or **LoLvl** soft-key.

With high/low level mode selected the edit box shows the parameter, the Parameters Box shows High Level and Low Level in place of Amplitude and Offset and the Graph Box changes to show the parameter which is being edited.

Sine On	Sine Off		
Frequency: High Level: Low Level:	10.0000kHz +500.0mV -500.0mV	\square	
Load: Phase: Range: Output:	50Ω +0.000° Attn Auto Normal		
CH1 Main M		.0mV	
Freq	Hilvi 🚽 Lolvi	.0IIIV	Output

Square-wave duty cycle

Square-wave duty cycle

With square-wave as the selected waveform, pressing the **Duty** soft-key shows the duty cycle parameter in the Edit Box and the Graph Box changes to show that duty cycle is being edited.

Square On	Sine Off		
Frequency: Amplitude:	10.0000kHz 1.000 Vpp		
Offset:	+0.000 Vdc		
Duty:	50.000 %		
Load:	50 Ω	4 p	
Phase:	+0.000 *		
Range:	Attn Auto		
Output:	Normal		
CH1 Main	Menu		
	50.0	00 %	
Freq	Ampl Offset	Duty	Output

Ramp symmetry

Ramp symmetry

With ramp as the selected waveform pressing the **Symm** soft-key shows the symmetry parameter in the Edit Box. The Ramp waveform in the Graph Box will change to show a representation of the shape when the symmetry is being edited.

NOTE

To produce a triangle waveform set the symmetry to 50%.

Output

Pressing the **Output** soft-key allows access to control the output parameters.

Phase

In the **Output** menu, press the **Phase** soft-key to change the start phase of the waveform. The phase parameter will appear in the Edit Box.

Ramp On	Sine Off		 0
Frequency: Amplitude: Offset: Symmetry: Load: Phase: Range: Output:	10.0000kHz 1.000 Vpp +0.000 Vdc 50.00 % 50 Ω +120.000 " Attn Auto Normal		
CH1 Output	Menu		
Phase	+ 120 . Type Range	.000 ° Load Alig	n Done

The setting may be used to determine the phase difference between the two channels or between channel 1 waveform and its carrier sync. The channels may be phase aligned by pressing the **Align** soft-key. The Phase parameter is also used to set Burst Phase.

Output type

Pressing the Type soft-key on the Output menu will alternate between Normal and Inverse.

Ramp On	Sine Off		
Frequency: Amplitude: Offset: Symmetry: Load: Phase: Range: Output:	10.0000kHz 1.000 Vpp +0.000 Vdc 50.00 % 50 Ω +120.000 * Attn Auto Inverted		
CH1 Output	Menu		
Phase	Output Ty Type 🗸 Range	pe: Inverse	

Inverse will invert the carrier waveform at the MAIN OUT connector. The output is set to **Inverted** in the parameters box and the carrier waveform in the Graph Box will be inverted.

սւբսւ

Range

Pressing the Range soft-key will alternate between Auto and Hold.

The instrument, by default, is in Auto mode; it auto-ranges in 6dB attenuator steps (i.e. 'range' maximums of 10Vpp, 5Vpp, 2.5Vpp, etc., into 50 Ω), With range set to Auto the amplifiers and attenuators will switch automatically for optimal performance, providing best amplitude resolution, noise and accuracy.

Ramp On	Sine Off		
Frequency: Amplitude: Offset: Symmetry:	10.0000kHz 1.000 Vpp +0.000 Vdc 50.00 %		
Load: Phase: Range: Output:	50 Ω +120.000 ° Attn Auto Inverted		Protonouton
CH1 Output	Menu		
		: Auto	
Phase	Type Range 🗸	Load Alig	in Done

Selecting Hold mode disables auto-ranging; the attenuator setting is fixed for the unit's maximum amplitude. This can be useful in eliminating momentary disruptions in the output waveform in Auto mode caused by the switching of the attenuators while changing the amplitude. However, waveform quality will start to deteriorate at lower amplitudes.

Ramp On	Sine Off		
Frequency: Amplitude: Offset: Symmetry: Load: Phase: Range: Output:	10.0000kHz 1.000 Vpp +0.000 Vdc 50.00 % 50 Ω +120.000 ° Attn Hold Inverted		
CH1 Outpu	it Menu	A	
Phase	Rang	e: Hold Load Alig	gn Done

With range set to Hold a fixed attenuator setting is used for all amplitude settings. The Range field in the Parameters Box will show Attn Hold while range is held.

9 - Continuous Carrier Waveform Operation

Output

Load

Pressing the Load soft-key will show the current load value in the Edit Box.

This is the value that is assumed to be loading at the instrument MAIN OUT connector. The value is used to calculate the actual values of amplitude and dc offset.

Ramp On	Sine Off		
Frequency: Amplitude: Offset: Symmetry: Load: Phase: Range: Output:	10.0000kHz 1.000 Vpp +0.000 Vdc 50.00 % 50 Ω +120.000 * Attn Hold Inverted		
CH1 Outpu	it Menu		
Phase	50 Type Range	Ω Load 🚽 Alig	gn Done

NOTE

The output impedance of the instrument MAIN OUT connector is fixed at 50 Ω .

Pressing the Load soft-key will alternate between High-Z and the last value entered. With High-Z selected the load impedance will be assumed infinite and 'High-z' will appear in the parameters box.

Ramp On Sine Off

Press the Done soft-key to return to the top-level waveform menu.

TGF4000 Series Instruction Manual

Arb waves

Arb waves

The instrument contains a total of sixteen arbitrary waveforms, Twelve fixed:

- Exponential Rise (ExpRis)
- Exponential Fall (ExpFal)
- Logarithmic Rise (LogRis)
- Logarithmic Fall (LogFal)
- Sinc (Sinc)
- Gaussian (Gauss)
- Lorentz (Lrntz)
- D- Lorentz (DLrntz)
- HaverSine (HvrSin)
- Cardiac (Crdiac)
- DC (DC)
- Triangle (Triang)
- Four user defined.
- There are more waveforms available on the website: <u>www.aimtti.com</u>

With **Arb** as the selected waveform, pressing the **Waves** soft-key switches to the Arb **Waves** menu. The name of the selected arb is shown in the Edit Box and the Graph Box shows the arb waveform.

Exp. Rise C	n Sine Off)
Frequency: Amplitude: Offset:	10.0000kHz 1.000 Vpp +0.000 Vdc		
Load: Phase: Range: Output:	50 Ω +0.000 ° Attn Auto Normal		
CH1 Arb S	hape Menu	-	
	Exponen	tial Rise	
ExpRis	ExpFal LogRis	LogFal 🚽	Done

The soft-keys allow access to all of the arbitrary waveforms in the instrument.

To select an arbitrary waveform, press the appropriate soft-key.

Arb waves

Pressing the DC soft-key followed by the Done key, produces a dc only waveform at the MAIN OUT connector.

The screen shows the result of selecting an Arb waveform with DC as the selected waveform.

DC On	Sine Off			
Frequency: Amplitude: Offset:	Not Applicable Not Applicable +0.000 Vdc	T		
Load: Phase: Range: Output:	50 Ω Not Applicable Attn Auto Normal	*

Edit		ARB1		
User1	User2 User3	User4	Edit	Done

The instrument is capable of performing simple editing of stored arbitrary waveforms. For more complex editing and creation of waveforms see the Waveform Manager Plus V4.13 Windows application, available on the website: <u>www.aimtti.com</u>

The name of the arb selected for editing is shown in the edit box. To select an arbitrary waveform for editing press the appropriate soft-key.

The selected waveform is edited by pressing the Edit soft-key. For a full description of the editing capabilities see 'Editing Arbitrary Waveforms'. Press the Done soft-key to return to the top-level Arb menu.

Harmonics (TGF4162 & TGF4242 only)

Pressing the \mbox{Arbs} soft-key and then \mbox{Hrmonc} soft-key opens the harmonic waveform submenu.

Exp. Rise O	ff Si	ne Off			
Frequency: Amplitude: Offset: Load: Phase: Range: Output:	1.000 +0.00 50 £	00 ° Auto		/	
Harmonics L	ocation	Select Mei	nu	_	
Locatio	n		ARB1		
User1	User2	User3	User4	Edit	Done

The instrument is capable of creating waveforms by the addition of sine wave harmonics. Up to 16 harmonics can be used, chosen from up to the 50th order. The amplitude and phase can be individually set for each harmonic. Harmonic waveforms can also be created or edited in the Waveform Manager Plus V4.13 Windows application supplied on the website: <u>www.aimtti.com</u>

The created harmonic waveform will be stored in one of the four user-defined arbitrary waveform locations. The name of the arb selected for storing the harmonic waveform is shown in the Edit Box. To select an arbitrary waveform location for storing the harmonic waveform press the appropriate soft-key. For a full description of the harmonic waveform capabilities see 'Harmonic Waveforms'.

NOTE

Any previous waveform stored in the same location will be erased.

Press the Done soft-key to return to the top-level Arb menu.

Filter (TGF4162 & TGF4242 only)

Pressing the Arbs soft-key and then Filter soft-key opens the arbitrary waveform filter menu.

Exp. Rise Of	f Sine Off		
Frequency:	10.0000kHz		/
Amplitude: Offset:	1.000 Vpp +0.000 Vdc		
Load:	50 Ω		
Phase:	+0.000 *		
Range:	Attn Auto		
Output:	Normal		
CH1			
L	ow BW - 62	.5MHz (-3)	dB)
Step N	lormal	a second s	Done

The instrument includes two filters to smooth transitions between points as arbitrary waveforms are generated. The Step filter has a nearly ideal step response, but with more roll-off in its frequency response than the Normal filter. The Normal filter has a wide, flat frequency response, but its step response exhibits overshoot and ringing.

The current filter band-width is shown in the Edit Box. To select between the two available filters, press the appropriate soft-key.

Press the Done soft-key to return to the top-level Arb menu.

Sync output

Channel 2 can be configured to output Channel 1 sync from its MAIN OUT 2 socket. Sync is a multi-function output which is automatically selected based on the current instrument set-up. Alternatively, user can choose Sync to always be carrier referenced, to output the currently used trigger signal or turn it off.

•	Carrier Sync:	A square wave at the same frequency as the carrier waveform. Available for all waveforms except Noise.
•	Modulation Sync:	A square-wave at the same frequency as the internal modulation waveform with a duty of 50%. Not available for external modulation.
•	Sweep Sync:	A square wave at the sweep rate.
•	Burst Sync:	A square wave coincident with a burst output.
•	Trigger:	A buffered version of the Trigger signal.

The selection of the signals themselves and configuration of channel 2 as channel 1 sync is discussed in the 'Utility Menu'. By default, the automatic selection is enabled which will choose the most relevant output for the instrument set-up. However, it is possible to override the automatic setting. See 'Utility Menu' for more information.

10. PULSE GENERATOR

Pulse application

The pulse generator can produce a wide range of pulses with adjustable period, width, and edge speed. It may also be set in Gated or Burst mode or modulated using PWM; for more information see 'Modulation' section and 'Burst' section.

Each channel has an independent pulse generator. These may be set to any combination of period, width and modulation or burst. However, when the channels are linked by one of the dual-channel functions there are some restrictions between the parameters of the two channels; see the Dual-Channel Operations in 'Specification' for details.

Pressing the WAVES key followed by the **Pulse** soft-key will switch to the pulse waveform. The screen below shows the effect of selecting pulse.

Pulse Off	Sine Off			.: 0
Frequency:	10.0000kHz			
Amplitude:	1.000 Vpp			
Offset	+0.000 Vdc			
Duty:	50.000 %	4		
Rise: 10.0ns				
Fall:	10.0ns			
Delay:	0.000000 s			
Output:	Normal			
CH1 Main	Menu			
	10.000	000kHz		
PlsFrq -	Ampl Offset	Duty	More	Output

The **PlsFrq** soft-key allows setting of the pulse frequency. Pressing the key while it is highlighted will change it to **PlsPer** and the pulse period may be entered. The pulse generator uses its own value for pulse frequency/pulse period. Changing it will not affect the frequency/period value of the other carrier waveforms.

Pulse Off	Sine Off	FL INT	 0
Period:	100.0000us		
Amplitude:	1.000 Vpp		
Offset:	+0.000 Vdc		
Duty:	50.000 %		
Rise: 10.0ns		4	→
Fall:	10.0ns		
	0.000000 s		
Delay: Output:	Normal		
CH1 Main	Menu		
	100.00)0 Ous	
PlsPer -	Ampl Offset	Duty Mo	ore Output

Amplitude and dc offset are adjusted in the same way as for sine waves and they may also be set in terms of high level and low level.

Pressing the Duty/Width soft-key allows the pulse duty or width to be set.

Pulse width

Pressing the **Duty** soft-key while it is highlighted changes the editable parameter to **Width**, the **Width** parameter is shown in the Edit Box in terms of time (ns, μ s, ms, or s) The value represents the time from the mid-point of the rising edge to the mid-point of the falling edge, the Graph Box changes to show that width is being edited and the value is shown in the parameters box.

Pulse Off	Si	ne Off			 0
Period:		0000us			1
Amplitude:		Vpp			
Offset:		00 Vdc			
Width:)00us	4		
Rise: 10.0ns					
Fall:	10.0r				
Delay:		0000 s			
Output:	Norn	nal			1
CH1 Main	Menu		-		
		50.00	0 Ous		
PlsPer	Ampl	Offset	Width 🚽	More	Output

Pressing the Width soft-key while it is highlighted changes the editable parameters to Duty, the Duty parameter is shown in the Edit Box as the width of the pulse as a percentage of the period to a maximum resolution of 0.01%, the Graph Box changes to show that width is being edited and the value is shown in the parameters box.

Pulse Off	Sine	e Off			
Period:	100.00	00us			1
Amplitude:	1.000	Vpp			
Offset:	+0.000	Vdc			
Duty: 50.000 % Rise: 10.0ns		%			
Fall:	10.0ns				
Delay:	0.0000	00 s			
Output:	Norma				
CH1 Main	Menu	A 1. 197			
		50.00	00 %		
PlsPer	Ampl	Offset	Duty 🚽	More	Output

Edge times

To amend edge times, press the More soft-key to show more options and select Edge.

Pulse Off	Sine Off	FL INT	
Period: Amplitude: Offset: Duty: Rise: Fall: Delay:	100.0000us 1.000 Vpp +0.000 Vdc 50.000 % 10.0ns 10.0ns 0.000000 s	4	
Output:	Normal		
CH1			
	10.	Ons	
Mode	Edge	Delay	Done

The edge time represents the time between the 10% and 90% points on the pulse edges. Rise time and fall time can be coupled or adjusted independently.

Pressing the Mode soft-key toggles between Independent or Coupled mode. When Coupled mode is selected the Edge soft key is available, this edits both rise and fall parameters together. When selecting Independent mode, Edge is replaced by with two soft-keys; Rise and Fall and these parameters can be edited independently. The graph box changes to show the parameters being edited.

Pulse Off	Sine Off		 0
Period:	100.0000us		*********
Amplitude: Offset:	1.000 Vpp +0.000 Vdc		
Duty:	50.000 %	-	·····
Rise:			
Fall:	10.0ns		
Delay:	0.000000 s		
Output:	Normal		
CH1			
	Indepe	endent	
Mode 🚽	Rise Fall	Delay	Done

The parameters box will show Rise and Fall at all times, the values will change depending on whether coupled or independent mode has been selected.

Pulse delay

Pressing the **Delay** soft-key shows the delay parameter in the Edit Box, the Graph Box changes to show that delay is being edited and the **Delay** setting is shown in the parameters box.

Pulse Off	Sine Off		
Period:	100.0000us		1
Amplitude:	1.000 Vpp		00111010101010101010101010101010101010
Offset	+0.000 Vdc		
Duty:	50.000 %	-	
Rise:	10.0ns	4	l.
Fall:	10.0ns		
Delay:	0.000000 s		Ī
Output:	Normal		
CH1			
	0.000 000) 000 0 s	
Mode	Rise Fall	Delay	Done

The Graph box shows the delay parameter between the arrows.

Delay can be specified in terms of time (ns, us, ms or s) Changing the delay causes the start of the pulse to be delayed with respect to the sync pulse available at the SYNC OUT connector.

The delay also adds a delay between the trigger signal and the pulse output during burst modes. See 'Burst' for more details of Burst and Gate modes. The delay also changes the relative timings of the pulses in dual channel modes.

11. NOISE GENERATOR

The instrument contains a wide-band Gaussian white noise generator for each channel which may be used in the following ways:

- As the main output from the carrier wave generator
- As a modulating waveform
- Added as a percentage to the current output waveform using SUM modulation.

These options are described in the following sections. In dual channel mode there are some restrictions on Noise; see Dual-Channel Operations in 'Specification' for details.

