Parts list:

Qty.	Part	Property
1	EPP boat hull	Buoyant and sturdy
1	Low-friction motor	RF300L
1	Propeller	Diameter: 65 mm
1	Motor bracket	Metal
1	Solar cell	50 mA@ 2 - 3 V

You will also need: glue gun

Check and sort out parts!

Conrad No. 1818585

Dimensions:
150 x 70 x 70 mm

GLUE

CAUTION:

The glue coming out of the glue gun is very hot. **Be very careful not to get it on your skin.** If it does get on your skin, immediately cool the area with water and seek medical attention if the glue does not come off on its own. The nozzle on the glue gun also becomes very hot during use. Be careful not to burn yourself on it.

The tough part about hot glue: The glue remains very hot for some time after being applied with the glue gun.

So always wait a good 2 minutes after applying glue to allow the glue to cool down. Then continue.

A Apply hot glue to the spacer, then attach to the hull (approx. 45 mm from the edge). Let cool for 2 min.

B Glue the motor bracket onto the middle of the spacer, let cool for 2 min.

C Slide the motor into the motor bracket and attach the propeller.

D Place the solar cell on top and apply hot glue all around. If the solar place is glued in place clean on all sides, the back of the solar cell will be protected from water.
