Mosquito Repellent LED

with LED night light

The Gardigo Mosquito-Repellent LED is a repellent plug designed to fend off gnats and midges without using poison. It emits high frequent sounds that are modelled after the buzz of the wings of male mosquitoes. Female mosquitoes that have mated and are now looking for blood in order to breed try to avoid this tone and the places where it can be heard. This is how the Mosquito Repellent LED can help you.

The repellent plug can also be used as night light. Its minimalist, modern design fits in well in any living room.

Additional information