Carrier wave noise

Pressing the WAVES key, followed by the **Noise** soft-key will switch to the Noise/PBRS function and show the screen below.

Noise On	Sine Off		
Frequency:	Not Applicable	4	
Amplitude:	1.000 Vpp	ALC L CONSTR	diama dia 100

Output:	Normal	+	
CH1 Main I	Menu	i la compañía de la c	
	1.000) Vpp	
	Ampl - Offset	Source	Output

It is possible to edit these parameters in terms of high level and low level by pressing the Ampl key.

Pressing the **Source** soft-key shows the following and allows either noise or the PRBS function to be selected. Press **Noise** to select the Noise function. Press **Done** to exit the **Source** menu.

High level and low level

The instrument allows the amplitude and offset parameters to be entered in terms of high level and low level. Pressing either the **Ampl** or **Offset** soft-key while it is highlighted will switch the mode from amplitude/offset to high/low level. To return to amplitude/offset mode press the highlighted **HiLvl** or **LoLvl** soft-key.

Noise On	Sine Off		
Frequency: High Level: Low Level:	Not Applicable +500.0mV -500.0mV		
Load: Phase: Range: Output:	50 Ω Not Applicable Attn Auto Normal		
CH1 Main M	enu		
	-500	.0mV	
	Hilvi Lolvi 🚽	Source	Output

With high/low level mode selected the edit box shows the parameter, the Parameters Box shows High Level and Low Level in place of Amplitude and Offset and the Graph Box changes to show the parameter which is being edited

Noise modulation

Noise may be used as a modulation shape in the same way as sine or ramp etc. Noise can also be used as a carrier wave for amplitude and sum modulation and for amplitude shift keying. See 'Modulation' for more information.

12. PRBS GENERATOR

(TGF4162 & TGF4242 only)

The instrument contains a PRBS (Pseudo Random Binary Sequence) generator for each channel which may be used in the following ways:

- As the main output from the carrier wave generator
- As a modulating waveform

These options are described in the following sections. In dual channel mode there are some restrictions on PRBS; see Dual-Channel Operations in 'Specification' for details.

Carrier wave PRBS

Pressing the WAVES key, followed by the **Noise** soft-key will switch to the Noise/PBRS function. Pressing the **Source** soft-key shows the following. Press **PRBS** to select the PRBS function. Press **Done** to exit the **Source** menu.

PRBS7 On	Sine Off		 0

BitRate A		Source Typ	e Output

PRBS modulation

PRBS may be modulated or used as a modulation shape in the same way as sine or ramp, etc. See 'Modulation' for more information.

13. MODULATION

Modulation application

The instrument can apply nine types of modulation:

- Amplitude Modulation (AM)
- Amplitude Modulation Suppressed Carrier (AM-SC)
- Frequency Modulation (FM)
- Phase Modulation (PM)
- Amplitude Shift Keying (ASK)
- Frequency Shift Keying (FSK)
- Binary Phase Shift Keying (BPSK)
- Pulse Width Modulation (PWM)
- SUM (Carrier plus Modulating signal)

NOTE

Only one modulation type may be applied at any one time.

NOTE

Not all modulation types can be applied to a selected carrier waveform.

Modulation	Carrier waveform							Internal waveform change		
type	Sine	Square	Ramp	Pulse	Noise	Arb	PBRS*	Internal waveform shapes		
AM (AM-SC)	•	•	•	•	•	•	•	Sine, Square, Positive Ramp, Negative Ramp, Triangle,		
FM	•	•	•			•		Gaussian Noise, DC, Sinc, Exponential Rise/ Fall,		
РМ	•	•	•			•		Logarithmic Rise/ Fall, Haversine, Gaussian, Lorentz, D-Lorentz, Cardiac & User Defined Arbs		
ASK	•	•	•	•	•	•	•			
FSK	•	•	•			•		Square		
BPSK	•	•	•			•				
PWM				•				Sine, Square, Positive Ramp, Negative Ramp, Triangle, Gaussian Noise, DC, Sinc,		
SUM*	•	•	•	•	•	•	•	Exponential Rise/ Fall, Logarithmic Rise/ Fall, Haversine, Gaussian, Lorentz, D-Lorentz, Cardiac & User Defined Arbs		

*TGF4162 & TGF4242 only

Pressing the MOD key will allow access to control the modulation parameters. Pressing the On/Off soft-key will apply the currently selected modulation to the currently selected carrier waveform and the MOD key will become illuminated.

The screen below shows the effect of pressing the On/Off soft-key when Sine is the selected waveform, Internal is the selected (default) source and the selected modulation type is AM.

The Parameters Box on the right-hand side now shows **AM** in the **Modulation** field and the current modulation parameters of **AM Freq**, **Depth** and **Shape**. The Graph Box shows the modulating waveform below a representation of the modulated carrier waveform.

To change the carrier waveform parameters, press the WAVES key, followed by the waveform required. Notice that AM still shows in the Modulation field of the Parameters Box and the MOD key still glows, indicating that modulation is still active. To return to the modulation menu to edit the modulation parameters press the MOD key again. To turn off modulation press the On/Off soft-key in the modulation menu.

When modulation is enabled any sweep or burst applications will be disabled.

Amplitude modulation (AM)

To select amplitude modulation, press the MOD key to access the modulation menu and then press the **Type** soft-key to show the display below.

Sine On	Sine Off		
Frequency: Amplitude: Offset:	10.0000kHz 1.000 Vpp +0.000 Vdc	\square	
Load: Phase: Range: Output:	50 Ω +0.000 ° Attn Auto Normal		
CH1 Modula	tion Type Menu		
	Amplitude	Modulation	
AM	FM PM	ASK 🔺	Done

The soft-keys present all of the available modulation types.

If amplitude modulation is not already selected press the AM soft-key to access the amplitude modulation sub-menu.

Carrier waveform suppression

The instrument supports two types of amplitude modulation, 'normal' and double sideband suppressed carrier. In suppressed carrier amplitude modulation, the carrier is not present unless the modulating signal has an amplitude greater than zero.

Select from the two types of amplitude modulation and then press 🛥 soft-key.

Sine On	Sine Off		
Frequency: Amplitude: Offset:	10.0000kHz 1.000 Vpp +0.000 Vdc	\square	
Load: Phase: Range: Output:	50 Ω +0.000 ° Attn Auto Normal		
CH1 Modula	ition Type Menu		
	Amplitude	Modulation	
AM A	M_SC	t	Done

Press the $\ensuremath{\text{Done}}$ key to return to the top-level modulation menu.

Press On/Off soft-key to apply the selected modulation.

Modulation source

To select the modulation source, press the **Source** soft-key, the options are **Internal** or **External**.

Internal will use the waveform specified in the shape parameter and the Graph Box will show that shape as the modulating waveform.

Sine On	Sine Off		
Frequency: Amplitude: Offset:	10.0000kHz 1.000 Vpp +0.000 Vdc		
Modulation: AM Freq: Depth: Shape:	AM 1.00000kHz 50.00 % Sine		V
CH1 AM Mo	dulation Menu		
	Inte	ernal	
On/Off	Type Source	Depth Fre	q Shape

External will use the signal present at the MOD IN connector and the **Freq** and **Shape** parameters will no longer be editable. The Graph Box will always show a sinewave as the modulating waveform if the source is set to External.

Sine On	Sine Off		
Frequency: Amplitude: Offset: Modulation: Source: Depth:	10.0000kHz 1.000 Vpp +0.000 Vdc AM External 50.00 %		
CH1 AM Mo	dulation Menu F xt	ernal	
On/Off	Type Source		

Modulation depth

To set the modulation depth press the **Depth** soft-key. The Depth parameter will appear in the Edit Box and the modulating waveform in the Graph Box will show that depth is being edited.

Sine On	Sine Off		
Frequency: Amplitude: Offset:	10.0000kHz 1.000 Vpp +0.000 Vdc	$ \wedge \wedge \wedge $

The Parameters Box now shows the current sweep parameters of Sweep time, Start, Stop and Time, and Sweeping is shown in the Frequency field. The Graph Box shows the sweep waveform type below a representation of the swept carrier waveform. The Edit Box contains the selected parameter, in this case sweep time.

To change the carrier waveform parameters, press the WAVES key, followed by the waveform required.

Square On	Sine Off		 0
Frequency: High Level: Low Level: Duty: Sweep Type: Start: Stop: Time:	Sweeping +500.0mV -500.0mV 50.000 % Cont. Lin ★ 1.00000kHz 10.0000kHz 500.000us		
CH1 Wavefor	rm Select Menu		
	Square V	Naveform	
Sine Sq	uare Ramp	Pulse Noise	Arb

Notice that **Sweeping** still shows in the **Frequency** field of the Parameters Box and the SWEEP key still glows, indicating that sweep is still active.

Square On	Sine Off	FL REF.	
Frequency: Amplitude: Offset: Duty: Sweep Type: Start: Stop: Time:	Sweeping 1.000 Vpp +0.000 Vdc 50.000 % Cont. Lin + 1.00000kHz 10.0000kHz 500.000us		
CH1 Main Me	enu		
	+0.0(0 Vdc	Output

It is still possible to edit amplitude and dc offset in the PARAMS menu

To return to the Sweep menu to edit the sweep parameters press the SWEEP key again. To turn off sweep press the 0n/Off soft-key in the sweep menu.

Sweep type

To see the sweep settings in the parameters box, sweep must be activated. To activate sweep. press the On/Off soft key.

To set the sweep type press the **Type** soft-key. The currently selected type will appear in the Edit Box and soft-keys will change to a list of sweep types available.

Square On	Sine Off	FL INT REF.	 0
Frequency: Amplitude: Offset: Duty: Sweep Type: Start: Stop: Time:	Sweeping 1.000 Vpp +0.000 Vdc 50.000 % Cont. Log 1.00000kHz 10.0000kHz 500.000us		
CH1 Sweep	Type Menu Log [Down	
Lin 🛊 Li	n 🛊 Log 🛨	Log #	Done

The arrows indicate up or down sweeps. With any of the Lin types selected the sweep changes the frequency at a linear rate; with **log** types selected the sweep spends an equal time in each frequency decade. The up arrows indicate a sweep from start frequency to stop frequency. The down arrows indicate a sweep from stop frequency to start frequency.

Select the sweep type required by pressing the appropriate key then press the **Done** soft-key to return to the top-level sweep menu.

Start and stop frequency

Press **Freq** soft-key to access sweep frequency parameters. To set the start or stop frequency press the **Start** or **Stop** soft-keys.

Square On	Sine Off		
Frequency: Amplitude: Offset: Duty: Sweep Type: Start: Stop: Time:	1.000 Vpp +0.000 Vdc 50.000 %		чиничнани Паничнанич
CH1 Sweep I	Frequency Men	ú

Square On	Sine Off		 0
Frequency: Amplitude: Offset: Duty: Sweep Type: Start: Stop: Time:	1.000 Vpp +0.000 Vdc 50.000 %		
CH1 Sweep I	Frequency Men	u	
Start S	10.000 0	00 000kHz	Done

The frequency parameter will appear in the Edit Box and the sweep waveform type in the Graph Box will show that start or stop frequency is being edited.

NOTE

The start frequency must be lower than the stop frequency, if this is not the case an error will be generated

Centre and span

The instrument also allows the start and stop frequency parameters to be entered in terms of centre and span. Pressing either the **Start** or **Stop** soft-key while it is highlighted will switch the mode from start/stop to centre/span.

With centre/span mode selected the Edit Box shows the parameter, the Parameters Box shows **Centre** and **Span** in place of **Start** and **Stop** and the Graph Box changes to show the parameter which is being edited.

To return to start/stop mode press the highlighted Centre or Span soft-key.

Press the Done soft-key to return to the top-level sweep menu.

Sweep time

To set the sweep time press the **Time** soft-key. The time parameter will appear in the Edit Box and the Graph Box will show that sweep time is being edited.

Square On	Sine Off		 0
Frequency: Amplitude: Offset: Duty: Sweep Type: Centre: Span: Time:	Sweeping 1.000 Vpp +0.000 Vdc 50.000 % Cont. Log 5.50000kHz 9.00000kHz 500.000us

When the source is external trigger, the **Period** soft-key is replaced by **Slope** soft-key.

Repeated presses of the Slope soft-key key select between Positive Slope and Negative Slope.

Square On	Sine Off		
Frequency: Amplitude: Offset: Duty: Sweep Type: Centre: Span: Time:	Sweeping 1.000 Vpp +0.000 Vdc 50.000 % Trgd. Log + 5.50000kHz 9.00000kHz 500.000us		
CH1 Sweep	Trigger Menu		
	Positiv	e Slope	
Source S	ope 🧅		Done

The trigger waveform in the Graph Box changes to show the edge in use.

Square On	Sine Off		
Frequency: Amplitude: Offset: Duty: Sweep Type: Centre: Span: Time:	Sweeping 1.000 Vpp +0.000 Vdc 50.000 % Trgd. Log # 5.50000kHz 9.00000kHz 500.000us		
CH1 Sweep	Trigger Menu		
	Negativ	e Slope	
Source S	lope 🚽		Done

When the source is manual trigger, there are no additional parameters to be set. Press the TRIGGER key to send a manual trigger. Press the **Done** soft-key to return to the top-level sweep menu.

All the parameters for sweep are now set.

15. BURST

Overview

The burst function allows the carrier waveform to be triggered, produce a user specified number of cycles and then stop and wait for the next trigger.

For a PRBS waveform burst the count is the PRBS bit-rate and not the PRBS cycles. This allows the generation of incomplete or multiple sequences. A new trigger always restarts the PRBS from the start.

Alternatively, the number of cycles may be Infinite. In this case the trigger starts the waveform. As above, PRBS waveforms will be triggered from the start.

For a noise waveform, the noise generation will be reset to its start condition when triggered. This allows it to generate the same random noise sequence again without the need to wait for the repetition time to elapse.

The Gated Burst function causes the carrier waveform to run while the trigger is true and stop while the trigger is false. The gated function is also available with Noise as the carrier waveform.

In all the above cases, except Noise and PRBS, the operation will always produce an exact number of cycles of the carrier waveform.

The trigger signal for the burst can be internal from the trigger generator, external from the TRIG / COUNT (DC) IN connector or manual by pressing the TRIGGER key.

Burst application

To select burst, press the BURST key to access the burst menu and then press the On/Off softkey to apply the currently selected burst parameters to the currently selected carrier waveform. The BURST key will become illuminated.

The screen below shows the effect of enabling burst when sine is the selected waveform.

Sine On	Sine Off		
Frequency: Amplitude: Offset:	10.0000kHz 1.000 Vpp +0.000 Vdc	\bigcirc

All the parameters for burst are now set.

Channel selection

16. DUAL CHANNEL OPERATION

The instrument incorporates two separate generators in which all parameters can be set independently of each other.

NOTE

The two generators use the same system clock and share a single Trigger Input and Modulation Input on the rear panel.

Channel selection

Press the CH 1 or CH 2 key to select between channels for parameter editing.

The selected channel is indicated by a specified colour for easy identification.

Channel 1 is or	ange:		
Sine On	Sine On		
Frequency: Amplitude: Offset:	10.0000kHz 1.000 Vpp +0.000 Vdc	\bigwedge	
Load: Phase: Range: Output:	50 Ω +0.000 ° Attn Auto Normal		
CH1 Main M	enu		
		00 000kHz	Quitaut
Freq 🚽	Ampl Offset		Output

Channel 2 is green:

Sine On	Sine On		
Frequency: Amplitude: Offset:	10.0000kHz 1.000 Vpp +0.000 Vdc	\bigwedge	*****
Load: Phase: Range: Output:	50 Ω +0.000 ° Attn Auto Normal		••••••••••••••••••••••••••••••••••••••
CH2 Main M	enu	a constant and	
	10.000 00)0 000kHz	
Freq 🖕	Ampl Offset		Output

Any channel specific set parameters will always be shown in the specified colour for that channel.

System settings will be neutral in white, editing is also shown in white.

Linked channels

Linked channels

The two channels can be linked in a variety of ways. All of the options are available from the Dual Channel menu which is accessed by pressing the UTILITY key.

Sine On	Sine On		 0
Frequency: Amplitude: Offset:	10.0000kHz 1.000 Vpp +0.000 Vdc	$\left \right\rangle$	
Load: Phase: Range: Output:	50 Ω +0.000 ° Attn Auto Normal		
Utility Menu

18 - Harmonic Waveforms

Selecting arb location to store harmonic waveforms

18. HARMONIC WAVEFORMS

(TGF4162 & TGF4242 only)

The instrument is capable of creating waveforms by the addition of sine wave harmonics, up to 16 harmonics can be used, chosen from up to the 50th order.

The amplitude and phase can be individually set for each harmonic.

