

FIRST FLIGHT

HISINGY EVERYBODY'S DRONE www.HISINGY.com

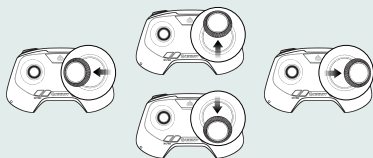

FPV PERFECTIONISM

- 1 Long press the Engine Start button to start the Mini Drone. Push the left joystick all the way up, and the Mini Drone takes off slowly.

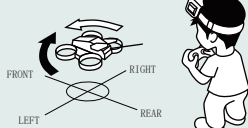

- 2 In the meantime, please focus on controlling the right joystick. Control the forward, backward, left, and right movement with the right joystick and try to hover the

Hovering the Mini Drone is similar to holding a ping pong ball on a dinner plate, to keep the ball in the center, you need to make slight adjustments to the

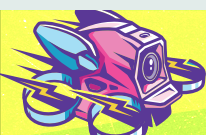

- 3 Note that please keep the taillight facing towards you at all times. If the Mini Drone turns, please push the left joystick left or right to correct

- 4 Hover is the basis of all flight maneuvers. Please keep practicing until it becomes your second nature. It is recommended to master the line-of-sight flying before using your FPV goggles for FPV flying.

The airplane+remote control kit version does not require frequency matching

- 1 When the aircraft is powered on, flip it to the bottom and press and hold the binding button to enter binding mode. When the binding mode is activated, the indicator LED will quickly flash in multiple colors.

- 2 The controller must be in the off state, hold down the function key L1 and long press the power button to activate the binding mode. After activating the binding mode, the controller will continuously flash the indicator light.
(TX50 as an example, TX100 also operates binding)

- 3 After successful binding, the LED light changes to slow breathing mode.
