Snail-Stop Fleece

Virgin wool 80 x 60 cm

Snails and slugs such as the red slug and Spanish slug are known to be ravenous garden pests. Under good conditions they can reproduce rapidly. Slugs feed on healthy plants such as lettuce in your vegetable patch or decorative flowers like French marigold or dahlias.

If you would prefer eating the lettuce yourself instead of being challenged to your food by hungry mollusks, you need to protect your garden. The Gardigo Snail-Stop Fleece will help you with this task. The mat is made of virgin wool and uses a physical mechanism: Its fibers irritate the skin of the slugs and dehydrate them when they move on the surface. The mollusks do not like this and they will avoid the mat.

Simply place the Snail-Stop Fleece over the ground and cut slits through which your plants can grow. Cut the fleece to the required size. Fixate the fleece with pegs, stones or clips if necessary.

The fleece retains heat and serves as frost protection. Since the light only reaches your plants and no longer the weeds on the ground, weed growth is reduced. The Gardigo Snail-Stop Fleece is made of wool and is therefore 100% biodegradable. After approx. 2 years, it can simply be buried in the soil as a fertilizer.

Additional informations

- **Product dimensions:** 80 x 60 cm (W x H)
- **Packaging dimensions:** 40 x 13 cm (W x H)
- **Manuals included:** DE, GB, FR, ES, IT, NL
- **Product images, scenery images**
- **Packaging unit:** 10 untis per package