Harmonic waveforms can also be created or edited in the Waveform Manager Plus V4.13 Windows application supplied on the Website: <u>www.aimtti.com</u>

NOTE	
	The created harmonic waveform is store
	locations. Any previous waveform stored

The created harmonic waveform is stored in one of the four user-defined arbitrary waveform locations. Any previous waveform stored in the same location is erased.

To output the harmonic waveform, select ARB as the carrier waveform and then select the user-defined arbitrary waveform where the harmonic is stored as the output either from the **Arbs** menu under **Load**.

Selecting arb location to store harmonic waveforms

With arb as the selected waveform, pressing the Arbs soft-key switches to the Arb Arbs menu.

Load: Phase: Range: Output:	50 Ω +0.000 ° Attn Auto Normal		
Utility Menu			
System	Instr I/O	Calib Dual	Ch Help

Each of the soft-key selected menus is discussed in the following sections.

System

Pressing the System soft-key gives control of some system level functions.

Sine On	Sine On		
Frequency: Amplitude: Offset:	10.0000kHz 1.000 Vpp +0.000 Vdc	\square	
Load: Phase: Range: Output:	50 Ω +0.000 ° Attn Auto Normal		
Utility Syster	n Menu		
	Power-C	On Default	
Pwr0n-	Beep Display	Format Defa	ult Done

Power on state

Pressing the PwrOn soft-key will alternate between Power-On Default and Power-On Latest.

With **Power-On Default** selected the instrument will power up with the factory default parameters loaded.

With **Power-On Latest** selected the instrument will power up with the parameters as they were at the last power down.

Beep state

Pressing the Beep soft-key will show the beep menu, the options are Beep and Tick, pressing either of the soft keys will alternate between On and Off for that particular type.

Beep refers to the sound associated with error and warning messages, when activated the screen will read Message Beep On and pop-up messages will be accompanied by a sound. These sounds are suppressed with Message Beep Off.

Sine On	Sine On		 0
Frequency: Amplitude: Offset:	10.0000kHz 1.000 Vpp +0.000 Vdc	\square	
Load: Phase: Range: Output:	50 Ω +0.000 ° Attn Auto Normal		
Beep 🖵	Message	Beep On	

Tick refers to the sound made when the front panel keys are pressed, when activated the screen will read Key Tick On and each key press will make a short sound. These sounds are suppressed with Key Tick Off.

Sine On	Sine On	FL REF.	
Frequency: Amplitude: Offset:	10.0000kHz 1.000 Vpp +0.000 Vdc	\square

Веер	Key T	ick On	1.1

Press the 🗲 soft key to return to the Utility System Menu.

Display control

Pressing the **Display** soft-key will show the **Set Display Menu**.

Pressing the **Bright** soft-key allows the display backlight brightness to be adjusted.

Sine On	Sine On		
Frequency: Amplitude: Offset:	10.0000kHz 1.000 Vpp +0.000 Vdc	\square	
Load: Phase: Range: Output:	50 Ω +0.000 ° Attn Auto Normal		
Set Display	Menu		
	50) %	
Bright	Layout1 Layout2	Layout3	L

The three layout soft keys change the display as follows:

Sine On	Sine On	FL WF.	
Frequency: Amplitude: Offset:	10.0000kHz 1.000 Vpp +0.000 Vdc	\bigcirc	
Load: Phase: Range: Output:	50 Ω +0.000° Attn Auto Normal		
Set Display I	Menu		
F	Params - Gr	aph (Defau	ilt)
	ayout1 Layout2		1

- Layout 1 (Default) Shows both the parameters and the graph for the selected channel.
- Layout 2 Shows the parameters for both channels simultaneously.
- Layout 3 Shows the graphs for both channels simultaneously.

For more information see 'Display options'

Press the 🛋 to return to the Utility System Menu.

Number format

Pressing the Format soft-key will show the Format menu.

This menu allows the number format used in the Edit Box to be customised. The default is comma format which is selected by pressing the **Comma** soft-key.

In comma format, digits after the decimal point are arranged in groups of three with the groups separated by a comma.

Sine On	Sine On		
Frequency: Amplitude: Offset:	10.0000kHz 1.000 Vpp +0.000 Vdc	\bigwedge	********
Load: Phase: Range: Output:	50 Ω +0.000 ° Attn Auto Normal		
Set Numeric	Format Menu	and some	
	XXX.X	XX,XXX	
Comma S	Space No		t

Pressing the Space soft-key will change to space format.

In 'space' format, digits after the decimal point are arranged in groups of three with the groups separated by a space.

Sine On	Sine On		 0
Frequency: Amplitude: Offset:	10.0000kHz 1.000 Vpp +0.000 Vdc	\bigwedge	
Load: Phase: Range: Output:	50 Ω +0.000 ° Attn Auto Normal		
Set Numeric	Format Menu	and the second	
	XXX.XX	XXXX	
Comma	Space No		t

Sine On	Sine On		 0
Frequency: Amplitude: Offset:	10.0000kHz 1.000 Vpp +0.000 Vdc	\bigwedge	
Load: Phase: Range: Output:	50 Ω +0.000 ° Attn Auto Normal		
Set Numeric	Format Menu		
	XXX.X	XXXXX	
Comma S	Space No		t

Pressing the No soft-key will change to no format.

In 'no' format, digits after the decimal point are not grouped.

Press the 🔺 soft-key to return to the top-level system menu.

Restore factory defaults

Pressing the **Default** soft-key allows all instrument parameters (except remote interface configuration parameters) to be restored to their factory settings as detailed in 'Appendix 1.

Sine On	Sine On		 0
Frequency: Amplitude: Offset:	10.0000kHz 1.000 Vpp +0.000 Vdc	\square	
Load: Phase: Range: Output:	50 Ω +0.000 ° Attn Auto Normal		
F	Restore Fac	tory Defaul	the second second

Press the ${\bf Yes}$ soft key to restore factory default settings or ${\bf No}$ soft key to return to the top-level system menu.

Instrument settings

Pressing the Instr soft-key opens the Utility Instrument sub-menu.

Sine On	Sine On		
Frequency: Amplitude: Offset:	10.0000kHz 1.000 Vpp +0.000 Vdc	\bigcirc	
Load: Phase: Range: Output:	50 Ω +0.000 ° Attn Auto Normal		
Utility Instru	ment Menu	1	
	Interna	I Clock	
ClkSrc-	Sync Config	ManTr FrCi	ntr Done

Reference clock source

Alternate presses of the **ClkSrc** soft-key change between using the Internal Clock and the External Clock. An external clock must have a frequency of 10MHz (+/-50kHz) and is applied to the rear panel socket 10MHz REF IN.

- If the internal clock is being used, \blacksquare is displayed alongside INT REF.
- If an external clock is being applied or is being used,

appears alongside EXT REF.

INT REF is displayed alongside

- If a valid clock signal is detected (but not used), EXT DET.
- If the clock source is set to external and a valid external clock signal is not detected, the internal clock will be used by default and displayed followed by EXT ERR.

Ł

Instrument settings

Sync type control

Pressing the Sync soft-key will show the sync type control menu.

Sine On	Sine On		 0
Frequency: Amplitude: Offset:	10.0000kHz 1.000 Vpp +0.000 Vdc	\bigwedge	
Load: Phase: Range: Output:	50 Ω +0.000 ° Attn Auto Normal		
Set Sync T	ype Menu		
	Sync Ou	it: Normal	
Normal	Carrier Trigger	Off	t

The currently selected type will appear in the Edit Box and the soft-keys will change to a list of Sync types available.

The available Sync types are explained below:

Normal - Automatically sets the most relevant Sync output for the instrument set-up.
 Carrier - A square wave at the same frequency and duty as the carrier waveform. Available for all waveforms except noise.
 Trigger - A buffered version of the Trigger signal.
 Off - Sync is turned off.

NOTE

Sync type is only relevant when channel 2 is configured to output channel 1 sync.

Press the 🔺 soft-key to return to the top-level instrument menu.

Channel 2 configuration

Alternate presses of the **Config** soft-key changes the configuration of channel 2 between a separate independent output and channel 1 sync.

Manual trigger select

The TRIGGER key can be set to send a manual trigger signal to just the current channel (single) or to both channels simultaneously (dual).

Pressing the ManTr soft-key alternates between Manual Trigger Setup: Single and Manual Trigger Setup: Dual.

External counter

Press **FrCntr** soft-key to access the counter capabilities of the instrument. See 'External Counter' section for more information.

Once instrument parameters are set, press the Done soft-key to return to the utility menu.

I/0

Pressing the I/O soft-key shows the remote interface menu. This allows activation and control of the installed interfaces.

See 'Remote operation' for full details of the use of the interfaces.

Calibration

Pressing the Calib soft-key shows the opening screen for instrument calibration.

Full details on calibration may be found in 'Calibration'.

Dual channel operation

Pressing the Dual Ch soft-key gives access to the dual channel capabilities of the instrument.

See Dual Channel Operation in 'Specification' for full details of these capabilities.

Help

This gives access to the Help menu which is explained in the 'Help Operations'

20. STORES MENU

The stores menu gives access to both the instrument's local storage of arbitrary waveforms and parameter set-ups and to the external storage of a connected USB flash drive.

There are facilities for saving and recalling set-ups to and from local stores, deleting set-ups and arbitrary waveforms and copying waveforms and set-up files to and from a USB flash drive.

It is possible to save a waveform from a PC to a USB flash drive and then copy the waveform into the instrument for use.

Flash drive files and folders

The instrument uses the folder called TGF4XX2 for all file storage. This folder contains up to three more folders used as follows:

- \TGF4XX2\WAVES. This folder is used to store arbitrary waveforms. It is the only place where the instrument will look for waveform files. A waveform file has a file extension of .WFM. Files with any other extension will be ignored.
- \TGF4XX2\SETUPS. This folder is used to store set-ups. It is the only place where the instrument will look for set-up files. A set-up file has a file extension of .SU. Files with any other extension will be ignored.
- \TGF4XX2\FIRMWARE. This folder, if present, is used to store instrument firmware updates. This is the only place where the instrument will look for firmware update files. There are several types of file that may be in this folder. They should not be tampered with as they are checked by the firmware during use and, if corrupt, could render the instrument non-functional. After a successful update it is safe to delete the files in this folder. This option is offered by the bootloader code in the instrument.

The instrument is able to read and write flash drives formatted FAT16 or FAT32. The instrument does not generate or use long filenames. A filename can only be up to eight characters in length.

When a new flash drive is attached to the instrument the required folders will be created automatically.

Using the stores menu

Pressing the STORES key will show the stores menu.

Sine Off	Sine Off		
Frequency: Amplitude: Offset:	5.00000MHz 1.000 Vpp +0.000 Vdc	\square	
Load: Phase: Range: Output:	50 Ω +0.000° Attn Auto Normal		
Stores Menu			
Setup	Arbs		

Pressing the **Setup** soft-key displays the setup sub-menu.

The complete settings of the instrument can be saved to internal memory. Up to nine instrument set-ups can be stored internally as files under default or user-defined names. Set-up files can be copied to and from a USB Flash drive.

Sine Off	Sine Off		.
➡ Local: Setup	DS	Disk: Setups	
 → SETUP1 2 SETUP2 3 SETUP3 4 SETUP4 5 SETUP5 	3703 Empty Empty Empty Empty	SETUP1	3703
6 SETUP6 7 SETUP7 8 SETUP8	Empty Empty Empty		
Source Co	py Save	Recall Delet	te Done

There are now two screen boxes between the Status Line and the Soft-key Labels:

The Local: Box on the left contains a list of appropriate local files.

The **Disk:** Box on the right contains a list of the appropriate files on an attached USB flash drive.

If no flash drive is attached the list will read **Please insert the disk.** It is not necessary to attach a flash drive for local only operations.

The top line of each box indicates which file type that the list contains and one box has \clubsuit (the selection arrow) pointing at the top line. The lists both show \clubsuit pointing at their selected file. One box is selected and one file from each list is selected. Moving the three selection arrows around defines the file or files that will be operated on by soft-key presses and the direction that data will flow between the files.

The files are listed by name and the number indicates the size of the file in bytes for a set-up file or the number of points in a waveform file.

There are nine local set-up stores and four local arbitrary waveform stores. The respective lists always show all of the stores even if they are empty. An empty store shows **Empty** instead of a size.

Selections

The **Source** soft-key selects between local and disk. When local is selected, the selection arrow is in the **Local:** Box. When disk is selected, the selection arrow is in the **Disk:** Box.

NOTE

When no files are stored on the attached flash drive, the disk box will read 'Setups not found'

The file selection arrows are moved by first selecting the required box, as above. A file is then selected by turning the KNOB until the selection arrow is next to the required filename. If there are more files than will fit on the screen the list will scroll when the arrow reaches the top or bottom of the box.

Operations on set-up files

There are nine local set-up stores numbered 1 to 9. The number is shown next to the filename in the Local: Box. Initially the files will all be empty. The file names are SETUP1 to SETUP9 by default but they may be changed as they are used.

There are four operations available for set-up files as shown by the soft-key labels **Copy**, **Save**, **Recall** and **Delete**.

The copy operation will not be available if no flash drive is attached.

Сору

The copy operation allows set-up files to be copied between local storage and an attached USB flash drive.

To copy a file from local to disk:

- 1. Select the Local: Box by pressing the Source soft-key.
- 2. Select the file to be copied using the KNOB.
- 3. Press the Copy soft-key.
- 4. Optionally modify the name of the file to receive the copy. This will default to the name of the file selected in step 2 above if it is not modified.

The screen below shows an example after performing the above actions. Here the file in store 3 will be saved to a set-up file on disk. The name will be SETUP3 unless it is changed.

Copy from: shows that the source is Local.

Copy to: shows that the destination is Disk.

Local shows the file that will be written to Disk.

Disk and the Edit Box show the name of the file that will be written, the file name can be edited using the KNOB and cursor keys.

NOTE

A name with a length of up to 8 characters can be used.

The cursor keys < > are used to select the character and the KNOB is used to change the character. When the knob is turned clockwise the characters change in the following order:

0 to 9, @, A to Z, (space) ! # \$ % & ' () -

Characters can be deleted or spaces created using the Space soft-key.

The \checkmark key cancels the copy operation and returns to the set-up sub-menu.

The **Execute** soft-key starts the copy operation and returns to the set-up sub-menu when complete.

Operations on set-up files

Save

The save operation allows the current instrument set-up to be saved to a local set-up store.

NOTE	
	Save will function with or without an attached USB flash drive.

To perform a save operation first select the set-up store for the current instrument state to be saved to using the KNOB. Pressing the **Save** soft-key will show a screen similar to that below.

Sine Off	Sine Off		
Save : Curr Save to : Lo			
Setup:S Size:370			
Save Setup	Menu		
Edit N	Name:	SETUP1	
		Space 🤰	Execute

The name offered will be the same as the name in the selected set-up store when the **Save** soft-key was pressed. The Edit Box shows the name of the file that will be saved and the soft-key labels. The KNOB and cursor keys allow the name to be edited.

A name of up to 8 characters can be used.

The cursor keys < > are used to select the character and the KNOB is used to change the character. When the KNOB is turned clockwise the characters change in the following order: 0 to 9, @, A to Z, (space) ! # \$ % & ' () -

NOTE

Characters can be deleted or spaces created using the Space soft-key.

The \checkmark key cancels the save operation and returns to the set-up sub-menu.

The **Execute** soft-key starts the save operation and returns to the set-up sub-menu when complete.

Recall

The recall operation allows the current instrument set-up to be replaced with the set-up from a local store.

To perform a recall operation first select the set-up store containing the instrument state to recall using the KNOB.

Pressing the Recall soft-key will then recall the data and load it as the current instrument setup.

Delete

The delete operation allows the set-up in the selected store to be deleted.

The store will then be marked empty and return to the original 'Setup' number.

Press the Done soft-key to return to the top-level stores menu.

Operations on waveform files

Pressing the Arbs soft-key displays the waveform sub-menu.

Sine Off	Sine Off		
→ Local: Wa	aveforms	Disk: Wavefo	rms

There are four local arbitrary waveform stores numbered 1 to 4. The number is shown next to the file name in the Local: Box. Initially the files are all set to the default four-point square-wave. The file names are set as ARB1 to ARB4 by default but they may be changed as they are used.

Each arbitrary waveform store can hold a waveform with a maximum of 8192 points.

There are two operations available for waveform files as shown by the soft-key labels **Copy** and **Delete**.

NOTE

The copy operation will not be available if no USB flash drive is attached.

Сору

The copy operation allows waveform files to be copied between local storage and an attached USB flash drive.

To copy a file from local to disk:

- 1. Select the Local: Box by pressing the Source soft-key.
- 2. Select the file to be copied using the KNOB.
- 3. Press the Copy soft-key.
- 4. Optionally modify the name of the file to receive the copy. This will default to the name of the file selected in step 2 above if it is not modified.

