Mite Blocker

Reduce the number of mites in your furniture and beds

An increase in the mite population is often the cause for an increase of allergic reactions. Especially if the population is high and not reduced over a longer period of time. The problem controlling the mite population lies in finding the actual places where they breed and where the infestation is particularly high. This can be the furniture, but it can also be beds, carpets or other textiles. Here mites feel very much at home and they will leave their droppings in the form of dust. The mite invasion in the house can never be completely prevented, especially when humans are round. A certain basic population is always present. But when the mites multiply in numbers and the populations become uncontrolled, then allergies, such as dust allergy, will

occur more frequently. If the cause of the allergies is not eliminated in the long term, this can become dangerous and even lead to asthma. With the Gardigo Mite Blocker you can prevent the explosion of mite populations and avoid unpleasant allergies, guaranteeing a basic hygiene within the house. The Mite Blocker reduces the invisible, but disturbing problem noticeably within 3 to 5 months. It emits a frequency pulse, which affects the reproductive cycle of mites and reduces their numbers.

Less mites. Less mite droppings. Less problems.

Additional information

- **Dimensions:** 6.5 x 7.3 x 2.5 cm (W x H x D)
- **Packaging dimensions:** 7 x 7.5 x 3.5 cm (W x H x D)
- **Manuals included:** DE, GB, FR, ES, IT, NL, CN
- **Product images, scenery images**
- **Packaging unit:** 10 units per package

Specifications

- **Covered area:** up to 6 m²
- **Frequency impulses**
- **Battery:** 2x AAA batteries (not included)
- **Operating display (LED)**
- **With on/off switch**
- **Continuously variable volume control**
