Product Overview

The MIMO-4-4 is a 4-in-1 high-performance, multi-frequency antenna with four cellular antennas within a single housing. The four cellular MIMO antennas offer wideband coverage from 617 to 6000 MHz, covering contemporary LTE/4G and 5G bands for future-proof implementation. The ultra-wideband performance of the cellular antennas allows it to be used across different operators and technologies and is ready for future cellular technologies up to 6 GHz for 5G applications, as well as Wi-Fi applications supporting 2.4 to 2.5 GHz and 5 to 6 GHz.

The MIMO-4-4 exceeds the performance of most competitors due to the attention to the design of this high-performance antenna. All radiating elements' radiation patterns provide an excellent balance between omni-directionality, pattern diversity, and good radiation abilities at the desired elevation. This is an important criterion for the transportation and marine market, which the antenna was specifically designed for. Main applications are for commercial/industrial vehicles, marine, M2M, and other IoT systems using a wide range of radio technologies while remaining futureproof over the wide frequency band.

Antenna Performance Plots

VSWR

Voltage Standing Wave Ratio (VSWR)*

VSWR is a measure of how efficiently radio-frequency power is transmitted from a power source, through a transmission line, into a load. In an ideal system, 100% of the energy is transmitted which corresponds to a VSWR of 1:1.

The MIMO-4-4 delivers superior performance across all bands with a VSWR of <2:1.

*VSWR measured with 2m low loss cable.

GAIN (EXCLUDING CABLE LOSS)

Gain* in dBi

6 dBi is the peak gain across all bands from 617 – 6000 MHz

Gain @ 617 – 960 MHz:	-0.5 dBi
Gain @ 1427 – 1517 MHz:	3.5 dBi
Gain @ 1710 – 2700 MHz:	5.5 dBi
Gain @ 3400 – 4200 MHz:	5.5 dBi
Gain @ 5000 – 6000 MHz:	6 dBi

*Antenna gain measured with polarisation aligned standard antenna on a 600mm ground plane.