The screen below shows an example after performing the above actions. Here the file in store 3 will be saved to a waveform file on disk. The name will be ARB3 unless it is changed.

Copy from: shows that the source is Local.

Copy to: shows that the destination is Disk.

Local shows the file that will be written to Disk.

Disk and the Edit Box show the name of the file that will be written, the file name can be edited using the KNOB and cursor keys.

A name with a length of up to 8 characters can be used.

The cursor keys < > are used to select the character and the KNOB is used to change the character. When the KNOB is turned clockwise the characters change in the following order:

0 to 9, @, A to Z, (space) ! # \$ % & ' () -

Characters can be deleted or spaces created using the Space soft-key.

The \checkmark key cancels the copy operation and returns to the arbs sub-menu.

The **Execute** soft-key starts the copy operation and returns to the arbs sub-menu when complete.

Copy to: shows that the destination is Local.

Disk shows the file that will be written to Local.

Local and the Edit Box show the name of the file that will be written, the file name can be edited using the KNOB and cursor keys.

NOTE

A name with a length of up to 8 characters can be used.

The cursor keys < > are used to select the character and the KNOB is used to change the character. When the KNOB is turned clockwise the characters change in the following order:

0 to 9, @, A to Z, (space) ! # \$ % & ' () -

Characters can be deleted or spaces created using the Space soft-key.

The \checkmark key cancels the copy operation and returns to the set-up sub-menu.

The **Execute** soft-key starts the copy operation and returns to the set-up sub-menu when complete.

Delete

The delete operation allows the waveform in the selected store to be deleted. The store will contain the default four-point square-wave after waveform deletion. Press the **Done** soft-key to return to the top-level stores menu.

21. HELP OPERATIONS

The instrument has a comprehensive help system which allows easy access to any Help page.

It is possible to get help in two ways:

- Help menu. Press the UTILITY and then press Help soft-key to access a list of help topics which give general information about instrument operations.
- Context sensitive help. Press and hold down any key, including soft-keys, for two seconds to access the Help page for that key.

There are two types of help screen.

- The Help menu. This is the screen that gives a list of general help topics.
- The Help topic screen. This is the screen that displays actual help texts.

Help menu

Pressing Utility key and then Help soft-key will display the Help menu.

The Help menu uses all the screen space between the Status Line and the Soft-key Labels and contains a list of help topics. To show a topic use the \Leftarrow and \clubsuit soft-keys to move the highlight back or forward through the list to select the required topic, then press the **Select** soft-key to show the topic screen.

Press the **Done** soft-key to exit from the Help menu.

Help topics

Selecting a Help topic from the Help menu or initiating context sensitive help will show a Help topic screen similar to that shown below.

Below the topic heading is the topic text. If there is more text than will fit on the screen press the \clubsuit soft-key to scroll the text up one line.

Continue scrolling until there is no more text indicated by the \clubsuit soft-key label disappearing. Once the text has been scrolled the \clubsuit soft-key may be used to scroll the text up one line. Pressing the \clubsuit soft key will return to the previous screen.

22 - Editing Arbitrary Waveforms

Selecting an arbitrary waveform for editing

22. EDITING ARBITRARY WAVEFORMS

The instrument contains some basic editing capabilities for arbitrary waveforms. The Waveform Manager Plus V4.13 Windows application may be used when more comprehensive capabilities for creation and editing are required, this can be downloaded from the website: www.aimtti.com

Waveforms created in Waveform Manager Plus may be downloaded to the instrument via a remote-control interface or they may be transferred using a USB flash drive.

Selecting an arbitrary waveform for editing

To use the instrument to edit an existing arbitrary waveform press the WAVES key followed by the **Arb** soft-key, then press the **Arbs** soft-key followed by the **Edit** soft-key.

The existing arbitrary waveforms appear on the first four soft-keys; the name is shown in the Edit Box and the selected arb is shown in the Graph Box if it is the currently selected arbitrary waveform.

Exp. Rise Of	Sine Off			
Frequency: Amplitude: Offset: Load: Phase: Range: Output:	20.0000kHz 1.000 Vpp +0.000 Vdc 50 Ω +0.000 ° Attn Auto Normal		/	
Arb Edit Sele	ct Menu		_	
Edit		ARB1		
User1 U	ser2 User3	User4	Edit	Done

Pressing the Edit Soft-key shows the edit menu.

Exp. Rise C	Off Sine Off		
Frequency: Amplitude: Offset:	20.0000kHz 1.000 Vpp +0.000 Vdc		
Load:	50 Ω		
Phase:	+0.000 °		
Range:	Attn Auto		
Output:	Normal		
Arb Edit Ma	ain Menu		
	Interpola	ator Off	
Interp 🚽	Resize Point	Line Na	me Done

While editing an arbitrary waveform, if the same arbitrary waveform is also currently selected to be the output, then the changes made to the arbitrary waveform can be observed in real time. The waveform will be available at the MAIN OUT connector of the selected channel for display on an oscilloscope. There will also be a representation shown in the Graph Box.

Editing an arbitrary waveform

Editing an arbitrary waveform

There are five editing options for arbitrary waveforms.

Interpolation

Interpolation is toggled on and off by the **Interp** soft-key. Although the instrument can handle arbitrary waveforms of any length, they are always played back using DDS. This requires that they must be forced to a suitable length. The instrument can play a waveform of 8192 (8k) points. If a waveform is less than or equal to 8k points it will be played back using 8k points. So, in order to play the waveform, it may be necessary to expand it.

This expansion may be performed in 2 possible ways. Either the extra points may be created by repeating the same points or linear interpolation may be used.

The **Interp** soft-key allows the type of expansion to be specified. With **Interpolator Off** selected points will be repeated, this is most appropriate for waveforms with fast rising or falling edges.

Exp. Rise Of	ff Sine Off		 0
Frequency: Amplitude:	20.0000kHz 1.000 Vpp		
Offset:	+0.000 Vdc		
Load:	50 Ω		
Phase: Range:	+0.000 * Attn Auto		
Output:	Normal		
Arb Edit Mai	n Menu		
	Interpola	ator Off	
Interp 🚽 F	Resize Point	Line Nan	ne Done

With Interpolator On selected linear interpolation will be used as points are added, this is most appropriate for waveforms which are more sinusoidal in nature.

Exp. Rise Of	Sine Off		
Frequency: Amplitude: Offset:	20.0000kHz 1.000 Vpp +0.000 Vdc		
Load:	50 Ω		
Phase:	+0.000 *		
Range:	Attn Auto		
Output:	Normal		Ē
Arb Edit Main	Menu		
	Interpol	ator On	
Interp - R	esize Point	Line Nar	ne Done

NOTE

For a truly complex waveform it should be created with 8k points so that expansion is not required.

Editing an arbitrary waveform

Resizing a waveform

A waveform may have its length changed by using the resize option. When a waveform is increased in size new points are added between existing points. The way that the values of these new points are calculated depends on the resize method setting. When a waveform is reduced in size points are simply dropped to achieve the new length.

Pressing the **Resize** soft-key will show the resize menu in the Edit Box and the soft-keys will show the resize options.

f Sine Off		
20.0000kHz 1.000 Vpp +0.000 Vdc 50 Ω +0.000 ° Attn Auto Normal		
Menu		
4		Execute
	20.0000kHz 1.000 Vpp +0.000 Vdc 50 Ω +0.000 ° Attn Auto Normal	20.0000kHz 1.000 Vpp +0.000 Vdc 50 Ω +0.000 * Attn Auto Normal Menu 4

The **No.Pts** soft-key allows the new size to be specified. Press the **Execute** soft-key to resize the waveform and return to the top-level edit menu. Pressing the **d** soft-key will return without resizing.

Duessing the Mathed soft he	y will allow the resize method to be set.
	\mathbf{v} will allow the resize method to be set
The file file file file file file file fil	

Exp. Rise (Off Sine Off		
Frequency: Amplitude: Offset: Load: Phase: Range: Output:	20.0000kHz 1.000 Vpp +0.000 Vdc 50 Ω +0.000 * Attn Auto Normal		
Arb Resize	Menu		
	Repeat	Points	
No.Pts	Method -		Execute

When a waveform is increased in size new points are added between existing points. The way that the values of these new points are calculated depends on the resize method setting, The **Repeat Points** method adds points of the same value as the original point in the waveform. The **Interpolate** method draws a straight line between the existing points.

When a waveform is reduced in size points are simply dropped to achieve the new length and the resize method setting has no effect. Press the **Execute** soft-key to set the waveform and return to the top-level edit menu

22 - Editing Arbitrary Waveforms

Editing an arbitrary waveform

Point editing

Pressing the **Point** soft-key shows the point edit menu in the Edit Box.

Exp. Rise Of	f Sine Off		
Frequency: Amplitude:	20.0000kHz 1.000 Vpp		/1
Offset:	+0.000 Vdc		
Load:	50 Ω		
Phase: Range:	+0.000 ° Attn Auto		
Output:	Normal		
Arb Point Ec	dit Menu		
	1	+0	
Point#	Value		1

The point edit menu allows individual points in the waveform to be set to any vertical level value. The **Point#** soft-key selects setting of the point number; pressing the **Value** soft-key then enables the value to be changed.

NOTE The point value is changed in the actual waveform immediately after it is edited.

Editing an arbitrary waveform

Line drawing

Pressing the Line soft-key shows the line edit menu in the Edit Box.

The Line edit menu allows a line to be drawn between any two points in the waveform. The end points of the line may be set to any vertical level value.

The **PointA** soft-key selects setting of the first point number; pressing the **ValueA** soft-key then enables the value to be changed.

Exp. Rise On	Sine Off	- FL #NF	
Frequency: Amplitude: Offset:	20.0000kHz 1.000 Vpp +0.000 Vdc		
Load: Phase: Range: Output:	50 Ω +0.000 ° Attn Auto Normal		
Arb Line Edit	t Menu		
	1	+6	
PointA V	alueA PointB	ValueB _	Execute
Exp. Rise On	Sine Off		 0
Frequency: Amplitude: Offset:	20.0000kHz 1.000 Vpp +0.000 Vdc		
Offset:	1.000 Vpp		
Amplitude: Offset:	1.000 Vpp +0.000 Vdc		
Amplitude: Offset: Load:	1.000 Vpp +0.000 Vdc 50 Ω		
Amplitude: Offset: Load: Phase: Range:	1.000 Vpp +0.000 Vdc 50 Ω +0.000 °		
Amplitude: Offset: Load: Phase: Range: Output:	1.000 Vpp +0.000 Vdc 50 Ω +0.000 ° Attn Auto Normal		
Amplitude: Offset: Load: Phase: Range:	1.000 Vpp +0.000 Vdc 50 Ω +0.000 ° Attn Auto Normal	+6	

The **PointB** and **ValueB** soft-keys are used to set the second point. The line is drawn in the actual waveform by pressing the **Execute** soft-key after which the instrument will return to the top-level edit menu.

Pressing the 🛋 soft-key will return without drawing the line.

22 - Editing Arbitrary Waveforms

Editing an arbitrary waveform

Naming a waveform

Pressing the Name soft-key shows the name edit menu in the Edit Box.

Exp. Rise On	Sine Off		
Frequency: Amplitude: Offset: Load: Phase: Range: Output:	20.0000kHz 1.000 Vpp +0.000 Vdc 50 Ω +0.000 ° Attn Auto Normal		
Arb Name Eo	iit Menu <mark>A</mark> RE	31 Space	∎ Execute

The soft-key labels, KNOB and cursor keys allow the name to be edited.

The Space soft-key enters a space character at the cursor position.

The 🔺 soft-key cancels the operation and returns to the top-level edit menu.

The Execute soft-key changes the name and returns to the top-level edit menu when complete

The cursor keys will move the edit cursor through the name and turning the KNOB will cycle through all valid characters, numbers and symbols.

Press the Done soft-key to exit the edit menu.

23. CALIBRATION

All parameters can be calibrated without opening the case, i.e. the generator offers 'closed–box' calibration. All adjustments are made digitally with calibration constants stored in flash memory. The calibration routine requires only a DVM, power meter and a frequency counter and takes no more than a few minutes.

Calibration should be carried out only after the generator has been operating for at least 30 minutes in normal ambient conditions.

Equipment required

- 3½ digit DVM with 0.25% DC accuracy and 0.5% AC accuracy at 1kHz.
- Universal counter capable of measuring 10.00000MHz with an accuracy of ± 0.1 ppm.
- Power meter with frequency range of 10kHz to 240MHz, capable of measuring up to a +5dBm signal with linearity better than 0.1dB

Calibration procedure

Pressing the UTILITY key followed by the **Calib** soft-key shows the opening screen for instrument calibration.

Exp. Rise On	Sine Off	FL REF.	
Calibration : Press 'Cont'n' to Press 'Done' to	start calibrati	on.	
Equipment neede To set values, ti left / right keys	frequency urn knob for	/ counter. fine adjustment	
Utility Calibration	Menu		
Cont'n Tests	s Pswrd	,	Done

Password control

The software asks for a 4-digit password in the range 0000 to 9999 to be used to access the calibration procedure. If the password is left at the factory default no messages are shown and calibration can proceed as described in the 'Calibration routine' section.

NOTE

Factory default password for calibration is 0000. only if a non-zero password has been set will the user be prompted to enter the password.

Setting the Password

On opening the Calibration screen press the **Pswrd** soft-key to show the password screen.

0.000 ° Itn Auto		
enu		
sword		
	0.000 vac 0.000 ° ttn Auto ormal enu sword	D Ω D000° Itn Auto ormal

Enter a 4-digit password from the keyboard; the Edit Box will show the message Confirm. Reenter the password and the message **new password stored** will pop up for two seconds before returning to the top-level calibration menu.

Using the password to access calibration or change the password

With the password set, pressing **Calib** on the utility screen will now show:

Exp. Rise Or	Sine Off	 0
Frequency: Amplitude: Offset:	20.0000kHz 1.000 Vpp +0.000 Vdc	
Load: Phase: Range: Output:	50Ω +0.000° Attn Auto Normal	
Set Passwor Enter I	^{d Menu} Password	

When the correct password has been entered from the keyboard the display changes to the opening screen of the calibration routine and calibration can proceed as described in the Calibration Routine section. If an incorrect password is entered the message Incorrect Password Please Try Again will pop up for two seconds before the display reverts to the Utility menu.

With the opening screen of the calibration routine displayed after correctly entering the password, the password can be changed by pressing the **Pswrd** soft-key and following the procedure described in 'Setting the Password'.

If the password is set to 0000 again, password protection is removed.

The password is held in flash memory and will not be lost when the memory battery backup is lost.

NOTE

In the event of the password being forgotten, contact the manufacturer for help in resetting the instrument.

Calibration routine

The calibration procedure proper is entered by pressing **Cont'n** on the top-level Calibration menu; pressing **Done** returns the display to the Utility menu. Pressing **Tests** calls a menu of basic hardware checks used at production test.

At each calibration step the display changes to prompt the user to adjust the KNOB or cursor keys, until the reading on the specified instrument is at the value given. The cursor keys provide coarse adjustment, and the KNOB fine adjustment. Pressing rightarrow increments the procedure to the next step; pressing rightarrow decrements back to the previous step. Alternatively, pressing **Cancel** returns the display to the final calibration screen at which the user can choose to either **Save, Recall** or **Restart**.

Each calibration step allows a calibration value to be calibrated. The screen messages specify the instrument to use for measurement, the connector to connect it to, the value to adjust for and the method of adjustment

Remote calibration

Calibration of the instrument may be performed over the LAN, USB or GPIB interface. To completely automate the process, the multimeter, power meter and universal counter will also need to be remote controlled and the controller will need to run a calibration program unique to this instrument.

The remote calibration commands allow a simplified version of manual calibration to be performed by issuing commands from the controller. The controller must send the CALADJ command repeatedly and read the DVM, power meter or frequency meter until the required result for the selected calibration step is achieved. The CALSTEP command is then issued to accept the new value and move to the next step.

While in remote calibration mode very little error checking is performed and it is the controller's responsibility to ensure that everything progresses in an orderly way. Only the following commands should be used during calibration.

CAUTION

Using any other commands while in calibration mode may give unpredictable results and could cause the instrument to lock up, requiring the power to be cycled to regain control.

CALIBRATION <cpd>, [nr1]:

The calibration control command. <cpd> can be one of three sub-commands:

- START Enter calibration mode; this command must be issued before any other calibration commands will be recognised.
- SAVE Finish calibration, save the new values and exit calibration mode.
- ABORT Finish calibration, do not save the new values and exit calibration mode.

[nr1] represents the 4-digit calibration password. The password is only required with CALIBRATION START and then only if a non-zero password has been set from the instrument's keyboard. The password will be ignored, and will give no errors, at all other times.

