

Reclosable Fastener Tape (self-adhesive) 1 m Item-No.: 26CA808, 26CA809

Homogeneous mushroom
head surface

Mushroom-shaped-head technology

The self-adhesive tape features mushroom head technology for secure interlocking, which offers the advantage of low wear and tear combined with high strength. At the same time, the 1 m long section can be easily cut to the required length with scissors. The self-adhesive backing adheres to many smooth surfaces, which must be cleaned and free of grease before installation. After achieving basic strength half an hour after installation, the final strength and full load-bearing capacity are reached after approx. 72 hours. High-quality materials such as pure polyamide and polyester ensure durability and protection against environmental influences.

The surfaces must be clean, dry, and free of grease to ensure optimal adhesion. After 20 minutes, approx. 40% of the adhesive strength is achieved, after 24 hours 80%, and after 72 hours full strength!

- Self-adhesive tape with high-quality adhesive surface
- Mushroom head inner side for stable connections
- Unlike standard H&L tape, no different sides (hooks and loops) are required here
- Very low wear and tear - even with frequent separation
- Can be cut to size with scissors (total length 1 m)

Technical Specifications

Material: Polyamide, Polyester • Color: Black • Connection technology: Mushroomhead • Adhesive surface: 3M quality adhesive • Width: 2,5 cm / 5 cm • Length: 1 m • RoHS & REACH compliant.
