

Fixing Ties for Hole-Fastening (100 pcs.) Item-No.: 26CA807

This fastening tie, which originated in the automotive industry, can be used to attach objects, panels, covers, and brackets to existing holes. The material to be fastened is guided into a mounting hole and tightened from behind using the button - just like a cable tie. After cutting off the excess, a reliable connection is created that can withstand many environmental and temperature influences. The button has a diameter of approx. 1.5 cm, which provides sufficient contact surface and a secure hold; the mounting hole should not be less than 0.5 cm in diameter. The outer retaining T-shaped bracket measures 2 cm in length, and the total length of the fastening tie is 9.4 cm. The black color is inconspicuous and can be used in many areas.

- Universal fixing tie buckle for securing items to holes
- Ideal for panels, covers, cables, eyelets, etc.
- Pure polyamide material for resistance to environmental influences
- Automatic locking mechanism as with cable ties

Technical Specifications

Material: Polyamide • Color: Black • Mounting: THM (through hole mounting) • Length: 94 mm • Width (strap): 5 mm • Fastening clip: $\varnothing$ 15 mm • Pin: T-shaped head 20 mm • RoHS & REACH compliant • EAN/GTIN: 4262511626230 • Content: Set of 100 pcs.
