

EXPLORER BOARD

Explorer board for quick and easy experimentation with Raspberry Pi Pico

Our Explorer Board is the easy and efficient way to develop your Raspberry Pi Pico projects.

Since the most important components are already integrated, you save time and effort on wiring. The Explorer Board has a wide range of interface connectors so you can connect your projects to a variety of modules and devices. With the integrated breadboard, you can quickly build and realize your own projects.

Thanks to the possibility to connect or disconnect all modules individually, you can use your pins, which are additionally led separately to the outside, for other projects or experiment on the integrated breadboard at any time.

MAIN FEATURES Functions Fast and efficient experimenting with the Raspberry Pi Pico Raspberry Pi Pico can be plugged in directly All modules can be switched on and off individually

| | Additional integrated breadbo- ard for own developments |
|--------------------|--|
| Integrated modules | 4 RGB LEDs, buzzer, relay, 1.8" TFT display, DHT11 temperature sensor, 4 buttons, breadboard |
| Interfaces | 4x servo motor, SPI, I2C, UART, 5x crocodile clip connector |
| Power supply | 5 V USB-C |
| Compatible to | Raspberry Pi Pico, Raspberry Pi Pico W |

| ADDITIONAL INFORMATION | |
|------------------------|-------------------|
| Dimensions | 219 x 110 x 27 mm |
| EAN | 4250236825878 |
| Customs tariff no. | 84733020 |
| Article no. | RB-P-XPLR |
