Stäfa, September 18, 2024

Dear Sensirion Customers

Sensirion is happy to announce that we have an improvement in the Moisture Sensitivity Level of SCD4x sensors.

This Info letter number 243401 announces an update to the MSL rating of SCD4x sensors to Moisture Sensitivity Level 1 from Moisture Sensitivity Level 3.

This specification change is from extensive testing over time and not related to any changes to sensor hard- or firmware, therefore the moisture sensitivity level reclassification is retroactive for all SCD4x parts that have shipped previously.

An updated SCD4x Datasheet available on our Partners Portal here is now released to reflect this improvement.

Furthermore, packaging and labeling will be updated as noted in the attached.

Kind regards  
Sensirion Channel Sales Team