It is not possible to set or change the password using remote commands.

CALADJ <nr1></nr1>	Adjust the selected calibration value by <nr1>. The value must be in the</nr1>
	range –100 to +100. Once an adjustment has been completed and the new
	value is as required the CALSTEP command must be issued for the new
	value to be accepted.

CALSTEP Step to the next calibration point.

For general information on remote operation and command formats, refer to the following remote sections.

24. **REMOTE OPERATION**

Overview

The instrument can be remotely controlled via its USB, LAN or (optional) GPIB interfaces.

USB remote control operates in a similar way to an RS232 interface but via the USB connector.

Software supplied with the instrument sets up the controlling computer to treat the USB connection as a virtual COM port.

Application software on the computer can then access the instrument via that COM port.

The LAN interface is designed to meet 1.5 LXI Device Specification 2016.

Remote control using the LAN interface is possible using the TCP/IP Sockets protocol. The instrument also contains a basic Web server which provides information on the instrument and allows it to be configured from a web browser. Simple command line control from the browser is also possible.

The instrument is supplied with USB and LAN as standard; GPIB is an option. All interfaces are live at initial power up but access to individual interfaces may be restricted using the menus on the front panel or the configuration options on the web pages. To control the restriction of interfaces from the front panel select UTILITY, then the I/O soft-key to show the screen below.

Exp. Rise O	n Sine Off		
Frequency: Amplitude:	20.0000kHz 1.000 Vpp		
Offset:	+0.000 Vdc		
Load:	50 Ω		
Phase:	+0.000 *		
Range:	Attn Auto		
Output:	Normal		1
Utility I/O Me	enu	and the second s	
	Enabled -	TCP, USB	
REM IF.	Web Addr	LanRst	Done

The default is for all available interfaces to be enabled as shown. The **REM IF** soft-key may be used to select the interfaces required. Pressing the **REM IF** key will cycle round the possibilities, in this case:

- Enabled TCP, USB
- Enabled TCP Only
- Enabled USB Only

TCP is used instead of LAN because the LAN itself is not disabled and could still be used to access the instrument web server, Disabling TCP does, however, disable the web page command line control of the instrument.

Address selection

The web page access may also be disabled independently by pressing the Web soft-key. Alternate presses will produce

- Enabled WEBPAGE
- Disabled WEBPAGE

Exp. Rise O	n Sine Off		
Frequency: Amplitude:	20.0000kHz 1.000 Vpp		/
Offset:	+0.000 Vdc		
Load:	50 Ω		/ 1
Phase: Range:	+0.000 " Attn Auto		
Output:	Normal		
Utility I/O Me	enu	and the second second	
	Enabled -	WEBPAGE	
REM IF	Web 🚽 Addr	LanRst	Done

Address selection

The instrument address capability is strictly required only by the GPIB interface. However, use can be made of the ADDRESS? command over any of the interfaces to easily identify which instrument is being controlled by a particular COM port (for USB) or TCP socket (for LAN).

NOTE The LAN interface also has a separate 'Identify' function, accessible from the instrument's web pages, that flashes the instrument's display until the function is cancelled.

FL HEF Exp. Rise On Sine Off 20.0000kHz Frequency: Amplitude: Offset: 1.000 Vpp +0.000 Vdc .oad: 50 Ω +0.000 * hase: Attn Auto Range: Output: Normal Utility I/O Menu 5 Web Addr Done REM IF LanRst

The address is set from the instrument's front panel or web pages. To set the address from the front panel press the Addr soft-key on the Utility-I/O menu which will show the following.

Remote/ local operation

At power-on the instrument will be in the local state so the REM indicator is not displayed on the Status Line. In this state, all front panel operations are possible.

When the instrument receives a command from an interface the remote state will be entered and the REM indicator will be displayed on the Status Line. In this state the front panel is locked out and remote commands only will be processed.

The instrument may be returned to the local state by pressing the LOCAL key; however, the effect of this action will only remain until the instrument receives another character from the interface, when the remote state will once again be entered. Returning to Local by this action will keep the settings at their last remotely set values.

USB interface

Using the USB interface for remote control requires a Communications Device Class driver on the PC to provide a virtual COM port instance. In Windows a suitable driver is provided by Microsoft, but it is not installed by default. The data (.INF) file to control the installation is provided on the website: <u>www.aimtti.com</u>

NOTE

The same driver is also used by many other instruments from this manufacturer and may already be known to the PC.

Installing USB driver for the first time

To install the driver for the first time:

- First switch the unit on
- Then connect the USB port to the PC.

NOTE

In Windows 10, the driver is automatically installed by the operating system.

The Windows plug and play functions should automatically recognise the attachment of new hardware to the USB interface and (possibly after searching the internet for some time) prompt for the location of a suitable driver. Follow the Windows prompts and point to the CD, then the sub-directory for this product, and then to the USB Driver sub-directory below that. The file is named USB_ARM_VCP_xxx.INF, where xxx is a version number. A readme.pdf file will also be found in that directory if further assistance is needed.

In some cases, Windows will not complete this procedure (especially recent versions which search the internet first, looking for the unique Vendor ID and Product ID), in which case the instrument will show in Device Manager as "not working properly". If this happens, select this device, right click and choose "update driver software…" and then "browse this computer for driver software…" and then locate the .INF file on the CD as described above.

Once Windows has installed the device driver it will assign a COM port number to this particular unit. This number will depend on previous COM port assignments on this PC, and it may be necessary to use Device Manager to discover it. Each instrument has a unique USB identifier which is remembered by the system, so it will receive the same COM port number whenever it is attached to the same PC (regardless of the physical interface socket used), even though the COM port will disappear while the instrument is disconnected or switched off. Other instruments will receive different COM port numbers.

NOTE

A different PC will not necessarily assign the same COM port number to a particular instrument (it depends on the history of installations) Device Manager can be used to change the assignments given.

This virtual COM port can be driven by Windows applications (including a terminal emulator) in exactly the same way as any standard COM port, except that the Baud rate and other settings are unnecessary and are ignored. Some old applications might not function with COM port numbers 3 or 4, or above 9. In this case, use Device Manager to change the allocation given. Once it is installed, the driver will be maintained by Windows Update in the usual way.

LAN interface

The LAN interface is designed to comply with the LXI standard version 1.5 LXI Device Specification 2016 and contains the interfaces and protocols described below.

Since it is possible to misconfigure the LAN interface, making it impossible to communicate with the instrument over LAN, a LAN Configuration Initialise (LCI) mechanism is provided via the menus from the front panel to reset the instrument's interfaces to the factory default. The default setting is for the instrument to attempt to obtain settings via DHCP if available or, if DHCP times out (30 seconds), via Auto-IP.

In the very unlikely event that an Auto-IP address cannot be found a static IP address of 192.168.1.100 is assigned. Resetting the LAN removes any password protection which has been set on the web page.

To reset the LAN interface, press the LanRst soft-key on the Utility-I/O menu.

For more information on LXI standards refer to www.lxistandard.org

LAN connection

To use the LAN interface, the IP address of the unit must be known. A guide to the LXI Discovery Tool which provides links to the latest version of the tool and associated downloads, can be found on the website: <u>www.aimtti.com</u>. The tool is a Windows PC application which can be used to display the IP addresses or host names of all connected devices that comply with the VXI-11 protocol or support multicast Domain Name System (mDNS) records.

Connecting via a router is recommended as this is significantly quicker to assign an IP address; connecting directly to the PC will begin to assign an IP address only after a 30 second DHCP time-out. Double clicking on any entry in the list of devices discovered will open the PC's web browser and display the Home page of that device.

There are also tools for LAN discovery included as part of the National Instruments Measurement and Automation Explorer package and the Keysight (formerly Agilent) Vee application.

It is also possible to discover the assigned IP address from the Help menu:

- Press the UTILITY key
- followed by the Help soft-key
- then select option 3
- scroll down to the IP address.

The unit will, when first powered up, attempt to obtain settings via DHCP if available or, if DHCP times out (30 seconds), via Auto-IP. In the very unlikely event that an Auto-IP address cannot be found a static IP address of 192.168.1.100 is assigned. During this time the LAN indicator will keep flashing and change to if a LAN connection is successfully made. However, if a connection is still not made by the end of the above process, or if the LAN connector is physically removed at any time, the LAN field in the status line will change to is see 'LAN error' section for details.

Web server; configuration password protection

The unit contains a basic web server. This provides information on the instrument and allows it to be configured. The Configure page can be password protected to deter unauthorised changes to the remote operation configuration.

NOTE The default configuration page password is blank (no password).

The Configure page itself explains how to set the password. The password can be up to 15 characters long; the User Name should be left blank. The password will, however, be reset to the default (no password) if the front panel is used to reset all the LAN parameters to their factory default.

The web pages also have an 'Identify' function which allows the user to send an identifying command to the instrument which causes its display status line to flash until the command is cancelled.

ICMP ping server

The unit contains an ICMP server allowing the instrument to be 'pinged' via either its host name or IP address.

VXI-11 discovery protocol

The instrument has very limited support of VXI-11 which is sufficient for the discovery protocol and no more.

The instrument implements a Sun RPC Port-mapper on TCP port 111 and UDP port 111 as defined in RPC1183. The calls supported are: NULL, GET PORT and DUMP.

On TCP port 1024 a very simple VXI-11 protocol is implemented sufficient only for instrument discovery. This implements the following calls: CREATE LINK, DEVICE_WRITE, DEVICE_READ and DESTROY_LINK.

Once a link has been created anything written to the device is ignored and any read from the device returns the identification string as would be expected from a "*IDN?" command of the form

Manufacturer, Model, Serial No., XX.xx – YY.yy – ZZ.zz

where 'XX.xx' is the revision of the main firmware and 'YY.yy' is the revision of the remote interface firmware and 'ZZ.zz' is the revision of the USB flash drive firmware.

mDNS and DNS-SD support

Multicast DNS provides DNS services even on networks without a central DNS server (or DHCP server). This simplifies the setting up of a simple LAN using meaningful hostnames instead of a raw IP address. With service discovery it becomes straightforward for the device to be discovered and the services it provides.

The services provided by the instrument are http (_http._tcp) and lxi (_lxi._tcp).

VISA resource name

Because of the limited support for VXI-11(Discovery Protocol only), the instrument must be referred to by its raw socket information when used in software packages which communicate via a VISA resource name. For example, an instrument at IP address 192.168.1.100 would normally have a VISA resource name of "TCPIP0::192.168.1.100::inst0::INSTR" but for this instrument the name must be modified to read "TCPIP0::192.168.1.100::9221::SOCKET" where 9221 is the TCP port used by this instrument for control and monitoring.

XML identification document URL

As required by the LXI Standard, the instrument provides an XML identification document that can be queried via a GET at "http://<hostname>:80/lxi/identification" that conforms to the LXI XSD Schema (available at http://www.lxistandard.org/InstrumentIdentification/1.0) and the W3C XML Schema Standards (http://www.w3.org/XML/Schema). This document describes the instrument.

TCP sockets

The instrument uses 1 socket on TCP port 9221 for instrument control and monitoring. Text commands are sent to this port as defined in 'Remote Commands' and any replies are returned via the same port. Commands may be separated with either semicolons ";" or line feeds.

LAN error

If a LAN connection is made but an error is detected (e.g. the IP address is the same as another device on the network) then the LAN field in the status line will show leph until the error is corrected.

If a LAN error occurs; check and correct the configuration of the instrument; To reset the LAN interface press the LanRst soft-key on the UTILITY-I/O menu. The default setting is for the instrument to attempt to obtain settings via DHCP if available or, if DHCP times out (30 seconds), via Auto-IP. In the very unlikely event that an Auto-IP address cannot be found a static IP address of 192.168.1.100 is assigned. If no physical LAN connection is found at any time the LAN field in the status line will show

LAN status indication

The LAN field in the Status Line can show multiple status indications:

There is no LAN connection, for example no cable connected. When the system is attempting to connect the icon will flash.

Successfully connected with remote control enabled.

Connected but remote control is disabled.

Unsuccessful attempt to connect.

GPIB interface

The GPIB interface 24-way connector is located on the instrument rear panel. The pin connections are as specified in IEEE Std. 488.1-1987 and the instruments in the range complies with IEEE Std. 488.1-1987 and IEEE Std. 488.2-1987 and contain the following IEEE 488.1 subsets.

GPIB subsets

This instrument contains the following IEEE 488.1 subsets:

Source Handshake	SH1
Acceptor Handshake	AH1
Talker	Т6
Listener	L4
Service Request	SR1
Remote Local	RL2
Parallel Poll	PP1
Device Clear	DC1
Device Trigger	DT0
Controller	CO
Electrical Interface	E2

GPIB IEEE Std. 488.2 error handling – Query error register

The IEEE 488.2 UNTERMINATED error (addressed to talk with nothing to say) is handled as follows. If the instrument is addressed to talk and the response formatter is inactive and the input queue is empty then the UNTERMINATED error is generated. This will cause the Query Error bit to be set in the Standard Event Status Register, a value of 3 to be placed in the Query Error Register and the parser to be reset. See 'Status reporting' section for further information.

The IEEE 488.2 INTERRUPTED error is handled as follows. If the response formatter is waiting to send a response message and a <PROGRAM MESSAGE TERMINATOR> has been read by the parser or the input queue contains more than one END message then the instrument has been INTERRUPTED and an error is generated. This will cause the Query Error bit to be set in the Standard Event Status Register, a value of 1 to be placed in the Query Error Register and the response formatter to be reset thus clearing the output queue. The parser will then start parsing the next <PROGRAM MESSAGE UNIT> from the input queue. See 'Status reporting' section for further information.

The IEEE 488.2 DEADLOCK error is handled as follows. If the response formatter is waiting to send a response message and the input queue becomes full then the instrument enters the DEADLOCK state and an error is generated. This will cause the Query Error bit to be set in the Standard Event Status Register, a value of 2 to be placed in the Query Error Register and the response formatter to be reset thus clearing the output queue. The parser will then start parsing the next <PROGRAM MESSAGE UNIT> from the input queue. See 'Status reporting' section for further information.

GPIB parallel poll

Complete parallel poll capabilities are offered on this instrument. The Parallel Poll Enable Register is set to specify which bits in the Status Byte Register are to be used to form the ist local message The Parallel Poll Enable Register is set by the *PRE <nrf> command and read by the *PRE? command. The value in the Parallel Poll Enable Register is ANDed with the Status Byte Register; if the result is zero then the value of ist is 0 otherwise the value of ist is 1.

The instrument must also be configured so that the value of ist can be returned to the controller during a parallel poll operation. The instrument is configured by the controller sending a Parallel Poll Configure command (PPC) followed by a Parallel Poll Enable command (PPE). The bits in the PPE command are shown in the following table:

Bit 7 =	Х	don't care
Bit 6 =	1	
Bit 5 =	1	Parallel poll enable
Bit 4 =	0	
Bit 3 =	Sense	sense of the response bit; $0 = low, 1 = high$
Bit 2 =	?	
Bit 1 =	?	bit position of the response
Bit O =	?	

EXAMPLE

To return the RQS bit (bit 6 of the Status Byte Register) as a 1 when true and a 0 when false in bit position 1 in response to a parallel poll operation send the following commands

*PRE 64<pmt>, then PPC followed by 69H (PPE)

The parallel poll response from the instrument will then be 00H if RQS is 0 and 01H if RQS is 1.

During parallel poll response the DIO interface lines are resistively terminated (passive termination). This allows multiple devices to share the same response bit position in either wired-AND or wired-OR configuration, see 'GPIB interface' for more information.

Status reporting

A separate error and status model is maintained for each interface instance; an interface instance is defined as a potential connection. USB and GPIB are inherently single connections so represent one interface instance each. LAN, however, allows for multiple simultaneous connections and therefore represents multiple interface instances. One interface instance is allocated to the TCP socket interface and one more is allocated to the Web page interface. Having a separate model for each interface instance ensures that data does not get lost as many commands e.g. '*ESR?' clear the contents on read. Error status is maintained using a set of registers; these are described in the following paragraphs and shown on the Status Model at the end of this section.

Standard event status and standard event status enable registers

These two registers are implemented as required by the IEEE Std. 488.2. Any bits set in the Standard Event Status Register which correspond to bits set in the Standard Event Status Enable Register will cause the ESB bit to be set in the Status Byte Register.

The Standard Event Status Register is read and cleared by the *ESR? command. The Standard Event Status Enable register is set by the *ESE <nrf> command and read by the *ESE? command.

It is a bit field where each bit has the following significance.

