## General

D-300G series is the smallest Dual CO2 sensor module in the world. Its Persistent Stability and Temperature Effect Resistance are much favored in warehouse, greenhouse, hospitals etc. besides the small size and consistent accuracy through the life cycle.

Method 1. UART Command Set;   J12: pin-1 (UART-RX) and pin-2 (UART-TX) to Main-Board   (J13: pin-5 and pin-6 are available as well.).

Method 2. I2C Command Set;   J12: pin-3 (SCL) and pin-4 (SDA) to Main-Board. (J13: pin-8 and pin-9 are available as well.)

Method 3. Let Sensor install on Jig Board, **TRB-100ST (Test and Recalibration Board)** with ambient air-flow condition and execute by moving jumper following Manual on the website.

Method 4. Send string command set below to RXD-pin of Sensor on Emulation program.
   EK-100SL (Evaluation kit, with Emulation program 'ELTWSD') is available

Method 5. Execute Hardware based Manual Calibration (MCDL).

MCDL-pin	CAL-1pin (J12:pin-7 or J13:pin-11)	CAL-2pin (J12:pin-9 or J13:pin-13)	Reference Gas	Calibration time
CAL-1	High	Low	CO_2-'400'ppm-N_2-based-gas / Fresh Air	Calibration should be finished in between 10 and 18minutes
CAL-2.	Low	High	CO_2-'0'ppm-N_2-based-gas	

   ※   1. CAL-1pin and CAL-2pin shouldn't have 'Low' at the same time.

2. Be sure to escape MCDL fetch loop between 10 minutes and 18minutes to avoid inappropriate calibration.

Alarm Descriptions

Alarm signal operates as Open Collector type and send TTL on signal since CO_2 measured value beyond 1,000 ppm until it go down to 800 ppm. It is designed to be activated when CO2 measured value surpass 1,000 ppm and deactivated down to 800 ppm to avoid unwanted rapid switching by hysteresis effect.

<div align="center">1,000 ppm ≤ Alarm ON, 800 ppm ≥ Alarm OFF</div>
EK-100SL series is available for customer to enable to change alarm activation & deactivation point.

※Caution

1. Please use only 'PCB' of sensor to avoid the physical shock on sensor without holding Cavity directly. Rough handling or Transportation could result in inaccurate reading..
 But, MCDL with CAL1/CAL2 are available to correct the sensor to normal status.

2. Proper ESD protection during handling is important to avoid electrostatic defect occurrence. The storage of sensor should be insulated as well
