

Explosion proof flash light

Item No.: 3334640 (LD2102)

Warning: Charging and using the product, please read the instruction manual carefully and keep it for future use!

Main purpose and scope of application

Miniature strong light explosion-proof flashlight is mainly used for patrol lighting, signal contact and direction indication.

Performance characteristics

1. Aluminum alloy die-casting shell, fully sealed design, good resistance to high and low temperature and high humidity, can be used in various harsh environments;
2. High power and high brightness light source, low energy consumption, long LED life.
3. Reflective cup design, with high reflective efficiency and added stroboscopic function, can be used as a remote signal indicator:
4. High capacity lithium battery, large capacity, long service life, low self-discharge rate, economic and environmental protection;
5. Deep anti-slip treatment on the external surface, light and beautiful, and convenient to carry;
6. The charger adopts chip control charging, and has the functions of constant current, constant voltage charging, overcharge protection, short circuit protection.

Instructions

1. Press the switch button, the working light lights up, press the second strong light to light up, press the switch again, and the light source goes off; after long pressing the switch for 3-5 seconds in any mode, the light source is in a flashing state, which can be used for warning and signal contact.
2. When charging, just plug the output plug of the charger into the charging hole to charge; The charger has a built-in charging protection device. When the charger is connected to the power supply and does not charge, the indicator light is green; When the lamp is connected to start charging, the indicator light is red to indicate normal charging; When the battery is fully charged, the indicator light turns green.
3. Once fully charged, it can be used at any time within 3 months; If it is not used for a long time, it should be charged for 4-6 hours before use.
4. In use, when the battery is about to run out of power, the indicator light of the handle switch will change from green to red, the lamp will enter the automatic flashing prompt for charging, and the lighting brightness of the lamp will decrease sharply or suddenly stop working. At this time, stop using and charging.

Precautions

1. When carrying or transporting, make sure that the button switch is free from external objects to avoid accidental activation causing power consumption.
2. When charging or discharging continuously in a place with high ambient temperature, the lamp barrel has a slight temperature rise, which is normal.

3. Only use the special charger provided by the company for charging; If it is not used for a long time, it should be recharged every three months.
4. It is not allowed to replace the light source, disassemble the structural parts and seals of the lamp.
5. Must use the special battery provided by the company.