- Bit 7: Power On. Set when power is first applied to the instrument.
- Bit 6: User Request (Not used).
- Bit 5: Command Error. Set when a syntax type error is detected in a command from the bus. The parser is reset and parsing continues at the next byte in the input stream
- Bit 4: Execution Error. Set when an error is encountered while attempting to execute a completely parsed command. The appropriate error number will be reported in the Execution Error Register, see 'Error messages' section
- Bit 3: Not used.
- Bit 2: Query Error. Set when a query occurs. The appropriate error number will be reported in the Query Error Register, see 'Error messages' section.
- Bit 1: Not used.
- Bit 0: Operation Complete: Set in response to the '*OPC' command.

Execution error register

This register contains a number representing the last error encountered over the current interface. The Execution Error Register is read and cleared using the 'EER?' command. On power up this register is set to 0 for all interface instances.

Status byte register and service request enable register

These two registers are implemented as required by the IEEE STD. 488.2. Any bits set in the Status Byte Register which correspond to bits set in the Service Request Enable Register will cause the RQS/MSS bit to be set in the Status Byte Register, thus generating a Service Request on the bus.

The Status Byte Register is read either by the *STB? command, which will return MSS in bit 6, or by a Serial Poll which will return RQS in bit 6. The Service Request Enable register is set by the *SRE <nrf> command and read by the *SRE? command.

24 - Remote operation

Status reporting

- Bit 6: RQS/MSS. This bit, as defined by IEEE Std. 488.2, contains both the Requesting Service message and the Master Status Summary message. RQS is returned in response to a Serial Poll and MSS is returned in response to the *STB? command.
- Bit 5:ESB. The Event Status Bit. This bit is set if any bits set in the Standard Event StatusRegister correspond to bits set in the Standard Event Status Enable Register.
- Bit 4: MAV. The Message Available Bit. This will be set when the instrument has a response message formatted and ready to send to the controller. The bit will be cleared after the Response Message Terminator has been sent.
- Bit 3: Not used.
- Bit 2: Not used.
- Bit 1: Not used
- Bit 0: Not used

Status model

Status reporting

Power-on and remote operation default settings

The following instrument status values are set at power on:

•	Status Byte Register	= 0
•	Service Request Enable Register +	= 0
•	Standard Event Status Register	= 128 (pon bit set)
•	Standard Event Status Enable Register †	= 0
•	Execution Error Register	= 0
•	Query Error Register	= 0
•	Parallel Poll Enable Register †	= 0

⁺ Registers marked thus are specific to the GPIB section of the instrument and are of limited use via other interfaces.

The instrument will be in local state with the front panel controls active.

The instrument parameters at power-on are always the same as at last switch off with the exception of the output status. By default, the output is always off at power on but the user may change this from the front panel to be the same at power on as it was at switch off, see the Power On State paragraph in the 'Utility Menu'- System section.

The *RST (reset) interface command resets the instrument to the Remote Operation Default settings.

25. **REMOTE COMMANDS**

USB/LAN remote command format

USB input to the instrument is buffered in a 256 byte input queue which is filled, under interrupt, in a manner transparent to all other instrument operations. The USB interface conforms with the USB 2.0 Full Speed.

LAN input to the instrument is buffered in a 1500 byte input queue which is filled, under interrupt, in a manner transparent to all other instrument operations. The LAN interface conforms with the 1.5 LXI Device Specification 2016.

Commands must be sent as specified in the commands list and must be terminated with the command terminator code OAH (Line Feed, LF). Commands may be sent in groups with individual commands separated from each other by the code 3BH (;). The group must be terminated with command terminator OAH (Line Feed, LF).

Responses from the instrument to the controller are sent as specified in the commands list. Each response is terminated by a <RESPONSE MESSAGE TERMINATOR> which is ODH (Carriage Return, CR) followed by OAH (Line Feed, LF).

<WHITE SPACE> is defined as character codes 00H to 20H inclusive.

<WHITE SPACE> is ignored except in command identifiers. e.g. '*C LS' is not equivalent to '*CLS'. The high bit of all characters is ignored. The commands are case insensitive.

GPIB remote command formats

GPIB remote command formats

GPIB input to the instrument is buffered in a 256 byte input queue which is filled, under interrupt, in a manner transparent to all other instrument operations. The queue contains raw (un-parsed) data which is taken, by the parser, as required. Commands (and queries) are executed in order and the parser will not start a new command until any previous command or query is complete. There is no output queue which means that the response formatter will wait, indefinitely if necessary, until the instrument is addressed to talk and the complete response message has been sent, before the parser is allowed to start the next command in the input queue.

Commands are sent as <PROGRAM MESSAGES> by the controller, each message consisting of zero or more <PROGRAM MESSAGE UNIT> elements separated by <PROGRAM MESSAGE UNIT SEPARATOR> elements.

A <PROGRAM MESSAGE UNIT> is any of the commands in the remote commands list.

A <PROGRAM MESSAGE UNIT SEPARATOR> is the semi-colon character ';' (3BH).

<PROGRAM MESSAGES> are separated by <PROGRAM MESSAGE TERMINATOR> elements which may be any of the following:

NL	The new line character (OAH)
NL^END	The new line character with the END message
^END	The END message with the last character of the message

Responses from the instrument to the controller are sent as <RESPONSE MESSAGES>. A <RESPONSE MESSAGE> consists of one <RESPONSE MESSAGE UNIT> followed by a <RESPONSE MESSAGE TERMINATOR>.

A <RESPONSE MESSAGE TERMINATOR> is the new line character with the END message NL^END.

Each query produces a specific <RESPONSE MESSAGE> which is listed along with the command in the remote commands list.

<WHITE SPACE> is ignored except in command identifiers. e.g. '*C LS' is not equivalent to '*CLS'.
<WHITE SPACE> is defined as character codes 00H to 20H inclusive with the exception of the NL
character (0AH). The high bit of all characters is ignored. The commands are case insensitive.

Command list

This section lists all commands and queries implemented in this instrument.

NOTE

there are no dependent parameters, coupled parameters, overlapping commands, expression program data elements or compound command program headers; each command is completely executed before the next command is started. All commands are sequential and the operation complete message is generated immediately after execution in all cases.

The following nomenclature is used:

•	<rmt></rmt>	<response message="" terminator=""></response>
•	<cpd></cpd>	<character data="" program="">, i.e. a short mnemonic or string such as ON or OFF. Multiple CPDs in a command are shown as <cpd1>, <cpd2>, <cpd3>, etc.</cpd3></cpd2></cpd1></character>
•	<nrf></nrf>	A number in any format. e.g. 12, 12.00, 1.2 e1 and 120 e-1 are all accepted as the number 12. Any number, when received, is converted to the required precision consistent with the use then rounded to obtain the value of the command.
•	<nr1></nr1>	A number with no fractional part, i.e. an integer.
•	<crd></crd>	<character data="" response=""></character>

• <BIN> Binary data as detailed for the particular command.

[..] Any item(s) enclosed in these brackets are optional parameters. If more than one item is enclosed then all or none of the items are required.

The commands which begin with a * are implemented as specified by IEEE Std 488.2 as Common commands. All will function when used on the other interfaces but some may be of little use.

The Operation Complete bit (bit 0) in the Standard Event Status Register is only ever set by the *OPC command. The *OPC (or the *OPC?) command can be used for device synchronisation due to the sequential nature of remote operations.

Channel selection

Most commands act on a particular channel of the generator. The following command is used to select the required channel. Subsequent commands will change only the specified parameter on the selected channel.

- CHN< NR1>
 Set channel <NR1> as the destination for subsequent commands. <NR1> can be 1 or 2.
- CHN? Return currently selected channel number

Continuous carrier wave commands

Continuous carrier wave commands

•	WAVE <cpd></cpd>	Set the output waveform type to <sine>, <square>, <ramp>, <triang> <pulse>, <noise>, <prbspn7>, <prbspn9>, <prbspn11>, <prbspn15>, <prbspn20>, <prbspn23>, <prbspn29>, <prbspn31> or <arb>.</arb></prbspn31></prbspn29></prbspn23></prbspn20></prbspn15></prbspn11></prbspn9></prbspn7></noise></pulse></triang></ramp></square></sine>
•	FREQ <nrf></nrf>	Set the waveform frequency to <nrf> Hz</nrf>
•	PER <nrf></nrf>	Set the waveform period to <nrf> Sec</nrf>
•	AMPLRNG <cpd></cpd>	Set the amplitude range to <auto> or <hold></hold></auto>
•	AMPL <nrf></nrf>	Set the amplitude to <nrf> Vpp</nrf>
•	HILVL <nrf></nrf>	Set the amplitude high-level to <nrf> Volts</nrf>
•	LOLVL <nrf></nrf>	Set the amplitude low-level to <nrf> Volts</nrf>
•	DCOFFS <nrf></nrf>	Set the dc offset to <nrf> Volts</nrf>
•	OUTPUT <cpd></cpd>	Set the output to <on>, <off>, <normal> or <invert></invert></normal></off></on>
•	ZLOAD <cpd></cpd>	Set the output load , which the generator is to assume for amplitude and dc offset entries, to <110,000> Ohms or <open>.</open>
•	SQRSYMM <nrf></nrf>	Set the square waveform symmetry to <nrf> %</nrf>
•	RMPSYMM <nrf></nrf>	Set the ramp waveform symmetry to <nrf> %</nrf>
•	SYNCOUT <cpd></cpd>	Set the sync output to <on>, <off></off></on>
•	SYNCTYPE <cpd></cpd>	Set the sync type to <auto>, <normal>, <carrier>, <trigger> or <off></off></trigger></carrier></normal></auto>
•	CHN2CONFIG <cpd></cpd>	Set channel 2 configuration to <mainout> or <syncout>.</syncout></mainout>
•	PHASE <nrf></nrf>	Set the waveform phase offset to <nrf> degree.</nrf>
•	ALIGN	Sends signal to align zero phase reference of both channels.

Pulse generator commands

•	PULSFREQ <nrf></nrf>	Set the pulse waveform frequency to <nrf> Hz</nrf>
•	PULSPER <nrf></nrf>	Set the pulse waveform period to <nrf> sec</nrf>
•	PULSWID <nrf></nrf>	Set the pulse waveform width to <nrf> sec</nrf>
•	PULSSYMM <nrf></nrf>	Set the pulse waveform symmetry to <nrf> %</nrf>
•	PULSEDGE <nrf></nrf>	Set the pulse waveform edges (positive and negative edge) to <nrf> sec</nrf>
•	PULSRISE <nrf></nrf>	Set the pulse waveform positive edge to <nrf> sec</nrf>
•	PULSFALL <nrf></nrf>	Set the pulse waveform negative edge to <nrf> sec</nrf>
•	PULSDLY <nrf></nrf>	Set the pulse waveform delay to <nrf> sec</nrf>

PRBS generator commands

•	PRBSBITRATE <nrf></nrf>	Set the PRBS waveform bit rate to <nrf> bits per</nrf>
		second.

Arbitrary waveform commands

Arbitrary waveform commands

•	ARBDCOFFS <nrf></nrf>	Set the arbitrary dc waveform offset to <nrf> Volts</nrf>
•	ARBFILTER <cpd></cpd>	Set the arbitrary waveform filter shape to <normal> or <step></step></normal>
•	ARBLOAD <cpd></cpd>	Set the output waveform type to <dc>, <sinc>, <haversine>, <cardiac>, <exprise>, <logrise>, <expfall>, <logfall>, <gaussian>, <lorentz>, <dlorentz>, <triang>, <arb1>, <arb2>, <arb3> or <arb4>. The user specified name of the arbs stored in ARB1, ARB2, ARB3 or ARB4 are also accepted as valid entries to change the waveform to ARB1, ARB2, ARB3 or ARB4 respectively.</arb4></arb3></arb2></arb1></triang></dlorentz></lorentz></gaussian></logfall></expfall></logrise></exprise></cardiac></haversine></sinc></dc>
•	ARBRESIZE <cpd>, <nr1></nr1></cpd>	Change the size of arbitrary waveform <cpd> to <nr1>.</nr1></cpd>
•	ARBDEF < CPD1>, < CPD2>, < CPD3>	Define an arbitrary waveform with user specified Waveform name and waveform point interpolation state. < CPD1> ARB1, ARB2, ARB3 or ARB4 < CPD2> "user specified waveform name" < CPD3> waveform point interpolation ON or OFF
	ARB1 <bin></bin>	Load data to an existing arbitrary waveform memory location ARB1. The data consists of two bytes per point with no characters between bytes or points. The point data is sent high byte first. The data block has a header which consists of the # character followed by several ascii coded numeric characters. The first of these defines the number of ascii characters to follow and these following characters define the length of the binary data in bytes. The instrument will wait for data indefinitely If less data is sent. If more data is sent the extra is processed by the command parser which results in a command error.
•	ARB2 <bin></bin>	See ARB1 description.
•	ARB3 <bin></bin>	See ARB1 description.
•	ARB4 <bin></bin>	See ARB1 description.
•	ARB1DEF?	Return user specified waveform name, waveform point interpolation state and waveform length of ARB1.
•	ARB2DEF?	See ARB1DEF? description.
•	ARB3DEF?	See ARB1DEF? description.
•	ARB4DEF?	See ARB1DEF? description.

25 - Remote Commands

Arbitrary waveform commands

•	ARB1?	Return the data from an existing arbitrary waveform location ARB1. The data consists of two bytes per point with no characters between bytes or points. The point data is sent high byte first. The data block has a header which consists of the # character followed by several ascii coded numeric characters. The first of these defines the number of ascii characters to follow and these following characters define the length of the binary data in bytes.
•	ARB2?	See ARB1? description.
•	ARB3?	See ARB1? description.
	ARB4?	See ARB1? description.

Modulation commands

•	MOD <cpd></cpd>	Set modulation to <off>, <am>, <amsc>, <fm>, <pm>, <ask>, <fsk>, <sum>, <bpsk> or <pwm></pwm></bpsk></sum></fsk></ask></pm></fm></amsc></am></off>
•	MODAMSHAPE <cpd></cpd>	Set AM waveform shape to <sine>, <square>, <rampup>, <rampdn>, <triang>, <noise>, <dc>, <sinc>, <exprise>, <logrise>, <expfall>, <logfall>, <haversine>, <cardiac>, <gaussian>, <lorentz>, <dlorentz>, <arb1>, <arb2>, <arb3>, <arb4>, <prbspn7>, <prbspn9>, <prbspn11>, <prbspn15>, <prbspn20>, <prbspn23>, < PRBSPN29> or < PRBSPN31></prbspn23></prbspn20></prbspn15></prbspn11></prbspn9></prbspn7></arb4></arb3></arb2></arb1></dlorentz></lorentz></gaussian></cardiac></haversine></logfall></expfall></logrise></exprise></sinc></dc></noise></triang></rampdn></rampup></square></sine>
	MODFMSHAPE <cpd></cpd>	Set FM waveform shape to <sine>, <square>, <rampup>, <rampdn>, <triang>, <noise>, <dc>, <sinc>, <exprise>, <logrise>, <expfall>, <logfall>, <haversine>, <cardiac>, <gaussian>, <lorentz>, <dlorentz>, <arb1>, <arb2>, <arb3>, <arb4>, <prbspn7>, <prbspn9>, <prbspn11>, <prbspn15>, <prbspn20>, <prbspn23>, < PRBSPN29> or < PRBSPN31></prbspn23></prbspn20></prbspn15></prbspn11></prbspn9></prbspn7></arb4></arb3></arb2></arb1></dlorentz></lorentz></gaussian></cardiac></haversine></logfall></expfall></logrise></exprise></sinc></dc></noise></triang></rampdn></rampup></square></sine>
•	MODPMSHAPE <cpd></cpd>	Set PM waveform shape to <sine>, <square>, <rampup>, <rampdn>, <triang>, <noise>, <dc>, <sinc>, <exprise>, <logrise>, <expfall>, <logfall>, <haversine>, <cardiac>, <gaussian>, <lorentz>, <dlorentz>, <arb1>, <arb2>, <arb3>, <arb4>, <prbspn7>, <prbspn9>, <prbspn11>, <prbspn15>, <prbspn20>, <prbspn23>, < PRBSPN29> or < PRBSPN31></prbspn23></prbspn20></prbspn15></prbspn11></prbspn9></prbspn7></arb4></arb3></arb2></arb1></dlorentz></lorentz></gaussian></cardiac></haversine></logfall></expfall></logrise></exprise></sinc></dc></noise></triang></rampdn></rampup></square></sine>
	MODPWMSHAPE <cpd></cpd>	Set PWM waveform shape to <sine>, <square>, <rampup>, <rampdn>, <triang>, <noise>, <dc>, <sinc>, <exprise>, <logrise>, <expfall>, <logfall>, <haversine>, <cardiac>, <gaussian>, <lorentz>, <dlorentz>, <arb1>, <arb2>, <arb3>, <arb4>, <prbspn7>, <prbspn9>, <prbspn11>, <prbspn15>, <prbspn20>, <prbspn23>, < PRBSPN29> or < PRBSPN31></prbspn23></prbspn20></prbspn15></prbspn11></prbspn9></prbspn7></arb4></arb3></arb2></arb1></dlorentz></lorentz></gaussian></cardiac></haversine></logfall></expfall></logrise></exprise></sinc></dc></noise></triang></rampdn></rampup></square></sine>
	MODSUMSHAPE <cpd></cpd>	Set SUM waveform shape to <sine>, <square>, <rampup>, <rampdn>, <triang>, <noise>, <dc>, <sinc>, <exprise>, <logrise>, <expfall>, <logfall>, <haversine>, <cardiac>, <gaussian>, <lorentz>, <dlorentz>, <arb1>, <arb2>, <arb3>, <arb4>, <prbspn7>, <prbspn9>, <prbspn11>, <prbspn15>, <prbspn20>, <prbspn23>, < PRBSPN29> or < PRBSPN31></prbspn23></prbspn20></prbspn15></prbspn11></prbspn9></prbspn7></arb4></arb3></arb2></arb1></dlorentz></lorentz></gaussian></cardiac></haversine></logfall></expfall></logrise></exprise></sinc></dc></noise></triang></rampdn></rampup></square></sine>
•	MODAMSRC <cpd></cpd>	Set AM waveform source to <int> or <ext></ext></int>
•	MODFMSRC <cpd></cpd>	Set FM waveform source to <int> or <ext></ext></int>
•	MODPMSRC <cpd></cpd>	Set PM waveform source to <int> or <ext></ext></int>

