

# Pico IO Prototype Expansion Board

## Description

The Pico IO prototype expansion board works with the Raspberry pico board. It can expand IO ports of the pico board. There are two IIC ports, a serial communication interface , three analog ports and six digital ports.

This sensor board simplifies the circuit and makes it easy to connect with commonly used sensors.

You can stack a Raspberry Pi pico board onto this shield.

## Dimension

Length, width and height: 69mm, 54mm, 12mm

Weight: 22.7g