25 - Remote Commands

Modulation commands

- 1	MODPWMSRC <cpd></cpd>	Set PWM waveform source to <int> or <ext></ext></int>
• 1	MODSUMSRC <cpd></cpd>	Set SUM waveform source to <int> or <ext></ext></int>
• 1	MODAMFREQ <nrf></nrf>	Set AM waveform frequency to <nrf> Hz</nrf>
• 1	MODFMFREQ <nrf></nrf>	Set FM waveform frequency to <nrf> Hz</nrf>
• 1	MODPMFREQ <nrf></nrf>	Set PM waveform frequency to <nrf> Hz</nrf>
• 1	MODPWMFREQ <nrf></nrf>	Set PWM waveform frequency to <nrf> Hz</nrf>
• 1	MODSUMFREQ <nrf></nrf>	Set SUM waveform frequency to <nrf> Hz</nrf>
• 1	MODAMDEPTH <nrf></nrf>	Set AM waveform depth to <nrf> %</nrf>
• 1	MODFMDEV <nrf></nrf>	Set FM waveform deviation to <nrf> Hz</nrf>
• 1	MODPMDEV <nrf></nrf>	Set PM waveform deviation to <nrf> degree</nrf>
• 1	MODPWMDEV <nrf></nrf>	Set PWM waveform deviation to <nrf> %</nrf>
• 1	MODSUMLEVEL <nrf></nrf>	Set SUM waveform level to <nrf> %</nrf>
• 1	MODFSKSRC <cpd></cpd>	Set FSK waveform source to <int> or <ext></ext></int>
• 1	MODHOPFREQ <nrf></nrf>	Set HOP frequency to <nrf> Hz</nrf>
• 1	MODFSKRATE <nrf></nrf>	Set FSK rate to <nrf> Hz</nrf>
• 1	MODPOLFSK <cpd></cpd>	Set FSK slope to <pos> or <neg></neg></pos>
• 1	MODBPSKSRC <cpd></cpd>	Set BPSK waveform source to <int> or <ext></ext></int>
• 1	MODBPSKPHASE <nrf></nrf>	Set BPSK phase offset to <nrf> degree</nrf>
• 1	MODBPSKRATE <nrf></nrf>	Set BPSK rate to <nrf> Hz</nrf>
• 1	MODPOLBPSK <cpd></cpd>	Set BPSK slope to <pos> or <neg></neg></pos>
• 1	MODASKSRC <cpd></cpd>	Set ASK waveform source to <int> or <ext></ext></int>
• 1	MODHOPAMPL <nrf></nrf>	Set HOP amplitude to <nrf> Vpp</nrf>
• 1	MODASKRATE <nrf></nrf>	Set ASK rate to <nrf> Hz</nrf>
- 1	MODPOLASK <cpd></cpd>	Set ASK slope to <pos> or <neg></neg></pos>

•

•

•

•

.

Sweep commands

- SWPTYPE <CPD>
 Set the sweep type to <LINUP>, <LINDN>, <LOGUP> or <LOGDN>.
- SWPMODE <CPD> Set the sweep mode to <CONT> or <TRIG>.
- SWPTRGSRC <CPD>
 Set the sweep trigger source to <INT>, <EXT> or <MAN>.
- SWPTRGPER <NRF> Set the sweep trigger period to <NRF> Sec.
 - SWPTRGPOL <CPD> Set the sweep trigger slope to <POS> or <NEG>.
 - SWPBEGFREQ <NRF> Set the sweep start frequency to <NRF> Hz.
 - SWPENDFREQ <NRF> Set the sweep stop frequency to <NRF> Hz.
 - SWPCNTFREQ <NRF> Set the sweep centre frequency to <NRF> Hz.
 - Set the sweep frequency span to <NRF> Hz.
 - SWPTIME <NRF> Set the sweep time to <NRF> sec.
- SWP <CPD> Set the sweep to <ON> or <OFF>.

Burst commands

SWPSPNFREQ <NRF>

•	BSTTRGSRC <cpd></cpd>	Set the burst trigger source to <int>, <ext> or <man>.</man></ext></int>
•	BSTPER <nrf></nrf>	Set the burst trigger period to <nrf> Sec.</nrf>
•	BSTTRGPOL <cpd></cpd>	Set the burst trigger slope to <pos> or <neg>.</neg></pos>
•	BSTCOUNT <nr1></nr1>	Set the burst cou nt to <nr1> cycles.</nr1>
•	BSTPHASE <nrf></nrf>	Set the burst phase to <nrf> degree.</nrf>
•	BST <cpd></cpd>	Set the burst to <off>, <ncyc>, <gated> or <infinite>.</infinite></gated></ncyc></off>

External counter commands

•	CNTRSWT <cpd></cpd>	Set the external counter to <on> or <off></off></on>
•	CNTRCPLNG <cpd></cpd>	Set the counter source to <ac> or <dc> coupled input.</dc></ac>
•	CNTRTYPE <cpd></cpd>	Set the counter type to <frequency>, <period>, <width>, <nwidth> or <duty>.</duty></nwidth></width></period></frequency>
•	CNTRVAL?	Return the currently measured count value in <nrf> format. If the count type is frequency, then the returned value is in Hz, if the count type is duty cycle, then the returned value is in %, else the returned value is in seconds.</nrf>

Clock and miscellaneous commands

•	CLKSRC <cpd></cpd>	Set the clock source to <int> or <ext>.</ext></int>
•	CLKSRC?	Return the clock source <int> or <ext>.</ext></int>
•	CHNTRG <cpd></cpd>	Sends manual trigger to channel <one> or <two>. This command is the same as pressing the TRIGGER key. Its effect will depend on the context in which it is asserted. If the trigger source is manual and the generator is set to perform triggered burst or triggered sweep operation, this command sends a trigger pulse to the generator. If the trigger source is manual and the generator is set to perform gated burst operation, this command simply inverts the level of the manual trigger to high or low.</two></one>

Dual-channel function commands

•	AMPLCPLNG <cpd></cpd>	Set amplitude coupling to <on> or <off>.</off></on>
•	OUTPUTCPLNG <cpd></cpd>	Set output coupling to <on> or <off>.</off></on>
•	FRQCPLSWT <cpd></cpd>	Set waveform frequency coupling to <on> or <off></off></on>
•	TRACKING <cpd></cpd>	Set channel tracking to <off>, <equal> or <invert>.</invert></equal></off>

25 - Remote Commands

System and status commands

System and status commands

•	*CLS	Clear Status . Clears the Status structure. This indirectly clears the Status Byte Register.
	*ESE	Set the Standard Event Status Enable Register to the value of <nrf></nrf>
•	*ESE?	Return the value in the Standard Event Status Enable Register in <nr1> numeric format. The syntax of the response is <nr1><rmt></rmt></nr1></nr1>
•	*ESR?	Return the value in the Standard Event Status Register in <nr1> numeric format. THE REGISTER IS THEN CLEARED. The response is <nr1><rmt>. See 'Status reporting' section for details.</rmt></nr1></nr1>
•	*IST?	Return ist local message as defined by IEEE Std. 488.2. The syntax of the response is O <rmt>, if the local message is false, or 1<rmt>, if the local message is true.</rmt></rmt>
•	*OPC	Set the Operation Complete bit (bit 0) in the Standard Event Status Register. This will happen immediately the command is executed because of the sequential nature of all operations.
	*OPC?	Query Operation Complete status. The response is always 1 <rmt> and will be available immediately the command is executed because all commands are sequential.</rmt>
•	*PRE	Set the Parallel Poll Enable Register to the value <nrf>.</nrf>
•	*PRE?	Return the value in the Parallel Poll Enable Register in <nr1> numeric format. The syntax of the response is <nr1><rmt></rmt></nr1></nr1>
•	*SRE	Set the Service Request Enable Register to <nrf>.</nrf>
•	*SRE?	Return the value of the Service Request Enable Register in <nr1> numeric format. The syntax of the response is<nr1><rmt></rmt></nr1></nr1>
	*STB?	Return the value of the Status Byte Register in <nr1> numeric format. The syntax of the response is<nr1><rmt></rmt></nr1></nr1>
•	*WAI	Wait for Operation Complete true. As all commands

25 - Remote Commands System and status commands

		are completely executed before the next is started this command takes no additional action.
•	*TST?	The PSU has no self-test capability and the response is always 0 <rmt></rmt>
•	EER?	Query and CLEAR Execution Error Register . The response format is <nr1><rmt>.</rmt></nr1>
•	QER?	Query and CLEAR Query Error Register . The response format is <nr1><rmt></rmt></nr1>
	*LRN?	Return the complete setup of the instrument as a binary data block. To re-install the setup the block should be returned to the instrument exactly as it is received. The syntax of the response is LRN <bin>. The settings in the instrument are not affected by execution of the *LRN? Command.</bin>
•	LRN	Install data from a previous *LRN? command.
•	*RST	Reset the instrument parameters to their default values.
•	*RCL	Recall a previously stored instrument set-up file from the specified non-volatile memory location.
•	*SAV	Save the complete instrument set-up file to the specified non-volatile memory location.
	*TRG	This command is the same as pressing the TRIGGER key . Its effect will depend on the context in which it is asserted. If the trigger source is manual and the generator is set to perform triggered burst or triggered sweep operation, this command sends a trigger pulse to the generator. If the trigger source is manual and the generator is set to perform gated burst operation, this command simply inverts the level of the manual trigger to high or low.
	*IDN?	Return the instrument identification . The exact response is determined by the instrument configuration and is of the form of <manufacturer, model,="" no.,<br="" serial="">XX.xx – YY.yy' – ZZ.zz> where 'XX.xx' is the revision of the main firmware and 'YY.yy' is the revision of the remote interface firmware and 'ZZ.zz' is the revision of the USB flash drive firmware</manufacturer,>
	BEEPMODE	Set beep mode to <on>, <off>, <warn>, or <error></error></warn></off></on>
•	BEEP	Sound one beep.

Interface management commands

Interface management commands

•	LOCAL	Go to local. This does not release any active interface lock so that the lock remains with the selected interface when the next remote command is received.
•	ADDRESS?	Return the bus address of the instrument ; This is the address used by GPIB, if fitted, or may be used as a general identifier over the other interfaces.
•	IPADDR?	Return the present IP address of the LAN interface, provided it is connected. If it is not connected, the response will be the static IP if configured to always use that static IP, otherwise it will be 0.0.0.0 if waiting for DHCP or Auto-IP. The response is nnn.nnn.nnn <rmt>, where each nnn is 0 to 255.</rmt>
•	NETMASK?	Return the present netmask of the LAN interface , provided it is connected. The response is nnn.nnn.nnn.nnn <rmt>, where each nnn is 0 to 255.</rmt>
•	NETCONFIG?	Return the first means by which an IP address will be sought. The response is <crd><rmt> where <crd> is DHCP, AUTO or STATIC.</crd></rmt></crd>

The following commands specify the parameters to be used by the LAN interface.

NOTE:			
		ter these commands are sent before the new settings are used the queries listed above). The instrument does not attempt to ddress or netmask in any way other than checking that each anel LAN RESET switch will override these commands and ribed earlier.	
	•	NETCONFIG <cpd></cpd>	Specify the means by which an IP address will be sought. <cpd> must be one of DHCP, AUTO or STATIC.</cpd>
		IPADDR <quad></quad>	Set the potential static IP address of the LAN interface (as on the webpage). The parameter must be strictly a dotted quad for the IP address, with each address part an <nr1> in the range 0 to 255, (e.g. 192.168.1.101).</nr1>
	•	NETMASK <quad></quad>	Set the netmask to accompany the static IP address of the LAN interface. The parameter must be strictly a dotted quad for the netmask, with each part an <nr1> in the range 0 to 255, (e.g. 255.255.255.0).</nr1>

Calibration specific commands

See 'Calibration' section for details of calibration specific commands.

Error messages

Each error message has a number; only this number is reported via the remote-control interfaces. Error message numbers are placed in the Execution Error Register where they can be read via the remote interfaces.

26. APPENDIX 1.

Information, warning and error messages

In the following list where [VALUE] appears a numeric value will be inserted in the message which is appropriate to the parameter currently being edited. Message numbers that are omitted are reserved and not currently used. Some numbers can produce two different messages depending on the current instrument editing mode; these are indicated by 'or' in the list.

Error messages

- -1 Firmware Update / Battery Fail. Initialised to factory default state.
- -2 Frequency / Period invalid. Frequency lower limit 1mHz. Period upper limit 1000s.
- -3 Frequency / Period invalid. Frequency upper limit [VALUE] Period lower limit [VALUE].
- -4 Pulse width invalid. Limited by pulse period.
- -5 Pulse width invalid. Lower limit [VALUE].
- -6 Pulse edge time invalid. Limited by pulse width.
 - OR Pulse rise time invalid. Limited by pulse width.
- -7 Pulse edge time invalid. Lower limit [VALUE].OR Pulse rise time invalid. Lower limits [VALUE].
- -8 Invalid entry. Width cannot be less than (0.625 * Rise + 0.625 * Fall + [VALUE]).
- -9 Invalid entry. Period cannot be less than (Delay + Width + 0.625 * Rise + 0.625 * Fall + [VALUE]).
- -10 Pulse width deviation invalid for current pulse parameter settings.
- -11 Square width invalid. Lower limit [VALUE].
- -12 Bitrate invalid. Lower limit 1ubps.
- -13 Bitrate invalid. Upper limit [VALUE].
- -14 Frequency / Period invalid. Frequency lower limit 1uHz. Period upper limit 1 000000s.
- -15 Frequency / Period invalid for Sine. Frequency upper limit [VALUE]. Period lower limit [VALUE].

Or Frequency / Period invalid for Square. Frequency upper limit [VALUE]. Period lower limit [VALUE].

Or Frequency / Period invalid for Ramp. Frequency upper limit [VALUE]. Period lower limit [VALUE].

Or Frequency / Period invalid for Arb. Frequency upper limit [VALUE]. Period lower limit [VALUE].

- -16 Ramp symmetry invalid. Upper limit 100%.
- -17 Ramp symmetry invalid. Lower limit 0%.
- -18 Square duty cycle invalid. Upper limit 99.999%.

26 - Appendix 1. Error messages

-19	Square duty cycle invalid. Lower limit 0.001%.
-20	Frequency deviation invalid for current waveform / parameter settings.
-21	Hop frequency invalid for current waveform / parameter settings.
-22	Sweep frequency invalid for current waveform / parameter settings.
-23	Amplitude value invalid. Upper limit +32767.
-24	Amplitude value invalid. Lower limit-32767.
-25	Point number invalid. Last defined point [VALUE].
-26	Point number invalid. First defined point 1.
-27	Number of points invalid. Upper limit 8192.
-28	Number of points invalid. Lower limit 1.
-29	Please specify a filename in Short File Name (SFN) format.
-30	AM frequency invalid. Upper limit 10MHz.
-31	AM frequency invalid. Lower limit 1uHz.
-32	Amplitude depth invalid. Upper limit 100%.
-33	Amplitude depth invalid. Lower limit 0%.
-34	FM frequency invalid. Upper limit 10MHz.
-35	FM frequency invalid. Lower limit 1uHz.
-36	Frequency deviation invalid. Current upper limit [VALUE]
	OR Frequency deviation invalid. Cannot exceed carrier frequency.
	Frequency plus deviation limited to [VALUE].
-37	Frequency deviation invalid. Lower limit OHz.
-38	PM frequency invalid. Upper limit 10MHz.
-39	PM frequency invalid. Lower limit 1uHz.
-40	Phase deviation invalid. Upper limit +360 degrees.
-41	Phase deviation invalid. Lower limit-360 degrees.
-42	FSK rate invalid. Upper limit 10MHz.
-43	FSK rate invalid. Lower limit 2mHz.
-44	Hop frequency invalid. Current upper limit [VALUE].
-45	Hop frequency invalid. Lower limit 1uHz.
-46	BPSK rate invalid. Upper limit 10MHz.
-47	BPSK rate invalid. Lower limit 2mHz.
-48	Hop phase invalid. Upper limit +360 degrees.
-49	Hop phase invalid. Lower limit-360 degrees.
-50	SUM frequency invalid. Upper limit 10MHz.
-51	SUM frequency invalid. Lower limit 1uHz.
-52	SUM modulation level invalid. Upper limit 100%.

26 - Appendix 1.

Error messages

-53 SUM modulation level invalid. Lower limit 0%. -54 PWM frequency invalid. Upper limit 10MHz. -55 PWM frequency invalid. Lower limit 1uHz. -56 PWM deviation invalid. Maximum deviation limited by carrier width setting. -57 PWM deviation invalid. Lower limit Ons. -58 Arb DC cannot be selected when modulation is enabled and vice versa. -59 FM invalid for Noise / PRBS. -60 PM invalid for Noise / PRBS. -61 FSK invalid for Noise / PRBS. -62 BPSK invalid for Noise / PRBS. -63 PWM invalid for Noise / PRBS. -64 PWM is only valid for Pulse. Start frequency invalid. Lower limit 1uHz. -65 Start frequency invalid. Cannot be greater than stop frequency. -66 -67 Stop frequency invalid. Cannot be less than start frequency. -68 Stop frequency invalid. Current upper limit [VALUE]. -69 Sweep time invalid. Lower limit 1us. -70 Sweep time invalid. Upper limit 500s. -71 Trigger period invalid. Lower limit [VALUE]. -72 Trigger period invalid. Upper limit 500s. -73 Arb DC cannot be selected when frequency sweep is enabled and vice versa. -74 Sweep invalid for Noise. -75 Burst count invalid. Upper limit 2147483647. -76 Burst count invalid. Lower limit 1. -77 Trigger period invalid. Upper limit 500s. -78 Trigger period invalid. Lower limit [VALUE]. -79 Arb DC cannot be selected when burst is enabled and vice versa. -80 OUTPUT VOLTAGE OVERLOAD. Output turned off for safety. -81 Invalid entry. High level upper limit [VALUE]. -82 Invalid entry. Low level lower limit [VALUE]. -83 Invalid entry. Amplitude upper limit [VALUE]. -84 Invalid entry. Amplitude lower limit [VALUE]. -85 Invalid entry. Offset upper limit [VALUE]. Invalid entry. Offset lower limit [VALUE]. -86 Phase invalid. Upper limit +360 degrees. -87 -88 Phase invalid. Lower limit-360 degrees.

26 - Appendix 1.

Error messages

- -89 Output load invalid. Upper limit 10000 ohms.
- -90 Output load invalid. Lower limit 1 ohms.
- -91 Frequency coupling cannot be turned on when modulation is enabled.
- -92 Frequency coupling cannot be turned on when frequency sweep is enabled.
- -93 Frequency coupling cannot be turned on. Pulse waveform can only be coupled with Pulse waveform.
- -94 Frequency coupling cannot be turned on when Noise is set as main output.
- -95 Frequency coupling cannot be turned on when DC is set as main output.
- -96 Outputs cannot be coupled when Tracking is selected.
- -97 Amplitudes cannot be coupled when Tracking is selected.
- -98 Frequencies cannot be coupled when Tracking is selected.
- -99 Tracking cannot be selected when outputs are coupled.
- -100 Tracking cannot be selected when amplitudes are coupled.
- -101 Tracking cannot be selected when frequencies are coupled.
- -102 Channel 2 parameters not available when Tracking is selected.
- -103 Invalid entry. Upper limit 99%.
- -104 Invalid entry. Lower limit 1%.
- -105 GPIB address invalid. Upper limit 30.
- -106 GPIB address invalid. Lower limit 0.
- -107 Incorrect password. Please try again.
- -108 Password did not match. Please try again.
- -109 Unsupported USB device. Device current limited to 500mA.
- -110 Unsupported USB device. Please insert USB-Flash disk only.
- -111 Unsupported remote command.
- -112 Unsupported remote command parameter.
- -113 USB HOST hardware not found.
- -114 Please insert USB-Flash disk and try again.
- -115 USB-Flash disk files limited to 1260.
- -116 Please edit different file name as the current file already exist.
- -117 FATAL ERROR: Invalid waveform location.
- -118 FATAL ERROR: Invalid setup location.
- -119 Unsupported waveform file or the file may be corrupted, please wait.
- -120 Unsupported setup file or the file may be corrupted, please wait.
- -121 Unsupported command on the Webpage.
- -122 Unable to Recall instrument setup. The specified location is empty.

26 - Appendix 1. Error messages

-123	Test FAILED at address [VALUE]. Data written [VALUE]. Data read back [VALUE].
-124	PM invalid for Pulse.
-125	BPSK invalid for Pulse.
-126	FM invalid for Pulse.
-127	FSK invalid for Pulse.
-128	Sweep invalid for Pulse.
-129	Finite Burst invalid for frequencies above [VALUE].
-130	Channel 2 parameters not available when channel 2 is set to output channel 1 sync waveform.
-131	Gated Burst invalid for frequencies above [VALUE].
-132	Frequency coupling cannot be turned on when burst is enabled.
-133	Frequency and amplitude coupling cannot be turned on when channel 2 is set to output channel 1 sync.
-134	Tracking cannot be turned on when channel 2 is set to output channel 1 sync waveform.
-135	Channel 2 cannot be set to output channel 1 sync when frequencies or amplitudes are coupled.
-136	Channel 2 cannot be set to output channel 1 sync when channels are in tracking mode.
-137	Channel 2 parameters not available when Tracking is selected.
-138	Invalid entry. Order upper limit 50.
-139	Invalid entry. Order lower limit 1.
-140	Invalid entry. Amplitude. percent upper limit 100.0%.
-141	Invalid entry. Amplitude. percent lower limit 0.0%.
-142	Invalid entry. Phase upper limit 360.0 degrees.
-143	Invalid entry. Phase lower limit-360.0 degrees.
-144	Amplitude coupling cannot be turned on when ASK modulation is enabled.
-145	Amplitude coupling cannot be turned on when DC is set as main output.
-146	Amplitude invalid. Carrier amplitude cannot be less than hop amplitude.
-147	Hop amplitude invalid. Cannot be less than 0 Vpp
-148	ASK rate invalid. Upper limit 10MHz.
-149	ASK rate invalid. Lower limit 2mHz.
-150	Amplitude modulation invalid for carrier frequencies above [VALUE].
-151	Amplitude shift keying invalid for carrier frequencies above [VALUE].
-152	SUM modulation invalid for carrier frequencies above [VALUE].
-153	Feature not available in this model.
-154	Pulse delay invalid. Limited by pulse period.

Error messages

- -155 Pulse delay time invalid. Lower limit Ons.
- -156 Pulse fall time invalid. Limited by pulse width.
- -157 Pulse fall time invalid. Lower limit [VALUE].
- -158 External clock invalid. Switching back to internal reference clock. Please wait.

Warning messages

1	DC Offset set to default 0V.
2	Frequency coupling turned off.
3	Wrong key pressed. Press keys as instructed.
4	Instrument is not calibrated.
5	Calibration values cleared. Please power-cycle the instrument.
6	USB-Flash disk waveform files limited to 1260.
7	USB-Flash disk setup files limited to 1260.
8	Please press again to overwrite.
9	File was created from 1-CHN-Model. Please press again to copy.
10	File was created from LF-Model. Please press again to copy.
11	File was created from different firmware. Please press again to copy.
12	Amplitude coupling turned off.
13	Hop amplitude set to maximum allowed for current carrier amplitude and offset settings.
14	Burst mode turned off to output DC.
15	Frequency changed to maximum allowed for Ramp waveform.
16	Frequency changed to maximum allowed for Arb waveform for current settings.
17	Frequency changed to maximum allowed for Square waveform.
18	Frequency changed to maximum allowed for Sine waveform for current settings.
20	Square symmetry set to default 50%.
21	Pulse parameters changed to maximum allowed for current settings.

Information messages

501	Key test successful.

Waveform manager plus V4.13

Arbitrary waveform creation and management software

The Waveform Manager program allows construction, editing, exchange, translation and storage of many types of waveform data. It is compatible with all Aim-TTi waveform generation products.

Waveforms may be generated by equation entry, freehand drawing, combining existing waveforms or any combinations of these methods.

Data upload and download are possible via LAN, USB or GPIB subject to a compatible GPIB adapter being correctly installed and configured in your PC.

Files can also be uploaded/downloaded to the USB flash drive and the flash drive then used directly with the instrument.

Both upload and download of waveform data are possible.

Text data may be read from the Windows clipboard and used to create a waveform. The text data format is very free and will allow most lists of numbers, with or without intervening text, to be read as waveform data points. Waveform data may also be pasted to the clipboard for insertion into other programs.

Waveform data may also be read from files conforming to the CSV file format.

Waveforms are displayed in fully scalable windows and may be manipulated graphically. Any number of waveforms in any of the supported types may be displayed simultaneously.

On-line help is available in the following three ways:

- The help menu contains a contents option from which you can go to any section of the online help file or browse particular areas or the whole file. It is also possible to use the Index and Find operations of the Windows help system to search for items which are not listed directly in the contents section.
- Some dialog boxes have a Help button which, when clicked, will open the on-line help file at the section containing the description of that dialog box.
- From most windows/dialogues the F1 key will open the help file at the relevant section.

Waveform Manager Plus allows you to keep waveforms for different projects separate from each other on your hard drive. A project may be placed anywhere, in any directory folder and all waveform files for that project will be stored in a structure below that directory. A project is identified by a user defined name. Each project maintains its own library of expressions.

Amplitude Can be sp Amplitude Accuracy: DC Offset Range: DC Offset Accuracy:	ecified open circuit (hi Z) or	1.5% ±5mV at 1kHz into ±10V. DC offset plus sign Typically 1% ±50mV.	50Ω nal peak limited to ±10V from the second sec	om 50Ω.		
Resolution:		3 digits or 1mV for both	Amplitude and DC Offset.			
	nfigured to output Channel					
any of the following.	Alternatively, the user can		carrier referenced, to outp		ger signal or turn it off.	
		\leq 28.125MHz	duty cyclo at the	≤ 62.5MHz A square wave with 50% duty cycle at the		
Carrier Waveform	Sine / Square / Ramp / Pulse / Arbs	A square wave with 50% duty cycle at the waveform frequency.		waveform frequency.	o duty cycle at the	
Sync:		≤ 80MHz A sine wave at the wave	form frequency.	≤ 240MHz A sine wave at the wave	eform frequency.	
	Pattern	A positive pulse which is 1 bit rate wide at the beg		ginning of the sequence		
	Noise	No sync associated with noise.				
	AM/FM/PM/SUM/ PWM	A square wave with 50% duty cycle referenced to the internal modulation waveform when modulation source is internal, or a square wave referenced to the carrier waveform when modulation source is external. No sync is associated with Noise and DC waveforms as the modulation source.				
Modulation Sync:	ASK	A square wave referenced to the trigger rate. The sync is a TTL high when hop amplitude is the output amplitude and TTL low when carrier amplitude is the output amplitude for positive slope and vice versa for negative slope.				
modulation sync.	FSK	A square wave referenced to the trigger rate. The sync is a TTL high when hop frequency is the or frequency and TTL low when carrier frequency is the output frequency for positive slope and vice versa for negative slope.				
	BPSK	-	ed to the trigger rate. The s n carrier phase is the outpu			
Sweep Sync:		A square wave that is a the sweep	TTL high from the beginnin	g of the sweep and a TTL	low from the midpoint of	
Burst Sync:	Internal Trigger External Trigger	A square wave with 50% duty cycle at the trigger frequency.A square wave with same duty cycle and frequency as the external source.				
Triggory	Manual Trigger	A positive pulse which is approximately 18us wide at the beginning of the event.				
Trigger: Output Signal Level:		Selects the current trigg Logic level nominally 3V				
Output Signal Level: Output Impedance:		Logic level hominally 3V 50Ω				

MODEL:	TGF4042	TGF4082	TGF4162	TGF4242
Ref Clock Output				
Buffered version of the 10MHz clock currently in use (internal or external)				
Output Level:	tput Level: Nominally 3V logic level from 50Ω.			

Inputs				
Trigger / Cou	nt (DC) Input			
For ASK, FSK, BPSK, 1	triggered sweep, gated	burst, triggered burst and DC coupled external frequency measurement.		
Trigger Input		DC – 1MHz		
Frequency Range:	Counter Input	100mHz to >125MHz		
		Threshold typically 1.2V;		
Signal Range:		Sensitivity 100mVpp (≤50MHz), 250mVpp (>50MHz)		
		Maximum input +5V / -1V.		
Minimum Pulse Wid	th (Trigger Input):	50ns		
Polarity (Trigger Inpu	ut):	Selectable as high/rising edge or low/falling edge.		
Input Impedance:		10kΩ		
External Mod	lulation Input			
For AM, FM, PM, SU	M and PWM			
Voltage Range:		± 2.5V full scale		
Input Impedance:		5k Ω typical		
Bandwidth:		DC to 5MHz		
Ref Clock / Co	ount (AC) Input			
Input for an externa	10MHz reference clock	and AC coupled external frequency measurement.		
Voltago Pango:		≤50MHz 100mVpp – 5Vpp		
Voltage Range:		>50MHz 250mVpp – 5Vpp		
Maximum Voltage:		+10V		
Minimum Voltage:		-10V		

Interfaces		
Full digital remote control facilities are available	through LAN, USB and optional GPIB interfaces.	
LAN Interface	Ethernet 100/10base – T hardware connection. 1.5 LXI Device Specification 2016	
USB Interface	Standard USB 2.0 hardware connection. Implemented as virtual-COM port.	
USB Flash Drive	For waveform and set-up storage/recall.	
GPIB (optional)	Conforming with IEEE488.1 and IEEE488.2	

General	
Display:	4.3 inch (10.9 cm) transflective backlit TFT LCD, 480 x 272 pixels, 262144 colours, adjustable brightness and contrast.
Data Entry:	Keyboard selection of mode, waveform etc.; value entry direct by numeric keys or by rotary control.
Stored Settings:	Up to 9 complete instrument set–ups may be stored and recalled from internal memory.
Size:	Bench Top: 97mm height; 250mm width; 295mm depth Rack mount: 86.5mm (2U) height; 213.5mm (½–rack) width; 269mm depth
Weight:	3.2kg
Power:	100-240VAC ±10% 50/60Hz ; 100-120VAC ±10% 400Hz ; 60VA max. Installation Category II.
Operating Range:	+5°C to 40°C, 20–80% RH.
Storage Range:	-20°C to + 60°C.
Environmental:	Indoor use at altitudes up to 2000m, Pollution Degree 2.
Options:	19 inch rack mounting kit.
Safety & EMC:	Complies with EN61010–1 & EN61326-1. For details, request the EU Declaration of Conformity for this instrument via http://www.aimtti.com/support (serial no. needed).

For details, request the EU Declaration of Conformity for this instrument via http://www.aimtti.com/support (serial no. needed).

General specifications apply for the temperature range 5°C to 40°C. Accuracy specifications apply for the temperature range 18°C to 28°C after 30 minutes warm-up, at maximum output into 50Ω. Typical specifications are determined by design and are not guaranteed.

EXCELLENCE THROUGH EXPERIENCE

Aim-TTi is the trading name of Thurlby Thandar Instruments Ltd. (TTi), one of Europe's leading manufacturers of test and measurement instruments.

The company has wide experience in the design and manufacture of advanced test instruments and power supplies built up over more than thirty years.

The company is based in the United Kingdom, and all products are built at the main facility in Huntingdon, close to the famous university city of Cambridge.

TRACEABLE QUALITY SYSTEMS

TTi is an ISO9001 registered company operating fully traceable quality systems for all processes from design through to final calibration.

ISO9001:2015

Certificate number FM 20695

WHERE TO BUY AIM-TTI PRODUCTS

Aim-TTi products are widely available from a network of distributors and agents in more than sixty countries across the world.

To find your local distributor, please visit our website which provides full contact details.
